

Description of Experimental Program

The Commission designated additional spectrum for unlicensed operations, envisioning its use for “new innovative technologies and services that will advance the Commission’s Goal of making broadband connectivity available to all Americans, especially those in rural and underserved areas.” Unlicensed Use of the 6 Ghz Band, 35 FCC Rcd 3852,3853 (2020). Through this application of an experimental license, United Wireless Communications, Inc. seeks to advance these goals by testing available equipment across the UNII-5 band for potential delivery of enhanced fixed wireless broadband services.

The experimental operations will involve field deployment and testing of Mimosa Network’s 6 Ghz radio technology on towers in southwest Kansas. These operations will evaluate the greater throughput capabilities available in these bands using 80 mhz channels. The program will also use up to 200 remote units at customer locations.

United Wireless data collection program will operate without causing harmful interference to incumbent users. United Wireless will work with the any nearby licensed incumbents that it identifies, based on information provided in the FCC’S databases, to ensure that its operations will avoid any harmful impact on such existing users.
