Notification of Launch and Deployment

In accordance with condition 4 of experimental license WN2XPI, Orion Space is providing this notification to the FCC of the successful launch and deployment of the RROCI-2 experimental satellite on March 4, 2024.

The radios onboard the RROCI-2 satellite have begun operations in accordance with WN2XPI.

The launch provider, SpaceX, released the RROCI-2 satellite so that the actual orbital altitude average is 592 km, rather than the 590 km specified on the license. In addition this update, Orion Space is submitting an updated SpaceCap file with the new parameters. This will allow for an updated notification to be provided to the ITU.

Should any radio operations be discontinued or any other changes occur with regard to the satellite operations, Orion Space will provide another update.

If there is any additional information needed, or if there are any questions, please contact Anne Cortez, counsel, 520-360-0925 or anne@washingtonfederalstrategies.com.
