

### DESCRIPTION OF OPERATIONS

Lockheed Martin Corporation ("Lockheed Martin") hereby seeks authority under Part 5 of the Commission's rules to permit it to demonstrate the Indago UAS platform. Operations will be conducted in and around the Cedar Valley Airport. These tests are in support of deliveries to the United States Army (U.S. Government contract number SPE8EL21F169H). Maximum altitude of operations will be 400 feet, using FAA Part 107 certified pilots.

Lockheed Martin coordinated the use of this frequency with the MAG Chair, who assigned it specifically for this area of operation.
