

Modification Description

Microsoft seeks to modify its existing experimental license, call sign WO2XKW, to make the following changes:

1. To add two new channels of operation: 275.5-330 GHz and 117-148.5 GHz with the technical parameters specified on Form 442.
2. To correct the emissions designator previously supplied for operations between 275.4-275.5 GHz. The correct emissions designator is 100MD1D as reflected on Form 442, as modified.

No other characteristics of the proposed experiment would be changed. All testing will continue to occur indoors at low power levels.
