Hello,

Small Wireless ISPs NEED a way to get their own spectrum at a fair price. We are falling behind quickly in the world market for consumer broadband. I server rural areas and these people need something better than dial-up or excessive start-up costs for wireless broadband.

I, as a parent, got into the WISP business because our children NEED broadband to compete in the future world market. Where I live the ILEC will not sell to ISPs nor will the local government who charge $400.00 to start an account and $75/month. Please let smaller companies like mine, $30/month/$60.00 installation, to give our future, our children a chance in the brave new world economy.

Thank you for your precious time,
Levi Patrick II
