

Attachment 4
Block C.11.b
Subject: Affected region

Polylingual Experimental Terminal (PEXT) is a relay station that will communicate with commercial relay satellites and Tracking and Data Relay Satellite System (TDRSS) located in LEO, MEO, and GEO. This notification is only to cover operation for PEXT; notification for commercial relay satellites and TDRSS will be covered under their own filings. Hence, PEXT will only communicate with other satellites in same or higher orbit, therefore does not have affected region on Earth.
