
ACCESS SERVICE

9. Grandfathered Service9.1 General

Grandfathered services are tariff offerings which are limited to existing customers and are not available to new customers. The services listed in this section are shown to be grandfathered or limited to existing service provided to existing customers. Existing service is service that was in place prior to the service being grandfathered. Existing customers are those customers who were already subscribing to a service prior to the service being grandfathered.

New customers are not eligible to subscribe to a grandfathered service. This includes previously grandfathered customers who have for any reason discontinued their grandfathered service.

9.2 ADSL Service

This offering applies to services in place as of December 31, 2005 and to additions to such existing service for the same customer at the same location. Rates for these services are listed in Section 9.2.8

9.2.1 Service Description

This section contains the rules and regulations pertaining to the provision of Asymmetrical Digital Subscriber Line (ADSL) service. ADSL service is an access data technology offering. The Telephone Company currently offers ADSL service at the nominal speed levels of 1.0 Mbps down/128 Kbps up. The "up" speed represents transmission speed from the customer designated premise (CDP) to the Telephone Company's DSL connection point, while the "down" speed represents transmission speed from the Telephone Company's DSL connection point to the CDP. The connection point is the aggregation point designated by the Telephone Company for connecting multiple Telephone Company serving wire centers of DSL terminations to other Telephone Company provided network interface services.

ACCESS SERVICE

9. Grandfathered Service (Cont'd)9.2 ADSL Service (Cont'd)9.2.1 Service Description (Cont'd)

ADSL Service consists of ADSL Channels, which connect a customer designated premises to the DSL connection point; DSL Access Ports, which allow the aggregation of traffic from multiple ADSL Channels onto the same facility; and Permanent Virtual Circuits (PVCs), which define logical connections between ADSL Channels and DSL Ports. While the Telephone Company envisions that ADSL Channels and PVCs will generally be purchased by end users and DSL Access Ports will generally be purchased by Internet Service Providers (ISPs), there is no restriction as to what type of customer may order the various rate elements. Use of the terms "end user customer" to mean the customer purchasing the ADSL Channel and "ISP customer" to mean the customer purchasing the DSL Access port are meant only to clarify rate relationships and are not meant to limit customer choices.

Where a service is ordered with a minimum term commitments the regulations in Section 7.4.8 of this tariff apply to the discontinuation of such service.

9.2.2 ADSL Channel

The ADSL Channel is provisioned over existing Telephone Company copper facilities and transported to the Telephone Company's backbone network. The ADSL Channel provides a connection from the CDP to the DSL connection point.

ADSL is available utilizing the same copper facilities as the basic local exchange service, utilizing the same copper facilities as other tariffed facilities, or on a stand-alone basis utilizing separate facilities.

The Telephone Company will qualify the ADSL Service between the CDP and the serving wire center. The purpose of qualification is to determine the availability and suitability of existing Telephone Company copper facilities to provide the service. The Telephone Company will not provision this service on facilities that are not suitable for ADSL. See Section 9.2.5 following.

ADSL will be provided subject to the availability and limitation of Telephone Company wire centers and outside plant facilities and is only available where technical capabilities permit. Downstream data rates depend on a number of factors, including but not limited to (1) the distance from the CDP to the serving wire center, (2) the type of loop facility, and (3) the physical plant.

ACCESS SERVICE

9. Grandfathered Service (Cont'd)9.2 ADSL Service (Cont'd)9.2.2 ADSL Channel (Cont'd)

Each customer must select one Permanent Virtual Circuit (PVC) to be associated with the ADSL Channel. Each PVC represents a virtual connection between the ADSL Channel and a DSL Access Port. Where technically feasible, a customer may be able to select more than one PVC. In no event may a customer have more PVCs than the maximum number given in Section 9.2.7 for the applicable type of service.

The Telephone Company does not undertake to originate data, but offers the use of its service components, where available, to customers for the purpose of transporting customer-originated data.

9.2.3 DSL Access Port and DSL Extended Access Port

The DSL Access Port charges are for connection to the ADSL Service or to SDSL Service as described in Section 9.3 of this tariff. A customer may select PVCs routing both ADSL Channels and SDSL Channels to the same DSL Access Port where this functionality is available. Alternatively, some customers may choose to use separate DSL Access Ports for SDSL service and ADSL service. A DSL Access Port will be available at the DSL connection points specified by the Telephone Company. The DSL Access Port is available as a DS1 or DS3 interface. The ISP Customer will generally need to obtain transport from the DSL Access Port to the ISP Customer's location. Such transport may be obtained by ordering services from Section 7 or Section 15 of this tariff for connection to the DSL Access Port.

The DSL Extended Access Port includes the functionality of the DSL Access Port plus a communication path between the DSL connection point and the customer's designated premise. The customer's designated premise must be served by the wire center which contains the DSL connection point. The DSL Extended Access Port is available as a DS1 interface.

9.2.4 Responsibility of the Telephone Company

The Telephone Company will provision and maintain ADSL service for the customer from the Network Interface Device (NID) to the DSL connection point. The Telephone Company will advise the end user customer of the equipment necessary to support ADSL service.

ACCESS SERVICE

9. Grandfathered Service (Cont'd)9.2 ADSL Service (Cont'd)9.2.5 Rights of the Telephone Company

The Telephone Company will not provision ADSL service if the Telephone Company reasonably determines that (a) it is not technically feasible over existing facilities, or (b) it will cause interference problems with existing services.

Equipment at the Customer Designated Premises must meet Telephone Company specifications.

During the Telephone Company's network maintenance and software update periods, it may be necessary to place the ADSL wire center out of service. The Telephone Company reserves the right to temporarily interrupt ADSL Service at other times in emergency situations.

9.2.6 Responsibility of the Customer

The end user customer is responsible for providing compatible Customer Premises Equipment (CPE) that is used for connection to ADSL service.

The ISP customer is responsible for providing the Telephone Company with the necessary information to provision the DSL Access Port.

The customer ordering ADSL Channel Service on behalf of its subscriber(s) must obtain a letter of agency. The customer will be responsible for obtaining permission from its subscriber(s) for the Telephone Company's agents or employees to enter the customer's designated locations at a reasonable hour for the purpose of installing, inspecting, repairing, or upon termination of the service, removing the service components of the Telephone Company.

ACCESS SERVICE

9. Grandfathered Service (Cont'd)9.2 ADSL Service (Cont'd)9.2.7 Rate Elements

Monthly recurring charges apply for ADSL service, and nonrecurring charges apply to installation of the service. A nonrecurring charge is also applicable when making changes, i.e., bandwidth, access provider, or move.

ADSL service is available in service level packages, and is based on the downstream and upstream speeds chosen by the customer. Service level packages are defined by the downstream and upstream speeds. Currently available service level packages are:

Package	Downstream	Upstream	Maximum PVCs Allowed
ADSL Tier 1	1.0 Mbps	128 Kbps	3
ADSL Tier 1a	1.0 Mbps	128 Kbps	1
ADSL Tier 2	256 Kbps	128 Kbps	3
ADSL Tier 2a	256 Kbps	128 Kbps	1
ADSL Class B1	512 Kbps	256 Kbps	1
ADSL Class B2	1.0 Mbps	512 Kbps	1
ADSL Class B3	2.0 Mbps	512 Kbps	1

Data speeds set forth above are nominal peak speeds. Actual speeds may be affected by loop distance and other factors, and are not guaranteed. Where technically feasible, the Telephone Company may, at its sole discretion, support speeds in excess of the nominal peak speed.

ACCESS SERVICE

9. Grandfathered Service (Cont'd)9.3 SDSL Service

This offering applies to services in place as of December 31, 2005 and to additions to such existing service for the same customer at the same location. Rates for these services are listed in Section 9.3.8

9.3.1 Service Description

This section contains the rules and regulations pertaining to the provision of Symmetrical Digital Subscriber Line (SDSL) service. SDSL service is an access data technology offering. The Telephone Company offers SDSL service, where available, at the nominal speed listed in Section 9.3.7 of this tariff. These speeds represent transmission between the customer designated premise (CDP) and the Telephone Company's DSL connection point, with transmission speeds being the same in both directions. The connection point is the aggregation point designated by the Telephone Company for connecting multiple Telephone Company serving wire centers of SDSL terminations to other Telephone Company provided network interface services.

SDSL Service consists of SDSL Channels, which connect a customer designated premises to the DSL connection point; DSL Access Ports, described in Section 9.2.3 of this Tariff; and Permanent Virtual Circuits (PVCs), which define logical connections between SDSL Channels and DSL Ports or between SDSL Channels.

Where a service is ordered with a minimum term commitments the regulations in Section 7.4.8 of this tariff apply to the discontinuation of such service.

9.3.2 SDSL Channel

The SDSL Channel is provisioned over Telephone Company copper facilities and transported to the Telephone Company's backbone network. The SDSL Channel provides a connection from the CDP to the DSL connection point. Each SDSL Channel requires that copper facilities between the CDP and the Wire Center serving the CDP be dedicated to the SDSL service. The SDSL Channel does not share copper facilities with basic local exchange service.

The Telephone Company will qualify the SDSL Service between the CDP and the serving wire center. The purpose of qualification is to determine the availability and suitability of existing Telephone Company copper facilities to provide the service. The Telephone Company will not provision this service on facilities that are not suitable for SDSL. See Section 9.3.4 following.

ACCESS SERVICE

9. Grandfathered Service (Cont'd)9.3 SDSL Service (Cont'd)9.3.2 SDSL Channel (Cont'd)

SDSL will be provided subject to the availability and limitation of Telephone Company wire centers and outside plant facilities and is only available where technical capabilities permit. Data rates depend on a number of factors, including but not limited to (1) the distance from the CDP to the serving wire center, (2) the type of loop facility, and (3) the physical plant.

Each customer must select one Permanent Virtual Circuit (PVC) to be associated with the SDSL Channel. The PVC represents a virtual connection between the SDSL Channel and a DSL Access Port, or between two SDSL Channels of the same nominal speed. A customer may select as many PVCs as it is technically feasible to provide over the SDSL Channel.

The Telephone Company does not undertake to originate data, but offers the use of its service components, where available, to customers for the purpose of transporting customer-originated data.

9.3.3 Responsibility of the Telephone Company

The Telephone Company will provision and maintain SDSL service for the customer from the Network Interface Device (NID) to the DSL connection point. The Telephone Company will advise the end user customer of the equipment necessary to support SDSL service.

9.3.4 Rights of the Telephone Company

The Telephone Company will not provision SDSL service if the Telephone Company reasonably determines that (a) it is not technically feasible over existing facilities, or (b) it will cause interference problems with existing services.

Equipment at the Customer Designated Premises must meet Telephone Company specifications.

During the Telephone Company's network maintenance and software update periods, it may be necessary to place the SDSL wire center out of service. The Telephone Company reserves the right to temporarily interrupt SDSL Service at other times in emergency situations.

ACCESS SERVICE

9. Grandfathered Service (Cont'd)9.3 SDSL Service (Cont'd)9.3.5 Responsibility of the Customer

The customer is responsible for providing compatible Customer Premises Equipment (CPE) that is used for connection to the SDSL service. When a customer reports a trouble to the Telephone Company for clearance and Telephone Company personnel are dispatched to the customer's designated premises but no trouble is found in the Telephone Company's facilities or equipment, the customer shall be responsible for payment of a Maintenance of Service Charge as set forth in 9.3.8 following. Failure of Telephone Company personnel to find trouble in Telephone Company facilities and equipment will result in no charge if the trouble is actually in those facilities or equipment but was not discovered at the time. The customer will be responsible for payment of a Maintenance of Service charge when the Telephone Company dispatches personnel and the trouble is in equipment or communications systems provided by parties other than the Telephone Company, or in detariffed CPE provided by the Telephone Company.

The customer ordering SDSL Channel Service on behalf of its subscriber(s) must obtain a letter of agency. The customer will be responsible for obtaining permission from its subscriber(s) for the Telephone Company's agents or employees to enter the customer's designated locations at a reasonable hour for the purpose of installing, inspecting, repairing, or upon termination of the service, removing the service components of the Telephone Company.

9.3.6 Rate Regulations

The SDSL Channel rate element is available on a month to month basis, or at lower monthly rates with minimum term commitments. A customer purchasing multiple month to month SDSL channels may be eligible for lower rates based on the volume billed. The following conditions apply to volume discounts:

At the time the Telephone Company processes the customer's bill, the number of SDSL Channels associated with the customer's account will be determined. All qualifying SDSL Channels will be billed at the rate appropriate for the volume so determined. An SDSL Channel is associated with the customer's account if it is in service and being billed on the bill date.

All SDSL channels provided at speeds of 144 Kbps, 256 Kbps, 512 Kbps, 768 Kbps, 1.024 Mbps and 1.544 Mbps on a single bill will qualify for inclusion in the volume discount. A customer who is receiving a volume discount on SDSL Channels will receive the previous month's level of discount on partial charges or credits for SDSL Channels installed or removed during the preceding month.

ACCESS SERVICE

9. Grandfathered Service (Cont'd)9.3 SDSL Service (Cont'd)9.3.7 Rate Elements

Monthly recurring charges apply for SDSL service, and nonrecurring charges apply to installation or move of the service. A nonrecurring charge is also applicable when changing a service from one data rate to another or when changing the Permanent Virtual Circuit (e.g., changing ISPs).

SDSL service is available in service level packages, and is based on the data transmission speeds chosen by the customer. Service level packages are defined by the data transmission speeds. Currently available service level packages are:

- SDSL Channel, 144 Kbps
- SDSL Channel, 256 Kbps
- SDSL Channel, 512 Kbps
- SDSL Channel, 768 Kbps
- SDSL Channel, 1.024 Mbps
- SDSL Channel, 1.544 Mbps

Data speeds set forth above are peak speeds. Actual speeds may be affected by loop distance and other factors, and are not guaranteed.
