

FCC application 0776-EX-CN-2022

Exhibit - Question 7

Aerostar Technical Solutions is seeking a license for the ongoing development of F25 and High Pointer 250 radars which are portable, high-performance, low-power, multi-purpose doppler based radar for land, air and maritime applications for acquisition and tracking of low RCS targets out to and in excess of 10km. Our experimentation requires the periodic activation of the radar to support ongoing testing and development of our radar technology. The program of experimentation will contribute to the development of improved detection and tracking capabilities.
