ACCESS SERVICE

19. LAN Advantage19.4 Rate Regulations

The customer must subscribe to the initial port in order to subscribe to an additional port. If the initial port is terminated at a customer's location, then all LAN Advantage service will be terminated at that location unless customer wants to re-specify one of the additional ports as the initial port with the appropriate rates applied. An additional port can be terminated without terminating the initial port to a customer's location.

Additional port discounts do not apply to different customers at the same location.

Customer may move the location of its LAN Advantage service to a location where sufficient central office capacity and outside plant facilities are available and retain the current monthly rates, but initial nonrecurring charges will be reapplied. The termination charges specified in Paragraph 17, are applicable if Customer terminates because of a move to a location where sufficient central office capacity or outside plant facilities are not available.

Customer has the option of purchasing route Diversity. There are 3 types:

- Diverse Route - Same Central Office. Separate routes from the Customer premises to the Central Office. (C)
- Diverse Central Office - Shared Central Office - Separate route from Customer premise passing through the serving Central Office and terminating in an alternate Central Office. (C)
- Diverse Central Office - Separate path to separate central offices. (N)

Customer has the option of providing their own premises Equipment or purchasing the Premises Equipment from the Company. Rates are shown in Section 19.5 following.

Customer has available option of purchasing redundant Premise Equipment if the Customer has purchased Premise Equipment from the Company. Rates are shown in Section 19.5 following.

Protected LAN Advantage gives customers protection from equipment and network failure by designating a circuit with primary and secondary fiber pairs and network facing equipment redundancy. Each fiber pair terminates into its own individual port both at the central office switch and at the Company owned customer-premises equipment, giving each fiber pair its own connection to the LAN Advantage network. In the event of a primary connection failure, traffic will automatically reroute to the secondary connection. The customer-owned equipment plugs directly into the LAN Advantage circuit by a standard, single Ethernet port. The design does not include geographic fiber route diversity, location, or dual customer hand-offs. Unprotected Lan Advantage is the standard LAN Advantage service.
