NTELOS ANNOUNCES NEW NATIONWIDE 3G UNLIMITED CALLING PLANS

Spokesperson says it's the same nation, but at a better price

WAYNESBORO, VA – March 2, 2010. nTelos Wireless announced today that it has introduced new nationwide 3G unlimited calling plans that are far more affordable than what the big national carriers are offering.

"As a leading wireless provider in the markets we serve, nTelos has offered customers unlimited calling plans for more than a decade," says nTelos Wireless President Frank Guldo. "Now, our customers have access to the same nation, but at more affordable prices. Our new nationwide 3G unlimited plans are value packed – offering the same services, coverage and 3G speeds as the big carriers – but at substantial savings of nearly \$500 a year."

The new nationwide 3G unlimited plans, which became available on Thursday, February 25, start at \$49.99 per month for nationwide 3G unlimited talk. This compares to \$69.99 for similar plans offered by larger national carriers like AT&T and Verizon.

nTelos's new nationwide 3G unlimited talk and text plan is available for just \$59.99 per month, compared to \$89.99 plans from bigger carriers. That's a \$360 savings. And nationwide 3G unlimited Smartphone plans, which give customers the ability to talk, text and surf the web, start at only \$79.99 per month, a monthly savings of \$40 and an annual savings of \$480.

"The new nationwide 3G unlimited plans reflect our continued commitment to provide customers with nationwide, no-worries wireless service at a price they can afford," said Guldo. "That's why these plans are perfect for wireless switchers that are looking for savings without sacrifice. And to guarantee it, we offer a risk free 30-day money back coverage guarantee. You'll find it's the same nation, at a better price."

The new plans can be ordered at nTelos's retail stores, online at www.nteloswireless.com, or by calling 1-888-427-8858.

nTelos wireless Announces The HTC Desire

The Company's third Android-powered Smartphone features one of the world's richest media experiences

Waynesboro, VA (October 25, 2010) – nTelos wireless proudly announces availability of the HTC Desire™, one of the most advanced Android™-powered touchscreen smartphones in the world. The high-end smartphone is *exclusive* to NTELOS in many markets.

The Desire features a superfast, 1 GHz Qualcomm Snapdragon processor that encourages easy and seamless multi-tasking, the Android™ 2.1 platform and access to more than 80,000 applications on Android Market™. The Desire also includes the latest HTC Sense™ experience and a 3.7- inch Super TFT screen.

The device features built-in Google mobile services, including Google Search™, Google Maps™, Gmail™, YouTube™ and Google Maps Navigation™ BETA with voice-aided, turn-by-turn directions.

“We’re thrilled about adding the HTC Desire to our expanding line-up of Android-powered smartphones,” said Conrad Hunter, president of nTelos Wireless. “This is a great addition to our smartphone line-up and takes Android to a whole new level. The HTC Sense user interface optimizes the rich media experience for our customers for viewing news, sports, gaming, the mobile web, music, video or movies.”

Following on the heels of nTelos wireless’ introduction of the HTC Hero™, its first Android-powered touchscreen smartphone, and the recent release of the side-slide Motorola Milestone, the company is poised to become one of the leading providers of Android-powered smartphone devices to consumers and businesses. In addition to the HTC Desire, the Waynesboro, Virginia-based wireless communications provider plans to introduce its fourth Android-powered smartphone before the holidays. HTC Desire highlights include:

Highlights:

- Slim, stylish design
- Fast 1 GHz snapdragon processor
- 3.7 inch 800 x 480 super LCD touchscreen display
- Pinch to zoom with capacitive touchscreen and haptic capability
- HTC Sense™ with 7-panel home page and widget support
- 512 MB ROM memory
- 5 megapixel camera with autofocus and a single LED flash
- 720p video capture
- Powered by Android 2.1 mobile operating system
- 8 GB micro SD memory card preinstalled (expandable to 32 GB) for storage of your favorite music, pictures and video
- Wi-Fi 802.11n capability
- E-mail, Facebook, SMS and more organized by person – not technology
- Bluetooth 2.1 with A2DP Stereo and 3.5 mm headset jack
- Digital compass, G-Sensor, Proximity sensor, light sensor
- Integrated GPS

About NTELOS

NTELOS Announces it will Launch an Android-Powered Smartphone: the HTC Hero

NTELOS' new Android™-Powered Smartphone Will Give Consumers Access to Thousands of Applications, The Company's 3G Network, and Worry-Free Wireless Service

Waynesboro, VA. – October 30, 2009 – NTELOS, a leading provider of wireless communication services to consumers and businesses in Virginia and West Virginia announced plans today to launch its first Android-powered smartphone, the new HTC Hero™. The company is among the first U.S. wireless carriers to announce the availability of the highly acclaimed Android-powered device with Google™ mobile services.

"We are excited to offer this industry-changing platform," said Jim Hyde, Chief Operating Officer for NTELOS. "NTELOS is committed to providing our customers a worry-free wireless experience with coverage they can count on, local, best in class service, no surprise billing and a great selection of devices. The HTC Hero is a great handset for people who want to express themselves and stay connected in a truly unique and revolutionary way."

Android-powered devices represent one of the fastest growing device segments in the wireless industry with worldwide sales expected to soon eclipse the most popular smartphones on the market today, according to a March 2009 report by Informa Telecoms and Media, a London-based research house specializing in the mobile, broadband and television industries.

With Android's innovative and open source mobile platform and applications, an advanced web browser and stylish design, the HTC Hero sets a new standard,

not just in look and feel, but how it delivers performance. The pinch zoom controls allow you to look closer, read easier and surf with more fun.

The HTC Hero, based on the Android platform, developed by the Open Handset Alliance™ of more than 40 global mobile industry leaders, will allow consumers access to thousands of the latest and most relevant wireless applications. The HTC Hero also has built-in Google mobile services with synchronization, including Google Search™, Google Maps™, Gmail™, Google Talk™, and YouTube™.

With Android Market™ users can download thousands of applications, games and widgets on their phone. Twitter, Pac Man, amazon.com, Pandora, CraigslistChecker, and Facebook® are among the countless applications already available. The popular My Location feature allows a subscriber to push a button and see where they are on a map, then search and find the closest area businesses. Or select Google Maps which provides turn by turn directions and traffic updates.

The intuitive experience provided by the HTC Hero allows you to personalize your home screen with widgets to match your personality. You can create and switch scenes that reflect different moments in your life. Your album won't just be the photos on your phone but instead becomes the gateway to online collections on Facebook® and Flickr™.

The Applications

The Android open source platform, which includes Android Market™, an open marketplace for applications, will give customers access to more than 12,000 of the latest applications they want and need, and is growing at a phenomenal rate.

Applications are easily discovered while browsing categories including social, games, productivity, news, finance and lifestyle. The HTC Hero allows multiple applications to be downloaded simultaneously over the nTelos 3G network.

The Features

Android is an open platform which enables manufacturers from around the world to develop unique user interfaces. HTC Hero is built with a user interface based on the HTC Sense™ philosophy. This user experience creates personalization through fully customizable home screens. It also integrates social networking applications into the experience with its Twitter® widget and seamlessly ties in Facebook® and other social networks into people's contact cards.

Additionally, this Android-powered smartphone gives customers the flexibility to upgrade its memory with a microSD memory card, so they can easily add more memory without having to purchase a new device.

The fully-loaded smartphone also features a 3.2 inch HVGA touch-sensitive display with Wi-Fi capability, GPS with digital compass, accelerometer, 3.5 mm stereo headset jack and a 5 megapixel autofocus camera and a camcorder with expandable microSD memory. HTC Hero features simple personal and business e-mail accessibility with instant messaging and text messaging, as well as Stereo Bluetooth® 2.0 Wireless technology.

nTelos Wireless to Offer Two New HTC™ Smartphones *Android and Windows Phone 7 Devices to be Released*

WAYNESBORO, VA – Virginia-based nTelos Wireless, known for providing high-speed, dependable nationwide coverage and the best network satisfaction guarantee in the industry, is continuing to expand its handset line-up with the addition of the Android-powered HTC Merge and the Windows Phone 7 HTC 7 Pro. The handsets will be available online and in all nTelos Wireless retail locations by June 30.

"We strive to provide our customers with affordable, innovative phones to meet all types of lifestyles and individual needs," said Conrad Hunter, president of nTelos Wireless. "We are always excited to release new phones to help customers stay connected and ensure they have a productive, enjoyable mobile experience right at their fingertips."

The HTC Merge features both an on-screen and slide-out QWERTY keyboard. It also features Peep, HTC's integrated Twitter client that lets users tweet, and read and receive tweets from their Twitter account. The Android phone supports Adobe Flash Player so users can play games, watch videos and experience the web with high-resolution graphics. Over 200,000 apps are also available to users through the Android Market.

The HTC Merge operates on the Android 2.2 Operating System with the HTC Sense Experience and features a high-resolution 3.8-inch touch screen. Other functions include a 5 mega-pixel camera with auto-focus and High-Definition video-capture, and an internal antenna to allow users to listen to FM Radio.

The HTC 7 Pro runs on the Windows Phone 7 Operating System with a 16GHz processor. This enables users to utilize the "Glance and Go Experience." This unique feature displays information such as Facebook updates, Twitter posts and emails, all on one screen in the form of easy-to-read tiles. HTC 7 Pro users have instant access to apps, games and music through the Windows Marketplace.
