Dear person(s) in charge,

I certainly received your official permission through the ELS.  
I appreciate your cooperation.

However, I just would like to make sure why its frequency description is slightly different from my original application form 442.

Below is the extract of granted frequency band:

And here is my original application I submitted before:

As you can see, the second one seems to be revised as "1847.5 MHz" from "1845-1850 MHz."  
From a technical perspective, there is no problem as 1847.5 is just a center frequency of submitted frequency bandwidth.

If you have any particular reasons or concerns why you needed to amend only that portion, please let me know.

Best regards,

Samuel Z Okawa
