

Robert Bosch LLC
Request for Grant of Experimental License
File No. 0146- EX-CN-2022
Narrative Exhibit Describing Operation

This application, filed by Robert Bosch LLC, an international manufacturer of tools, automotive equipment, and industrial and consumer products, requests experimental license during a twelve-month period beginning on or before March 1st, 2022 and ending twelve months later, to permit development and testing of a device that will permit vehicle maintenance. Bosch is developing a trial product to sense sections of a vehicle. Therefore Bosch is planning to conduct pilot test runs in the field in the areas requested in the test license. The device supports connectivity using commercial mobile networks in the area. Communications for this connectivity will be commercially provided through Vodafone partnered with AT&T or another commercial service provider for this series of experiments using SIM cards from the local commercial mobile service provider. **Bosch will not be using spectrum in the cellular bands that is allocated to any commercial service provider other than through a commercial service provider (in this case Vodafone partnered with AT&T), so no interference on those allocations can arise to any other carrier from the use of this device.** Specific frequencies will be determined by the network operator only. There will be no RF signals transmitted without the SIM card from the commercial service provider. The product uses network data services provided by the commercial service provider to transfer information to the server. This system is capable of using LTE and Bluetooth

The purpose of this experimental license is to evaluate the product in the field; to collect data for analytics in the field; develop applications for this device and explore different use cases by incorporating it in various vehicles; and to improve product implementation during this pilot phase. All of the experimental devices will be retrieved by Robert Bosch LLC from all test vehicles upon completion of the operation.

The bands sought herein are as follows:

LTE Band 2: 1850 to 1910 MHz & 1930 to 1990 MHz
LTE Band 4: 1710 to 1755 MHz & 2110 to 2155 MHz
LTE Band 5 : 824 to 849MHz
LTE Band 12: 699 to 716 MHz
LTE Band 12: 729 to 746 MHz
Bluetooth – 2400 to 2483.5 MHz

We request to use a maximum of 100 devices in below mentioned cities. At a time maximum 100 device will be used in the field (either in one city or in different cities from below list). Device will not be tested in all cities at same time.

List of Cities : Sunnyvale (California), Plymouth (Michigan), Brooklyn (New York), Los Angeles (California), Chicago (Illinois), Houston (Texas), Phoenix (Arizona), Dallas (Texas), Washington (Dist of Columbia), Philadelphia (Pennsylvania), Miami (Florida), Atlanta (Georgia), Boston (Massachusetts), Seattle (Washington)

There will also be a GPS receiver included in the product.

Neither the composite product nor its components is certified in the United States as of yet. Hence the need for the experimental license for this pre-production testing, evaluation, data gathering, and development of applications/use cases for the device.

The Stop Buzzer contact in the United States for Bosch for this test series at all locations will be Sooraj Satheesh Chandralal of Bosch, whose mobile phone number is 248-302-9059 and whose e-mail is sooraj.satheesh@us.bosch.com. Should any interference arise or be complained of by any entity during the event, all operation will cease until the interference complaint is resolved to the satisfaction of the complainant.
