

**BELLSOUTH TELECOMMUNICATIONS, INC.**

**DESCRIPTION AND JUSTIFICATION**

**GRANDFATHER OPTIONAL FEATURES FOR FRAME RELAY SERVICES**

**TRANSMITTAL NO. 1134**

With this filing, BellSouth Telecommunications, Inc., (hereinafter "BellSouth"), is revising Tariff F.C.C. No. 1, Sections 21 and 23, to grandfather optional features associated with Exchange Access Frame Relay Service (XAFRS) and Managed Shared Frame Relay Service (MSFRS). This Transmittal is being filed May 1, 2008, and will become effective May 16, 2008.

Customer Network Management (CNM) - Customer Configuration Management Capability is an optional feature of XAFRS and MSFRS and provides customers the ability to add, change and delete PVCs without utilizing the standard ordering/provisioning process to request the Company to perform these functions. With the effective date of this filing, this feature will not be available for new customer orders. Existing customers may continue to use this service but may not order new service.

Also with this filing, the Security Card will not be available for new customer orders. The Security Card is used with Web Access to CNM - Network Visibility Service (NVS), which is an optional feature of XAFRS and MSFRS. Existing Security Card customers may continue using the card but new orders for the card will not be accepted. Instead of the Security Card, Web Access customers will utilize a customer user identification code and password.

The above services are being grandfathered effective May 16, 2008. Revisions have been made to Sections 21 and 23 to reflect these changes.
