

Additional Ground Station

The NASA Wallops Flight Facility 18 meter parabolic UHF dish has been added as a ground station to support Cosmogia's Dove 1 and Dove 2 experimental satellite missions, both of which are scheduled for mid-April 2013 launches. The Wallops site will be supporting the initial commissioning phase of the Dove 1 and Dove 2 missions, allowing for basic TT&C functions over the UHF radio link.

Wallops has submitted an STA with the NTIA to obtain authorization for these activities.
