

Directional Antenna Information Sheet

Ground Station Directional antennas used in Sceye flight operations include the following:
S-Band (2460 MHz)

1. Width of beam in degrees at the half-power point: 6 degrees
2. The horizontal orientation is variable because the antenna is on an azimuth-elevation (2-axis) rotator
3. The vertical orientation is variable because the antenna is on an azimuth-elevation (2-axis) rotator
