

30 July 2021

180 Admiral Cochrane Drive, Suite 300, Annapolis, MD 21401

**Subject: Intended Use of Frequencies**

Aviation Spectrum Resources Inc.

Leonardo Helicopters requires the use of VHF band frequencies 129.95 and 136.7 MHz to complete aircraft ground testing and ensure proper functionality of on-board aircraft radios. The use of these frequencies is intended to be for ground testing only, with each aircraft being a maximum of 1,000 feet from the fixed radio base station. The tested aircraft will be grounded, on the site of Leonardo Helicopters in Philadelphia, PA. These frequencies will be transmitted over via voice communication.
