Re: *GN Docket No. 23-65; IB Docket No. 22-271; ELS File Nos. 0661-EX-ST-2024*

Dear Mindel:

I am writing to follow up on our multiple requests to coordinate operations over the past six months. We are surprised by Omnispace's unwillingness to respond to our requests. Could you please let us know if Omnispace's position is that as a licensee of Papua New Guinea, it is not required to follow ITU or FCC requirements to coordinate in good faith? As Omnispace stated, "The FCC does not tolerate failures to coordinate with potentially affected operators."

SpaceX is also extremely concerned about statements Omnispace made to reporters that it has "empirical evidence" of interference from SpaceX.¹ While SpaceX is ready to evaluate your claim, it appears that Omnispace has not made this empirical evidence available. In addition to commencing coordination with us, could Omnispace please place its empirical evidence of interference on the public FCC record so that Commission staff and SpaceX can better understand Omnispace's claim? Omnispace also told reporters that the interference was "to the degree that services cannot be provided." Could Omnispace also place on the public record evidence of its actual service and service interruption? SpaceX has been unable to find any evidence that Omnispace provides service to date.

SpaceX remains ready to commence coordination as soon as we hear from you. Consistent with Commission disclosure rules, we will file this correspondence in the FCC record.

Sincerely,

/s/ David Goldman
