

Public Interest Statement & Description of Proposed Operations

Net Ops Communications, LLC (“Applicant”) is seeking authorization to enable testing of certain Cambium Networks radios for optimal configuration in wireless networks. This proposed operation will lead to determination and elimination of harmful defects in order to ensure safe and efficient devices are manufactured and sold to wireless providers. Applicant’s proposed program of testing will contribute to the development, extension, expansion, and utilization of the radio art, along lines not already investigated. Applicant will be testing the subject hardware for full compliance measures as well as testing for gull capabilities and defects that may cause harm to the 6 GHz environment as it expands, and wireless providers seek to purchase the subject equipment.

The public interest will be served by granting this authorization as Applicant’s testing will help ensure a safe and responsible ecosystem for all users in the 6 GHz space.
