

For this project we are planning on using up to 5 uas (mobile up to 400ft agl) and 5 fixed/mobile (they will be taken down everyday) antenna within a radius of 60nm (111km) of Kloten, ND. We're anticipating this whole project to be finished in under a month. Attached are screenshots of the coordination request that has been approved by the FAA. One is coordination is for the uas's airborne receiver/transmitter and the other is the ground based antenna. We completed a similar project with the Honeywell Corporation last year (file#0020-EX-ST-2023). Thank You.
