The MITRE Corporation is a not-for-profit Federally Funded Research & Development Center (FFRDC) that assists the U.S. government with scientific research and analysis, development and acquisition, and systems engineering and integration. The SATCOM and Network Research Laboratory, located in Colorado Springs established in 1998, evaluates commercial communications technology for implementation in Department of Defense applications. This work is performed under Air Force contract FA8702-23-C-0001.

The MITRE Corporation researches, purchases, and evaluates commercial equipment to include modems, amplifiers, multiplexers and VSAT networks for U.S. government applicability. As part of ongoing evaluations MITRE leases satellite bandwidth to perform over-the-air research and evaluations of the commercial equipment and requires FCC licensing. The MITRE Corporation has been performing these evaluations since December 2001 and will continue into the foreseeable future.
