To whom it may concern:

In reference to the filing of Proceeding Number 14-166 by Shure Incorporated, I disagree with their proposal of limiting both VHF and UHF wireless systems to a maximum of 50mW.

Shure Incorporated occupies an important position in the landscape of wireless usage, however, there are several other notable manufacturers that service a different market that benefits greatly from the flexibility of wireless output power up to the current 250mW limit.

In other words, in this matter, Shure Incorporated does not speak for the entire industry, just for their particular marketshare.

Sincerely,
John Blankenship, CAS
