The FCC is doing a grave injustice by re-allocation of channel 37 to unlicensed operation. This will have a significant financial impact on the healthcare system, specifically hospital organizations, as well as a significant impact on patients health and well being. Unknown interference into this band that was previously allocated to wireless medical telemetry devices can cause vital physiological data to become unavailable to care providers placing patient lives in jeopardy. At the very least, the FCC should clearly identify the boundary zones that protect these fragile patients and not allow any transmission of any device that may cause interference.
