ACCESS SERVICE

SECTION 6. SWITCHED ACCESS SERVICE (Cont.)6.1 General (Cont.)6.1.2 Rate Categories (Cont.)(C) End Office

The End Office rate category provides the local end office switching and end user termination functions necessary to complete the transmission of Switched Access communications to and from the end users served by the local end office. The End Office rate category includes the Local Switching, Information, and Toll Free Number Data Base Query rate elements.

(1) Local Switching(a) Local Switching Rate Element

(T)

The Local Switching rate element provides for the use of end office switching equipment.

Where end offices are appropriately equipped, international dialing may be provided. International dialing provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard FGD equipped end office.

The Local Switching rate element also provides the terminations for the end user lines terminating in the local end office.

There are two types of line terminations, i.e., Common Line terminations and Special Access Service terminations utilized in the provision of WATS or WATS-type services at Telephone Company designated WATS Serving Offices.

The above Special Access Service terminations are differentiated by line side vs. trunk side terminations. In addition, there are various types of originating and terminating line side terminations depending on the type of signaling associated with the Special Access Service. Line side terminations are available with either dial pulse or dual tone multifrequency address signaling.

Local Switching rates are set forth in Section 10 following. The application of these rates with respect to individual Feature Groups is as set forth in 6.6.1(C) following.

ACCESS SERVICE

SECTION 6. SWITCHED ACCESS SERVICE (Cont.)6.1 General (Cont.)6.1.2 Rate Categories (Cont.)(C) End Office (Cont.)(1) Local Switching (Cont.)(b) End Office Shared Port

(N)

The End Office Shared Port rate provides for the termination of common transport trunks in shared end office ports and in remote switching system or module (RSS or RSM) ports. The End Office Shared Port rate is assessed on a per-MOU basis to all trunkside originating and terminating access minutes utilizing tandem routing to an end office switch. If tandem routing is being utilized to a RSS or RSM (via a host office), the shared port rate is assessed to the access minutes originating or terminating from that RSS or RSM and is not assessed at the host office. If the customer has requested direct routing from the SWC to a RSS or RSM (via a host office), the End Office Shared Port rate is assessed to the access minutes originating or terminating from the RSS or RSM. The End Office Shared Port rate is not assessed to FGA, CSL or Voice DA traffic.
