

Exhibit 1

By this application, Applied Information, Inc. seeks experimental authority to operate certain modular cellular vehicular-to-everything (C-V2X) prototypes for purposes of testing, development, and evaluation. Operations would occur in the vicinity of Houston, TX.

The proposed testing areas provide a diverse range of topography, flora, seasonal weather, construction and other potential interferences to radio communications. The C-V2X radios will be operated throughout the specified area to test, develop, and evaluate C-V2X vehicle communications, transportation infrastructure communications, and chip prototypes in real-world scenarios in anticipation of wider-scale deployments following adoption of final rules for C-V2X.

Under these testing conditions, Applied Information will own the C-V2X equipment, which will be operated by our road-operator test partner, TX DOT - Houston. At the end of the testing period, the equipment will either be retrieved, rendered inoperable or labeled in accordance with the Commission's rules should any final rules for C-V2X go into effect during the license period.
