

EXHIBIT C - END USER DEVICES

For clarification, the maximum power figures provided in Exhibit B reflect the maximum power of eNodeBs (also known as access points or base stations) that will communicate with End User Devices (EUDs). The maximum power for EUDs will be lower:

Maximum EUD Conducted Power	Maximum EUD EIRP	Maximum EUD Antenna Gain
1 W (30 dBm)	0 dBW (30 dBm)	0 dBi

The lists of antenna manufacturers, device manufacturers, range of antenna gains, emission designators, and other details provided in Exhibit B include specifications for both EUDs and eNodeBs.
