The requested action for this merger to be accepted - includes the objective that AT&T enhance/increase its fiber optic transmission lines in areas of the United States.

It is my objective as a RURAL citizen of the New England area of the US - New Hampshire - that the objective to increase fiber optic CONCENTRATE on the underserved; non served - areas of Rural USA - i.e. Cornish, Sullivan County, NH - with better access to high speed internet - via fiber optic.

In the past - the FCC and the US Govt have concentrated their efforts on already served Urban areas of the US - to the exclusion of underserved and nonaccessible Rural areas of the US.

I hope that your findings and requirements in Proceeding No. 14-90 will include RURAL areas of the US - which is where DirectTV has a presence - but NO HI SPEED INTERNET is accessible.
