To Whom it May Concern,

This document is to provide insight for the Exhibit Information portion of the submitted STA application. The Counter-Unmanned Aircraft System (C-UAS) program researches, evaluates, and documents CUAS systems which provide warning capabilities for worldwide diplomatic facilities against UAS threats. This is to enable the mission to provide a safe and secure platform for the conduct of U.S. foreign policy through the protection of life, property, and information. This is done by providing real-time awareness, early warning notice, defeat, and reporting capabilities of Unmanned Aircraft Systems (UAS) for Department of state personnel, facilities, and classified material globally. Xator Corporation supports the U.S. Department of State with diplomatic security services at their embassies abroad. The licensure request will be used to support the operational training, troubleshooting and maintenance of RF systems. Additionally, Xator will periodically evaluate systems for potential fielding. Our primary site for training and operational assessments will be conducted out of our Summit Point Training Facility in Summit Point, WV.

Very Respectfully,
Rome A. Johnson
