COMMUNICATIONS SERVICES TARIFF

---

SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES

The services in this Tariff are available in the following operating territories:

PART I

Delaware - Verizon Delaware LLC  
District of Columbia - Verizon Washington, DC Inc.

Maryland - Verizon Maryland Inc.  
Massachusetts - Verizon New England Inc.

New York/Connecticut - Verizon New York Inc.  
Pennsylvania - Verizon Pennsylvania Inc.  
Rhode Island - Verizon New England Inc.

Virginia - Verizon Virginia Inc.

(D)

PART II

California - Verizon California Inc.  
Florida - Verizon Florida LLC

(D)

(D)

|  
(D)

North Carolina - Verizon South Inc.

(D)

(D)

Pennsylvania - Verizon North Retain Co.

(C)

(D)

Texas - GTE Southwest Incorporated  
Virginia - Verizon South Inc.

(D)

(D)

PART III

Includes all of the operating territories as shown above in Part I and Part II.

\* Refer to Section 7 for operating territories.

(Issued under Transmittal No. 1094)

Issued: June 16, 2010

Effective: July 1, 2010

Vice President, Federal Regulatory  
1300 I Street, NW, Washington, D.C. 20005

## COMMUNICATIONS SERVICES TARIFF

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART I (Continued)

5.3 Transparent LAN Service#

This service is offered in the following states: Delaware, Maryland, Massachusetts, New York (including the New York - New Jersey Corridor), Pennsylvania, Rhode Island, and Virginia, and to Customers who fall within the boundaries of the District of Columbia, Maryland and Virginia (LATA 236). (D)

A. General

1. Transparent LAN Service (TLS) is a high speed data service which provides Ethernet\* transport within a LATA and within the New York - New Jersey Corridor (Ethernet TLS) or allows interconnection of Ethernet TLS as described herein between LATAs (National TLS). Ethernet TLS is provided over a shared network and utilizes FDDI, ATM, Gigabit Ethernet or a combination, to transport the Customers' data between Customer locations within a LATA and within the New

\* For 16 Mbps TLS, token ring transport is provided in lieu of Ethernet transport.

# Effective March 30, 2007, orders for new TLS are no longer permitted. The Company will continue to provide TLS pursuant to this Section 5.3 on any existing Ethernet TLS or National TLS that is in-service as of March 30, 2007, or any order for Ethernet TLS or National TLS that is placed with the Company prior to March 29, 2007 (collectively, Existing Ethernet TLS or Existing National TLS, as applicable), subject to the following conditions:

- a. The Company will continue to provide Existing Ethernet TLS to a term plan customer for an additional six (6) months beyond the expiration date of the customer's current commitment period, or until the customer replaces the Existing Ethernet TLS with a comparable Company provided service, or discontinues service, whichever comes first. Moves, additions, and/or changes are not permitted.
- b. The Company will continue to provide Existing Ethernet TLS purchased on a month-to-month basis until September 30, 2007, or until the customer replaces the Existing Ethernet TLS with a comparable Company provided service, or discontinues service, whichever comes first. Moves, additions, and/or changes are not permitted.
- c. The Company will continue to provide Existing National TLS to a term plan customer until the customer replaces the Existing National TLS with a comparable Company provided service, discontinues service, or until the service is withdrawn from the Tariff, whichever comes first. Moves, additions, and/or changes are not permitted.

(Issued under Transmittal No. 1094)

Issued: June 16, 2010

Effective: July 1, 2010

Vice President, Federal Regulatory  
1300 I Street, NW, Washington, D.C. 20005

## PART I (Continued)

5.8 Exchange Access Frame Relay Service#

This service is offered in the following states: Delaware, District of Columbia, Maryland, Pennsylvania, and Virginia.

(D)

5.8.1 General

Exchange Access Frame Relay Service (XA-FRS) is a medium to high speed connection-oriented packet-switched data service that allows for the interconnection of Local Area Networks (LANs) or other compatible Customer equipment across a wide area for the purpose of interstate access. XA-FRS allows for the transfer of variable length frames (packets). Frames are relayed by virtual connections, i.e., frames travel a fixed path through the network although bandwidth is not dedicated to each virtual connection.

# The following footnote is not applicable to the 56 kbps and 64 kbps UNI Port With Access Line Connection, 56 kbps, 64 kbps, and 128 kbps UNI Port Only Connection, 56 kbps, 64 kbps, and 128 kbps Backup UNI, PVC CIR, and Premier PVC rate elements of XA-FRS. Effective May 9, 2007, orders for new XA-FRS are no longer permitted. The Company will continue to provide XA-FRS pursuant to this Section 5.8 on any existing XA-FRS that is in-service as of May 9, 2007, or any order for XA-FRS that is placed with the Company prior to May 9, 2007 (collectively, Existing FRS), subject to the following conditions:

- a. The Company will continue to provide Existing FRS to a term plan customer for an additional six (6) months beyond the expiration date of the customer's current commitment period at the existing rates of the current term plan, or until the customer replaces the Existing FRS with a comparable Company provided service, or discontinues service, whichever comes first. Subject to the availability of network facilities, moves are permitted provided that such moves do not require a new commitment period. Administrative changes that do not result in a physical change to the underlying UNI/NNI are permitted. Additions are not permitted.
- b. The Company will continue to provide Existing FRS UNIs/NNIs purchased on a month-to-month basis until November 9, 2007, or until the customer replaces the Existing FRS with a comparable Company provided service, or discontinues service, whichever comes first. Moves, additions, and/or changes are not permitted.

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART I (Continued)

5.9 Exchange Access Asynchronous Transfer Mode Cell Relay Service I

This service is offered in the following states: Delaware, District of Columbia, Maryland, Pennsylvania, and Virginia. Service availability is limited. See terms and conditions as shown in Section 5.9.4 M. (D)

5.9.1 General

Exchange Access Asynchronous Transfer Mode Cell Relay Service (XA ATM-CRS) is a telecommunications transport and switching service that provides for high speed connectivity between and among widely distributed locations. It is a fast packet, cell-based technology which supports user applications requiring high and flexible bandwidth, high-performance transport and switching. Service availability is limited.

XA ATM-CRS is comprised of an interface, User Network Interface (UNI) at the ATM switch and a transport facility that terminates on compatible Customer Premises Equipment (CPE). These UNI Access Connections are connected via Permanent Virtual Circuits (PVCs) using ATM technology over Company's fast packet network.

All XA ATM-CRS access facilities must be in conformance with American National Standards Institute (ANSI) standards. Technical specifications for this service are described in the following technical publications:

TR-NWT-001112, Issue 1 Issued: December 1994	GR-1110-CORE, Issue 1 Issued: September 1994
GR-1248-CORE, Issue 2 Issued: September 1995	SR-3330, Issue 1 Issued: November 1994

(Issued under Transmittal No. 1094)

Issued: June 16, 2010

Effective: July 1, 2010

Vice President, Federal Regulatory  
1300 I St NW, Washington, D.C. 20005

## COMMUNICATIONS SERVICES TARIFF

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART I (Continued)

5.10 Asynchronous Transfer Mode Cell Relay Service#

This service is offered in the following states: Delaware, District of Columbia, Maryland, Massachusetts, New York/ Connecticut, Pennsylvania, Rhode Island, and Virginia.

(D)

5.10.1 General

Asynchronous Transfer Mode (ATM) Cell Relay Service (CRS) is a telecommunications transport and switching service that provides for high-speed connectivity between Customer-designated locations. ATM CRS consists of two interfaces: User Network Interface (UNI) and Interim Inter-switch Signaling Protocol (IISP). These interfaces are available in various configurations, including Port With Access Line Connection and Port Only Connection with either incremental or full bandwidth.

The UNI Port With Access Line Connection is a dedicated digital line that provides a link from Customer's premises to one of Company's ATM CRS hubs. UNIs are also provisioned as an Inverse Multiplexing ATM (IMA) Port With Access Line Connection as defined in 5.10.2(B) and as a Port Only Connection as defined in 5.10.11(A).

# Except as otherwise specified for Effective Bandwidth for Incremental UNIs, effective May 9, 2007, orders for new ATM CRS are no longer permitted. The Company will continue to provide ATM CRS pursuant to this Section 5.10 on any existing ATM CRS that is in-service as of May 9, 2007, or any order for ATM CRS that is placed with the Company prior to May 9, 2007 (collectively, Existing ATM CRS), subject to the following condition:

For any Existing ATM CRS that is currently subscribed to a term plan (i.e., commitment periods of 1-, 2-, 3-, and 5-years), the Company will continue to provide the Existing ATM CRS for an additional six (6) months beyond the expiration date of the customer's current commitment period at the prevailing rates of the current term plan, or until the customer replaces the Existing ATM CRS with a comparable Company provided service, or discontinues service, whichever comes first. Subject to availability of facilities and equipment, moves and/or changes to the Existing ATM CRS are permitted during the term plan commitment period provided that such moves and/or changes do not require a new commitment period. Orders for additional Effective Bandwidth for Incremental UNIs, including additions and changes, are permitted during the term plan commitment period and the six (6) month extension period and will be provided on a month-to-month basis at the prevailing rate of the current term plan. No other additions, changes or moves are permitted during the six (6) month extension period.

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART I (Continued)

5.11 Federal Government Services

This service is offered in the following states: Delaware, District of Columbia, Maryland, and Pennsylvania.

(D)

5.11.1 General

These services are provided to Customers for use only by agencies or branches of the Federal Government and other users authorized by the Federal Government. Services provided to state emergency operations centers are included. These services provide for command and control communications, including communications for national security, emergency preparedness and presidential requirements. They are required to assure continuity of Government in emergency and crisis situations and to provide for national security.

Services for command and control communications and for national security and emergency preparedness may sometimes be provided under non-emergency conditions for a short duration to determine network assurance. However, Company reserves the right to limit or to decline participation in these non-emergency condition requests for service.

A. Emergency Conditions

These services will be provided on the date requested or as soon as possible thereafter when the emergency falls into one of the following categories:

1. State of crisis declared by the National Command Authorities (includes commitments made to the National Communications System in the "National Plan for Emergencies and Major Disasters").

Effective: July 1, 2010

Vice President, Federal Regulatory  
1300 I St NW, Washington, D.C. 20005

## COMMUNICATIONS SERVICES TARIFF

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART II (Continued)

5.2 Frame Relay Service I

This service is offered in the following states: California, Florida, Pennsylvania, Texas, and Virginia. (C)

5.2.1 Service Description

Frame Relay Service I is no longer available to new Customers. Existing TPP Customers may continue their service at current prices until their TPP expires or their service is disconnected, whichever occurs first. Existing month-to-month Customers may continue their service until September 30, 2006 or until their service is disconnected, whichever occurs first.

Frame Relay Service (FRS) is a "fast packet" network service that permits the transmission of data at speeds of 56/64\* Kbps, 128 Kbps, 256 Kbps, 384 Kbps, 1.544 Mbps, or 45 Mbps using Permanent Virtual Circuits (PVCs).

PVCs are logical circuits that define a specific path for data sent by Customer to another location. These circuits are virtual because they are established in software tables and do not tie up capacity when not in use. This also allows multiple paths (PVCs) to be defined on any given port, thereby providing a single access line the capability to transmit data to multiple destinations.

There are three types of Frame Relay PVCs:

## A. Permanent Virtual Circuit (PVC) - Intrazone

An intrazone PVC is a logical channel path between two Customer ports located within the same zone.

## B. Permanent Virtual Circuit (PVC) - Interzone

An interzone PVC is a logical channel path between two Customer ports located in different zones within a state.

## C. Permanent Virtual Circuit (PVC) - Interworked

An interworked PVC is a logical channel path that traverses both a Frame Relay switch and an ATM switch.

Frame Relay zones are found in Section 5.2.6.

\* Upon request and where available.

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART II (Continued)

5.3 Frame Relay Service II

This service is offered in the following states: California, North Carolina, Pennsylvania, Texas, and Virginia. (D)  
(D)

5.3.1 Service Description

Frame Relay Service II is no longer available to new Customers. Existing TPP Customers may continue their service at current prices until their TPP expires or their service is disconnected, whichever occurs first. Existing month-to-month Customers may continue their service until September 30, 2006 or until their service is disconnected, whichever occurs first.

Frame Relay Service (FRS) is a "fast packet" network service that permits the transmission of data at speeds of 56/64\* Kbps, 1.544 Mbps, or 45 Mbps using Permanent Virtual Circuits (PVCs).

PVCs are logical circuits that define a specific path for data sent by Customer to another location. These circuits are virtual because they are established in software tables and do not tie up capacity when not in use. This also allows multiple paths (PVCs) to be defined on any given port, thereby providing a single access line the capability to transmit data to multiple destinations.

There are three types of Frame Relay PVCs:

## A. Permanent Virtual Circuit (PVC) - Intrazone

An intrazone PVC is a logical channel path between two Customer ports located within the same zone.

## B. Permanent Virtual Circuit (PVC) - Interzone

An interzone PVC is a logical channel path between two Customer ports located in different zones within a state.

## C. Permanent Virtual Circuit (PVC) - Interworked

An interworked PVC is a logical channel path that traverses both a Frame Relay switch and an ATM switch.

Frame Relay zones are set forth under 5.3.6.

## PART II (Continued)

5.4 High Capacity Broadband Access Cloud#

This service is offered in the following states: California, Florida, (D)  
Pennsylvania, Texas, and Virginia. (D)

5.4.1 Service Description

High Capacity Broadband Access Cloud (HiBAC) Service is a multi-protocol network that transparently transports a combination of HiBAC Asynchronous Transfer Mode (ATM), inter-worked Frame Relay services, HiBAC Frame Relay services, DSL services and TCP/IP Data Aggregation Services (CyberWAN™) technologies over a single network facility. HiBAC Service is made available to network service

# Effective March 12, 2003, this service is no longer available to new customers. Orders to disconnect service received by May 12, 2003 with a due date no later than August 12, 2003, will not be subject to termination liability charges. The customer will be responsible for ensuring that there is no active traffic on the circuit as of the disconnect order due date. Otherwise, the Company will continue to provide service to existing customers until March 12, 2004, unless the customer subscribes to a term plan, in which case the service will be provided until their term commitment plan expires or their service is disconnected, whichever occurs first. Customers with existing term plans scheduled to expire after March 12, 2003 but before March 12, 2004 may continue service until March 12, 2004 at the rates applicable to the expiring plan. Following this extension, the customer will be required to migrate to either Frame Relay Service III as set forth in Part II, Section 5.9 or Asynchronous Transfer Mode (ATM) Cell Relay Service as set forth in Section 5.10. Orders to disconnect service placed after May 12, 2003 will be subject to the applicable termination liability.

Moves to new locations will not be permitted effective March 12, 2003. Additions or changes, other than moves, to services provided under a term plan will be permitted within the serving wire center(s) where the service exists until March 12, 2004 subject to the availability of suitable facilities. The term plan for changes or additions to services will expire coterminous with the expiration of the customer's existing term plan.

The Company will waive termination liability charges for customers migrating their service to either frame relay service or asynchronous transfer mode cell relay service as long as: (1) the replacing service level or port capacity is equal to or greater than the existing service; (2) both the existing and the new services are provided solely by Company; (3) the orders to disconnect and reconnect the service are placed at the same time; and (4) the new service is provided at the same locations as the existing service.

## COMMUNICATIONS SERVICES TARIFF

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART II (Continued)

5.5 Asynchronous Transfer Mode Network Service I#

This service is offered in the following states: California, Florida, (D)  
Pennsylvania, Texas, and Virginia. (D)

5.5.1 General

Asynchronous Transfer Mode (ATM) Network Service is a form of "fast packet" switching service for high speed networks which require flexible bandwidth, high-performance transport and switching for connectivity between and among widely distributed Customer locations. ATM Network Service is a cell-based, connection-oriented, switching and multiplexing technology designed to be a fast, general-purpose transfer mode for multiple services.

# Effective March 12, 2003, this service is no longer available to new customers. Orders to disconnect service received by May 12, 2003 with a due date no later than August 12, 2003 will not be subject to termination liability charges. The customer will be responsible for ensuring that there is no active traffic on the circuit as of the disconnect order due date. Otherwise, the Company will continue to provide service to existing customers until March 12, 2004 unless the customer subscribes to a term plan, in which case the service will be provided until their term commitment plan expires or their service is disconnected, whichever occurs first. Customers with existing term plans scheduled to expire after March 12, 2003 but before March 12, 2004 may continue service until March 12, 2004 at the rates applicable to the expiring plan. Following this extension, the customer will be required to migrate to either Frame Relay Service III as set forth in Part II, Section 5.9 or Asynchronous Transfer Mode (ATM) Cell Relay Service as set forth in Section 5.10 or to disconnect their service. Orders to disconnect service placed after March 12, 2003 will be subject to applicable termination liability.

Moves to new locations will not be permitted effective March 12, 2003. Additions or changes, other than moves, to services provided under a term plan will be permitted within the serving wire center(s) where the service exists until March 12, 2003 subject to the availability of suitable facilities. The term plan for changes or additions to services will expire coterminous with the expiration of the customer's existing term plan.

The Company will waive termination liability charges for customers migrating their service to either Frame Relay Service III as set forth in Part II, Section 5.9 or ATM Cell Relay Service as set forth in Part II, Section 5.10 as long as: (1) the replacing service level or port capacity is equal to or greater than the existing service; (2) the orders to disconnect and reconnect the service are placed at the same time; and (3) the new service is provided at the same locations as the existing service.

5.9 Frame Relay Service III#

This service is offered in the following states: California, Florida, (D)  
North Carolina, Pennsylvania, Texas, and Virginia. (D)

Frame Relay Service III is available where facilities and conditions permit.

5.9.1 General

Frame Relay Service III (FRSIII) is a medium to high speed, connection-oriented, packet switched data service that allows for the interconnection of Local Area Networks (LANs) or other compatible customer equipment across a wide area for the purpose of interstate access. FRSIII allows for the transfer of variable length frames (packets). Frames are relayed by virtual connections, i.e., frames travel a fixed path through the network although bandwidth is not dedicated to each virtual connection.

# The following footnote is not applicable to the 56/64 kbps and 128 kbps UNI Port With Access Line Connection, 56/64 kbps and 128 kbps UNI Port Only Connection, 56/64 kbps and 128 kbps Backup UNI, PVC CIR, Interzone Transport, and FRS to ATM Interworking rate elements of FRSIII. Effective May 9, 2007, orders for new FRSIII are no longer permitted. The Company will continue to provide FRSIII pursuant to this Section 5.9 on any existing FRSIII that is in-service as of May 9, 2007, or any order for FRSIII that is placed with the Company prior to May 9, 2007 (collectively, Existing FRS), subject to the following conditions:

- a. The Company will continue to provide Existing FRS to a term plan customer for an additional six (6) months beyond the expiration date of the customer's current commitment period at the existing rates of the current term plan, or until the customer replaces the Existing FRS with a comparable Company provided service, or discontinues service, whichever comes first. Subject to the availability of network facilities, moves are permitted provided that such moves do not require a new commitment period. Administrative changes that do not result in a physical change to the underlying UNI/NNI are permitted. Additions are not permitted.
- b. The Company will continue to provide Existing FRS UNIs/NNIs purchased on a month-to-month basis until November 9, 2007, or until the customer replaces the Existing FRS with a comparable Company provided service, or discontinues service, whichever comes first. Moves, additions, and/or changes are not permitted.

\* Effective September 22, 2004, these rate elements no longer apply to new customers. Company will continue to provide these rate elements to existing Customers until January 20, 2005. Customers will be required to migrate to one of the new, discrete CIR speeds by one of the following methods:

1. Customer may request a new CIR from among the discrete speeds available at the then effective rates set forth herein; or
2. Customer may take no action, and effective January 20, 2005, the Customer will automatically be assigned to the new required CIR speed closest to, but not lower than, the maximum speed of the existing CIR range; or
3. Customer may discontinue service at any time prior to January 20, 2005.

The Administrative Charge will be waived for options 1 and 2 above. Should existing customers in the 257 - 320 Kbps CIR range choose to discontinue service due to the increase in the CIR Monthly Rate, any penalties associated with the CIR or the underlying UNI/NNI will be waived.

## PART II (Continued)

5.10 Asynchronous Transfer Mode (ATM) Cell Relay Service (CRS)#

This service is offered in the following states: California, Florida, (D)  
North Carolina, Pennsylvania, Texas, and Virginia. (D)

5.10.1 Description of Service

Asynchronous Transfer Mode (ATM) Cell Relay Service (CRS) is a telecommunications transport and switching service that provides for high-speed connectivity between Customer-designated locations. ATM CRS consists of two interfaces: User Network Interface (UNI) and Interim Inter-switch Signaling Protocol (IISP). These interfaces are available in various configurations including Port With Access Line Connection and Port Only Connection, with either incremental or full bandwidth.

The UNI Port With Access Line Connection is a dedicated digital line that provides a link from the Customer's premises to one of Company's ATM CRS hubs. UNIs are also provisioned as an Inverse Multiplexing ATM (IMA) Port with Access Line Connection as defined in 5.10.2(B) and as a Port Only Connection as defined in 5.10.2(D).

The IISP Port With Access Line Connection, which is essentially equivalent to the UNI, provides a link from an Interexchange Carrier or another Customer's network to one of Company's ATM CRS hubs. IISPs are also provisioned as a Port Only Connection as defined in 5.10.2(D).

# Except as otherwise specified for Effective Bandwidth for Incremental UNIs, effective May 9, 2007, orders for new ATM CRS are no longer permitted. The Company will continue to provide ATM CRS pursuant to this Section 5.10 on any existing ATM CRS that is in-service as of May 9, 2007, or any order for ATM CRS that is placed with the Company prior to May 9, 2007 (collectively, Existing ATM CRS), subject to the following condition:

For any Existing ATM CRS that is currently subscribed to a term plan (i.e., commitment periods of 1-, 2-, 3-, and 5-years), the Company will continue to provide the Existing ATM CRS for an additional six (6) months beyond the expiration date of the customer's current commitment period at the prevailing rates of the current term plan, or until the customer replaces the Existing ATM CRS with a comparable Company provided service, or discontinues service, whichever comes first. Subject to availability of facilities and equipment, moves and/or changes to the Existing ATM CRS are permitted during the term plan commitment period provided that such moves and/or changes do not require a new commitment period. Orders for Effective Bandwidth for Incremental UNIs, including additions and changes, are permitted during the term plan commitment period and the six (6) month extension period. No other additions, changes or moves are permitted during the six (6) month extension period.

(Issued under Transmittal No. 1094)

Issued: June 16, 2010

Effective: July 1, 2010

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART II (Continued)

5.11 Transparent LAN Service

This service is offered in the following states: California, Florida, (D)  
North Carolina, Pennsylvania, Texas, and Virginia. (D)

A. General

1. Transparent LAN Service (TLS) is a high speed data service which provides Ethernet transport within a LATA (Ethernet TLS) or allows interconnection of Ethernet TLS as described herein between LATAs (National TLS). Ethernet TLS is provided over a shared network and utilizes FDDI, ATM, Gigabit Ethernet or a combination, to transport the Customers' data between customer locations within a LATA. National TLS interconnects Ethernet TLS with an Interexchange Carrier or other Service Provider, allowing the Customers' data to be transported to a different Ethernet TLS in a different LATA by use of Ethernet Virtual Circuits across the Company's Multi-Protocol Label Switching network ("National TLS Network").

Ethernet TLS is available in two service types: Ethernet Multipoint Service (EMS) and Ethernet Relay Service (ERS). EMS is a connection-less Ethernet TLS Service that allows connectivity among multiple Customer designated locations within a LATA. ERS is a connection-oriented Ethernet TLS Service that allows point-to-point connectivity between Customer designated locations within a LATA.

# Effective March 30, 2007, orders for new TLS are no longer permitted. The Company will continue to provide TLS pursuant to this Section 5.11 on any existing Ethernet TLS or National TLS that is in-service as of March 30, 2007, or any order for Ethernet TLS or National TLS that is placed with the Company prior to March 29, 2007 (collectively, Existing Ethernet TLS or Existing National TLS, as applicable), subject to the following conditions:

- a. The Company will continue to provide Existing Ethernet TLS to a term plan customer for an additional six (6) months beyond the expiration date of the customer's current commitment period, or until the customer replaces the Existing Ethernet TLS with a comparable Company provided service, or discontinues service, whichever comes first. Moves, additions, and/or changes are not permitted.
- b. The Company will continue to provide Existing Ethernet TLS purchased on a month-to-month basis until September 30, 2007, or until the customer replaces the Existing Ethernet TLS with a comparable Company provided service, or discontinues service, whichever comes first. Moves, additions, and/or changes are not permitted.
- c. The Company will continue to provide Existing National TLS to a term plan customer until the customer replaces the Existing National TLS with a comparable Company provided service, discontinues service, or until the service is withdrawn from the Tariff, whichever comes first. Moves, additions, and/or changes are not permitted.

Effective: July 1, 2010

## COMMUNICATIONS SERVICES TARIFF

## SECTION 5 - DESCRIPTION OF DATA SERVICES AND RATES (Continued)

## PART II (Continued)

5.11 Transparent LAN Service

This service is offered in the following states: California, Florida, North Carolina, Pennsylvania, Texas, and Virginia. (D)

A. General

1. Transparent LAN Service (TLS) is a high speed data service which provides Ethernet transport within a LATA (Ethernet TLS) or allows interconnection of Ethernet TLS as described herein between LATAs (National TLS). Ethernet TLS is provided over a shared network and utilizes FDDI, ATM, Gigabit Ethernet or a combination, to transport the Customers' data between customer locations within a LATA. National TLS interconnects Ethernet TLS with an Interexchange Carrier or other Service Provider, allowing the Customers' data to be transported to a different Ethernet TLS in a different LATA by use of Ethernet Virtual Circuits across the Company's Multi-Protocol Label Switching network ("National TLS Network").

Ethernet TLS is available in two service types: Ethernet Multipoint Service (EMS) and Ethernet Relay Service (ERS). EMS is a connection-less Ethernet TLS Service that allows connectivity among multiple Customer designated locations within a LATA. ERS is a connection-oriented Ethernet TLS Service that allows point-to-point connectivity between Customer designated locations within a LATA.

# Effective March 30, 2007, orders for new TLS are no longer permitted. The Company will continue to provide TLS pursuant to this Section 5.11 on any existing Ethernet TLS or National TLS that is in-service as of March 30, 2007, or any order for Ethernet TLS or National TLS that is placed with the Company prior to March 29, 2007 (collectively, Existing Ethernet TLS or Existing National TLS, as applicable), subject to the following conditions:

- a. The Company will continue to provide Existing Ethernet TLS to a term plan customer for an additional six (6) months beyond the expiration date of the customer's current commitment period, or until the customer replaces the Existing Ethernet TLS with a comparable Company provided service, or discontinues service, whichever comes first. Moves, additions, and/or changes are not permitted.
- b. The Company will continue to provide Existing Ethernet TLS purchased on a month-to-month basis until September 30, 2007, or until the customer replaces the Existing Ethernet TLS with a comparable Company provided service, or discontinues service, whichever comes first. Moves, additions, and/or changes are not permitted.
- c. The Company will continue to provide Existing National TLS to a term plan customer until the customer replaces the Existing National TLS with a comparable Company provided service, discontinues service, or until the service is withdrawn from the Tariff, whichever comes first. Moves, additions, and/or changes are not permitted.

## COMMUNICATIONS SERVICES TARIFF

## SECTION 9 - CONTRACT TARIFFS

9. Contract Tariffs

This section contains terms and conditions and rates and charges for contract tariffs provided by Company. Individual contract tariffs are filed beginning at 9.2 following.

9.1 General

Contract tariffs apply in those Metropolitan Statistical Areas (MSAs) where Company has received Phase I Pricing Flexibility relief for Fast Packet Services.

Each contract tariff includes a serving area that is comprised of one or more MSAs within the operating territories set forth in Section 7 preceding of one or more of the Verizon Telephone Companies participating in this tariff. The remaining Verizon Operating Telephone Companies participate in Tariff F.C.C. No. 1, No. 11, and/or No. 14 as shown below. These tariffs also specify the operating territories of each company.

Unless otherwise specified in the individual contract tariff option, when the serving area for a contract tariff encompasses more than one Verizon Operating Company, that contract aggregates services, rates and charges, incentives and other contract-specific terms and conditions for MSAs within all of the Verizon Operating Telephone Companies participating in that contract.

<u>Tariff F.C.C. No. 1</u>	<u>Tariff F.C.C. No. 14</u>
