4.2.10 Common Channel Signaling System 7 Access Service (Cont'd)

(C) SS7 Transport

SS7 Transport provides for message transport in support of services which require receiving and terminating signaling information using the SS7 protocol. SS7 Transport will route messages to the appropriate global title address or to the signaling point code address based on STP translations. Customer STP interconnection can be obtained by interconnection at any of the Telephone Companies STP pair locations as shown in this section.

Interconnection at primary STP locations will provide for SS7 transport to other primary STP locations within the Telephone Companies' SS7 Network. The Telephone Companies primary STP locations are:

Santa Monica and Long Beach, California
Tampa and Clearwater, Florida

(D)

Denton and Irving, Texas
Manassas and Occoquan, Virginia

(D)

SS7 Transport is comprised of two rates. One rate is applicable for SS7 Transport between Primary STP locations. The second rate is applicable for SS7 Transport between a Primary STP location and any local STP location.

A customer ordering SS7 Transport must, at minimum, subscribe to the Telephone Company's Common Channel Signaling System 7 (CCS7) Access Service as shown in this section.
