Application Narrative for Proposed Equipment

Proposed Program

We are requesting use of a GPS repeater system at our manufacturing facility in Milford, NH. We are integrating GPS tracking into a number of our watercraft models, and our engineering team needs a reliable GPS signal in the testing areas of our production line. They will be conducting testing and research on the GPS location data and integration into the watercraft navigation system. Their testing will help us further develop the GPS accuracy, overall integration into our watercraft's operation systems, and ensure our customers can safely use our watercraft.
