Net neutrality is one of the most important things in our economy. By giving preference to companies able to pay more we are enabling the rich to get richer while the poor are stuck in the gutter. This would deepen the divide in our country and allow the cable and internet companies which already have monopolies in most markets to charge even more leverage to provide a level of service which is widely regarded as the worst across all industries. This is effectively, the same as Citizens United, but for the internet. Please maintain net neutrality and hope for your children's future.
