

City of Las Vegas has deployed several DSRC roadside units (RSUs) within the City's Innovation District to develop and advance connected vehicle technologies. Users of the existing DSRC RSUs include private sector autonomous vehicle technology companies. It is intended to install and activate (25) RSUs with the CV2X communication. The intent of activating the CV2X communications is to evaluate the cellular communication, safety elements, understand integration needs, and begin transition to the new cellular network.
