

Narrative

AirScan by use of this experimental license will be able to demonstrate/test our state-of-the-art airborne surveillance and security operations for government and private service customers.

Transmissions will be from the aircraft flying approximately 65Km around our facility to a receive ground-station omni-antenna. We will utilize IMT and BMS transmitters to the ground station.

These tests/demonstrations will allow AirScan to continue to maintain and improve its services for Homeland Security.
