

## **Exhibit**

Applicant seeks a new license for 698MHz to 952MHz range. These spectrum bands are currently licensed under our license KM2XBI. We are removing them from KM2XBI and filing them as a separate application based on the OET's recommendation. We want to continue to use the license to conduct Proof of Concept trials to identify new technologies and innovations.

The experiments using this license will provide valuable information to optimize next generation cloud native architectures and technologies, support trustworthy, secure, and scalable applications, new use cases, e.g., sensing, and multi-Gbps throughput for cellular users in several bands of 698MHz – 952MHz range.
