RE: **Ex parte filing** in WC Docket No. 10-90

Dear Ms. Dortch:

On April 13, Clover McNeil from Arctic Slope Telephone Association Cooperative (ASTAC) and the undersigned as well as Jeff Smith from GVNW Consulting, Inc. (by teleconference) conducted an ex parte meeting with Daniel Alvarez from Chairman Wheeler's office and Carol Matthey and Alex Menard from the Wireline Competition Bureau.

We discussed several key points from the March 19, 2015 letter from NTCA CEO Shirley Bloomfield to Chairman Wheeler that detailed the overwhelming rural industry consensus on the need for rural support mechanisms to be updated for the broadband platform in the very near term to the baseline proposal from NTCA, WTA, ERTA, and NECA that would achieve long overdue equity in the support sphere for carriers whose customers order only a data connection.

We discussed the impracticality of establishing a federally tariffed rate for backup power, as addressed on pages 12-14 of the GVNW comments that were filed on February 5, 2015 in the Tech Transition docket (GN Docket No. 13-5).

We also reviewed the steps that ASTAC is engaged in to increase available broadband and bring advanced wireless service to their customers and reviewed the need to recognize the special circumstances that create higher than average costs for carriers such as ASTAC and the entire subset¹ of rural carriers serving high cost territory.

¹ For carriers in Alaska that provide service to one of the most resource-rich areas of our country that helps fuel the national economy, this service is provided in an environment that in many places lacks a road system, commercial power and is impacted by extreme geographical and climactic challenge. Two examples in Alaska include both Copper Valley that serves territory that includes the most expensive portion to construct of the Trans-Alaska Pipeline System (TAPS) and ASTAC that serves an area larger than 40 states, so neither are an average cost endeavor. Nor is providing broadband in these areas an average cost project under any metric.
