

**These are my comments on FCC KDB-718828**

There are many acronyms used throughout the document, such as EBW, RBW, etc, that are spelled out at their first usage, but a tabular listing in one place for all the acronyms would be very useful. Also, I did not see UNII spelled out anywhere.

On page 10/11 "Applicability of 15.35(b) and 15.35(c)", there is a term -41.2dBm, but no clue where it comes from or why it is used here. Some explanation is needed. It appears to somehow be related to the previous page 8/11, where "15.209(a)" also uses -41.2 .
