**7. PRIVATE LINE TRANSPORT SERVICE**

**7.11 DS1 SERVICE**

**7.11.2 OPTIONAL FEATURES AND FUNCTIONS (Cont'd)**

**J. Environmental Cabinet**

(C-x)

An Environmental Cabinet provides housing for DS1 network interface equipment in locations where there are unique environmental conditions (e.g., extreme weather conditions). A nonrecurring charge applies for each DS1 termination in an Environmental Cabinet.

(C-x)

Customers with cabinets installed prior to August 3, 1999, were billed on a per cabinet basis and may build to a capacity of four DS1 terminations for each existing cabinet. Additional Environmental Cabinets will be provided and billed on a per DS1 termination basis.

**7. PRIVATE LINE TRANSPORT SERVICE**

**7.11 DS1 SERVICE**

**7.11.2 OPTIONAL FEATURES AND FUNCTIONS (Cont'd)**

**L. Call Event and Management Signaling Service (CEMSS) - BSE**

Call Event and Management Signaling Service (CEMSS) provides a mediated service interface between a customer-provided application platform and a Company gateway. CEMSS allows providers to send specific Internet Protocol (IP) messages through the Company gateway. There are two types of defined messages, Parlay and Service Parameter Update Gateway (SPUG):

- Parlay – this CEMSS offering supports specific inbound and outbound messages from the Parlay Protocol.
- SPUG – the SPUG inbound and outbound messages control the Company Advanced Intelligent Network (AIN) feature parameter on a given subscriber's line.

The messages will be routed to the AIN SCP for interaction with certain basic services associated with the subscriber local loop designated by the CEMSS customer.

CEMSS may be used by service providers to obtain call event messages, perform call control functions and as a means to access and manage AIN service parameters associated with subscriber lines served from Company AIN-capable local switches.

Call event messages shall contain detailed information including, but not limited to, these examples:

- Type of call event
- Subscriber that initiated the call event
- Date and time call event was completed
- Location from where the call event was initiated

Technical Specifications for CEMSS are delineated in Qwest Corporation Technical Publication PUB 77420.
