

Experiment Name: D-02: Quick Deploying LTE Microcell Networks using Ad-hoc Mesh Technology

Organization: Beamlink

POC: Aprad Kovesdy

Congratulations! We are happy to announce that your experiment proposal has been accepted for the Joint Interagency Field Experimentation (JIFX) 23-2 Event. This event will take place 6 – 10 February 2023.

The JIFX team leads experimentation in alternative methods to enable rapid technological development by cultivating a community of interest and hosting broadly scoped quarterly collaborative field events which enable DoD, US government, and allied stakeholders to identify, influence, and accelerate early-stage technology development that address national and collective security challenges. Your experiment proposal has been reviewed by JIFX Stakeholders from across the United States Government and has been determined to meet the mission listed above.

The next steps are critical to ensuring your success at the JIFX event. You will need to work with the JIFX team to obtain any additional approvals for the elements of your experiment such as aircraft, frequency use, hazardous materials, lasers, etc. For your experiment proposal, you will need to obtain FCC approval to operate your devices at Camp Roberts California National Guard Post. The JIFX team will contact you separately if any additional information is needed.

The JIFX team will host **weekly experiment coordination** calls leading up to the event. These calls will take place on Wednesdays at 1100 Pacific Time on Zoom for Government. The calls will take place on 1/18, 1/25, and 2/1. Please ensure that a representative from your experiment participates in these meetings. Dial-in information is provided below:
