To Whom it May Concern,

I am a physician-scientist at Massachusetts General Hospital and Harvard Medical School. Our laboratory studies the physiology of epilepsy and other neurological diseases. Part of that research involves the development of new devices for measuring neural activity. We are moving toward the use of such devices which have wireless capabilities in order to decrease the difficulty of making recordings including a decrease in the risk of infection as well as ease of use for caregivers.

I am applying for a Medical Testing Experimental Radio License in order to fully comply with FCC rules and regulations in testing these medical devices in the hospital setting.

Given our role as a health care facility and the nature of the devices we are building and testing, I believe we are eligible for such a license.

Of course, if you have any questions or concerns please do not hesitate to contact me.

Sincerely,
