Re: Terrestrial Use of the 2473-2495 MHz Band for Low-Power Mobile Broadband Networks; Amendments to Rules for the Ancillary Terrestrial Component of Mobile Satellite Service Systems, IB Docket No. 13-213, RM-11685

Dear Ms. Dortch,

Every technology solution begins with a problem. In the case of Globalstar’s NPRM, we the consumers in the United States are the problem. We have a voracious appetite for Wi-Fi bandwidth that is not currently being met. Globalstar seeks to solve this problem by opening more Wi-Fi spectrum for public consumption.

I understand that there may be some issues in the implementation of Globalstar’s TLPS but the positives far outweigh the negatives. If you are building a highway and encounter a river you do not quit building the highway. You either build a bridge over the river or a tunnel under the river. The objections raised by the special interest groups in this proceeding are nothing more than ‘rivers’. They are an opportunity for innovation and should never be used as an excuse to delay the proceeding.

I am respectfully requesting that the FCC approve Globalstar’s NPRM with due haste. The need for Wi-Fi bandwidth is dire and Globalstar’s solution is a unique opportunity to alleviate this need.

Respectfully,
Vanessa Lovisa
