## **Application Narrative for Proposed Equipment**

### **Proposed Program**

Gulfstream is proposing GPS, Iridium, and INMARSAT within their aircraft manufacturing building for testing purposes.

We plan to incorporate GPS, Iridium, and INMARSAT retransmission systems to allow for controlled testing and experimentation during the manufacturing process. These systems allow us to research, test, and enhance existing aircraft capabilities. The indoor signals will also be used for further design and development of new GPS, Iridium, and INMARSAT applications as prototypes that we can incorporate into future aircraft models.
