

Project Description

Lockheed Martin is seeking to perform testing on a Low Frequency Sensor (LFS) radar that will be used for long range detection. The testing will evaluate the sensor detection performance and antenna characterization of the radar. The results will be used for further development of the LFS radar. The testing is planned to begin Oct 31st, 2011. It is noted that Lockheed Martin was previously authorized for the same frequency range and power levels under Call Sign WA2XKE.
