ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL**

Switched Access Service, which is available to customers for their use in furnishing their services to end users, provides a two-point electrical communications path between a customer's premises and an end user's premises. It provides for the use of terminating, switching, transport facilities and common subscriber plant of the Company. Switched Access Service provides for the ability to originate calls from an end user's premises to a customer's premises, and to terminate calls from a customer's premises to an end user's premises in the LATA where it is provided. Specific references to material describing the elements of Switched Access Service are provided in 6.1.1, following.

Rates and charges for Switched Access Service not subject to Phase II Pricing Flexibility are set forth in 6.8, following. Phase II Pricing Flexibility rates are specified in Section 16. The wire centers included in Phases I and II Pricing Flexibility are identified in Section 23.

The application of rates for Switched Access Service is described in 6.7, following. Rates and charges for services other than Switched Access Service, e.g., a customer's interLATA toll message service, may also be applicable when Switched Access Service is used in conjunction with these other services. Descriptions of such applicability are provided in 6.2.1.A.8., 6.2.1.B.5., 6.2.2.A.7., 6.2.2.B.4., 6.2.3.A.7., 6.2.4.A.5., 6.2.5.A.8., 6.2.5.B.4., 6.2.6.A.1.g., 6.2.6.A.2.d., 6.2.6.B.1.g., 6.2.6.C.1.e., 6.7.8 and 6.7.10, following. Finally, a credit is applied against Lineside Switched Access Service charges as described in 6.7.9, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL (Cont'd)****6.1.1 SWITCHED ACCESS SERVICE ARRANGEMENTS AND MANNER OF PROVISION**

Switched Access Service is provided by the following Lineside Access or Trunkside Access Basic Serving Arrangements (BSAs) and Feature Groups.

LINESIDE ACCESS**BUNDLED**

Feature Group A

UNBUNDLED

Circuit Switched Lineside

TRUNKSIDE ACCESS**BUNDLED**Feature Group B
Feature Group C
Feature Group D**UNBUNDLED**Circuit Switched Trunkside
Option 1
Option 2
Option 3

The names of the BSAs are identified in Bell Operating Companies ONA Special Report #5, Issue 2.1 updated July 31, 1991, as Circuit Switched Lineside BSA and Circuit Switched Trunkside BSA.

Circuit Switched Lineside (CSL) and Circuit Switched Trunkside (CST) are provided as unbundled service arrangements and are available with various Basic Service Elements (BSEs) and optional features. CST Access is available in three different serving arrangements, CST-Option 1 (CST1), CST-Option 2 (CST2) and CST-Option 3 (CST3)[1]. CSL and CST BSAs and options are provided as set forth in 6.2.5 and 6.2.6, following.

[1] CST1, CST2 and CST3 are the unbundled service arrangements that are similar to FGs B, C and D.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.1 SWITCHED ACCESS SERVICE ARRANGEMENTS AND MANNER OF PROVISION (Cont'd)

Feature Groups are available with various BSEs and optional features. The Feature Groups are provided as set forth in 6.2.1, 6.2.2, 6.2.3 and 6.2.4, following.

No customer can have Feature Group arrangements and unbundled BSAs at the same time in the same LATA.

Nonrecurring charges will be applied as set forth in 6.7.1., following.

DID Switched Access Service is available on a bundled or unbundled basis and is described in 6.2.7, following. 800 DB Access Service, 900 Access Service, Dedicated Network Access Links (DNALs), Switched Data Services and 500 Access Service are available and are described in 6.2.8, 6.2.9, 6.2.10, 6.2.11 and 6.2.12, following.

The BSAs and Feature Groups are differentiated by their technical characteristics, e.g., lineside vs. trunkside connection at the Company entry switch, and the manner in which an end user accesses them in originating calling, e.g., with or without an access code.

Lineside Access (CSL and FGA) is furnished on a per-line basis. Trunkside Access (CST and FGs B, C and D) and *DID* Switched Access is furnished on a per-trunk basis.

Trunks are differentiated by type and directionality of traffic carried over a Switched Access Service arrangement. Differentiation among traffic types is necessary for the Company to design Switched Access Service properly to meet the traffic carrying capacity requirement of the customer.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.1 SWITCHED ACCESS SERVICE ARRANGEMENTS AND MANNER OF PROVISION (Cont'd)

There are seven major traffic types. These are Originating, Terminating, Voice Directory Assistance (Voice DA), *SWITCHNET 56*, CCC Originating, CCC Terminating and Operator Assistance Service.

- Originating traffic type represents access capacity within a LATA for carrying traffic from the end user to the customer.
- Terminating traffic type represents access capacity within a LATA for carrying traffic from the customer to the end user.
- Voice DA traffic type represents access capacity for carrying Regional Directory Assistance (RDA) or National Directory Assistance (NDA) traffic from the customer to a Voice DA location.
- *SWITCHNET 56* traffic type represents access capacity within a LATA for carrying digital traffic at speeds up to 56 kbps between the customer and the end user.
- CCC Originating traffic type represents access capacity within a LATA for carrying circuit switched data and/or circuit switched voice traffic on CST3 or FGD Service equipped with clear channel capability from the end user to the customer.
- CCC Terminating represents access capacity within a LATA for carrying circuit switched data and/or circuit switched voice traffic on CST3 or FGD Service equipped with Clear Channel Capability from the customer to the end user.
- Operator Assistance Service traffic type represents access capacity within a LATA for carrying operator assistance traffic to or from the customer's premises, to or from a Company-designated OAS tandem location.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.1 SWITCHED ACCESS SERVICE ARRANGEMENTS AND MANNER OF PROVISION (Cont'd)

When ordering capacity for Trunkside Switched Access, the customer must, at a minimum, specify such access capacity in terms of the following:

- Originating and/or Terminating traffic type,
- *SWITCHNET 56* traffic type,
- CCC Originating traffic type and/or CCC Terminating traffic type,
- Voice DA traffic type is used for ordering Voice DA Access Service as set forth in Section 9, following, and
- Operator Assistance Service traffic type.
- Additionally, when ordering capacity for 500 Access Service, 800 DB Access Service and/or 900 Access Service, the customer must specify 5YY, 8XX and/or 900 traffic type.

Because some customers will wish to segregate their originating CST2, CST3, FGC, FGD, 500 Access Service, 800 DB Access Service, or 900 Access Service traffic further into separate trunk groups, the Originating traffic type and CCC Originating traffic type are further categorized into Domestic, 5YY, 8XX, 900, Operator and IDDD as described following:

- Domestic traffic type represents access capacity for carrying only domestic traffic other than 5YY, 8XX, 900 and Operator traffic.
- IDDD traffic type represents access capacity for carrying only international traffic.
- 5YY, 8XX, 900 and Operator traffic type represents access capacity for carrying, respectively, only 5YY, 8XX, 900 or Operator traffic.

When such a customer wishes to segregate traffic as described above, the customer must specify Domestic, 5YY, 8XX, 900, Operator or IDDD traffic type.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

**6.1.1 SWITCHED ACCESS SERVICE ARRANGEMENTS AND MANNER OF PROVISION
(Cont'd)**

When Switched Access Service connects to Expanded Interconnection-Collocation (EIC) Service as set forth in Section 21, following, the Switched Access Service is provided at a DS1 or DS3 capacity connecting to an EIC Channel Termination DS1 or DS3. A Switched Transport Entrance Facility is not required. The designated serving wire center for Switched Access Services connecting to EIC Service is determined as follows:

- The wire center where the Telephone Company-designated point of interconnection exists for Virtual EIC will be the designated Switched Transport serving wire center and the customer point of interconnection for Switched Access Services.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL (Cont'd)****6.1.2 RATE CATEGORIES**

There are three rate categories which apply to Switched Access Service (see exception below for DNAL):

- Switched Transport (described in 6.1.2.A., following)
- Local Switching (described in 6.1.2.B., following)
- Common Line (described in Sections 3 and 4, preceding)

The DNAL (described in 6.2.10, following) is a Switched Transport flat-rated service and is not subject to the Local Switching or Common Line rate categories above.

In addition to the three rate categories, there are rate elements applicable to certain Switched Access services:

- 500 Access Service Charges, applicable to 500 Access Service provided in conjunction with CST1, CST2, CST3, Feature Group B, C or D. The description and application of these charges are set forth in 6.7.1, following.
- 800 DB Access Service Charges, applicable to 800 DB Access Service provided in conjunction with Trunkside Access. The description and application of these charges are set forth in 6.7.1, following.
- 900 Access Service Charges, applicable to 900 Access Service provided in conjunction with CST2, CST3, Feature Groups C, D and 900 Access Service (FGB-like). The description and application of these charges are set forth in 6.7.1, following.
- Dedicated Network Access Link Charges, applicable to DNAL service, provided in conjunction with CSL or FGA access service provided with the Make Busy Arrangement, Message Delivery Service or Customer Identification-Bulk BSEs. The description and application of these charges are set forth in 6.7.1, following.
- Information Surcharge, applicable to all Interstate Switched Access Service minutes of use. The description and application of this rate element is set forth in 6.7.1.N., following.

ACCESS SERVICE

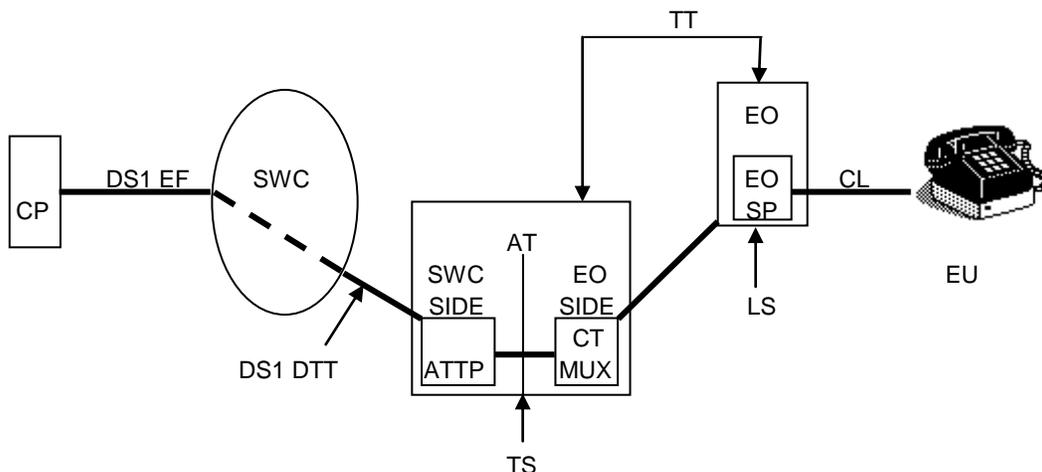

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES (Cont'd)

A. Switched Transport

1. General Description

The Switched Transport rate category provides the transmission facilities between the customer's premises and the end office switch(es) where the customer's traffic is switched to originate or terminate its communications.

Switched Transport is a two-way voice-frequency transmission path composed of an Entrance Facility (EF) and a Direct-Trunked Transport (DTT) facility for direct routed traffic. For tandem routed traffic, the Switched Transport is composed of an EF, a DTT to an access tandem and Tandem-Switched Transport (TST) from the access tandem to the subtending end offices. The transmission path permits the transport of calls in the originating direction (from the end user's end office switch to the customer's premises) and in the terminating direction (from the customer's premises to the end office switch), but not simultaneously. The voice-frequency transmission path may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

When a Switched Access Service connects to EIC Service as set forth in Section 21, following, the Switched Access Service designated serving wire center and customer point of interconnection are defined as set forth in 6.1.1, preceding.

The Company will work cooperatively with the customer in determining (1) the EF, (2) whether the service is to be directly routed or routed through an access tandem switch, (3) the directionality of the service and (4) hubbing arrangements. Switched Transport optional features are provided as set forth in 4., following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

- A. Switched Transport
1. General Description (Cont'd)

Switched Transport is provided at the rates and charges set forth in 6.8, following. The application of these rates with respect to the different types of service is as set forth in 6.7.1, following.

Switched Access is ordered under the access order provisions as set forth in Section 5, preceding. Design and traffic routing of Switched Access Service is described in 6.5.2, following.

Switched Transport is composed of an Entrance Facility (EF) rate category, as described in a., following, a Direct-Trunked Transport (DTT) rate category, as described in b., following and a Tandem-Switched Transport (TST) rate category, as described in c., following.

- a. Switched Transport EF Rate Category

An EF provides the communication path between a customer's premises and the Telephone Company serving wire center (SWC) of that premises for the sole use of the customer. The EF rate category is composed of a Voice Grade rate, a DS1 rate or a DS3 rate. An EF is provided even if the customer's premises and the SWC are located in the same building. The types of facilities available for Entrance Facilities are described in 2., following.

The EF rate category does not apply when Switched Access Service connects to EIC Service as set forth in Section 21, following.

When TRS is provided, as set forth in Section 13.14, following, an EF is assessed to the TRS provider for the communications path between the TRS provider's premises and the SWC of that premises and the 101XXXX provider is assessed an EF for the path between the IC's premises and the SWC of that premises.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES****A. Switched Transport****1. General Description (Cont'd)****b. Switched Transport DTT Rate Category**

DTT provides the transmission path on circuits dedicated to the use of a single customer between:

- the customer's SWC and an end office, or
- the customer's SWC and an access tandem, or
- the customer's SWC and a Company Hub where multiplexing functions are performed, or
- a Company Hub and an end office, or
- a Company Hub and an access tandem.

The DTT rate category is composed of a monthly fixed rate and a monthly per-mile rate based on the facility provided, (i.e., Voice Grade, DS1 or DS3). The fixed rate provides the circuit equipment at the ends of the transmission paths. The per-mile rate provides the transmission facilities, including intermediate transmission circuit equipment, between the end points of the circuit. The DTT rate is the sum of the fixed rate and the per-mile rate. For purposes of determining the per-mile rate, mileage will be measured as airline mileage using the V & H coordinates method. Mileage measurement rules are set forth in 6.7.11, following. The types of facilities available for DTT are described in 2., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

A. Switched Transport

1. General Description (Cont'd)

c. Switched Transport TST Rate Category

TST provides the transmission facilities between an access tandem and end offices subtending that tandem utilizing tandem switching functions. TST is not available from or to a Company Hub. TST consists of circuits used in common by multiple customers from the access tandem to an end office. For TST, the Company will determine the type of facilities to the end office(s) based on the customer's order for service on a per-trunk basis.

The TST rate category is composed of the rate elements set forth in (1) through (4), following. Rates and charges are set forth in 6.8, following.

(1) Tandem Transmission

Tandem Transmission is composed of a fixed per-MOU rate and per-mile/per-MOU rate. The fixed rate provides for the circuit equipment at the end of the interoffice transmission paths. The per-mile rate provides for the transmission facilities, including intermediate transmission circuit equipment between the end points of the interoffice circuit. For purposes of determining the per-mile rate, mileage will be measured as airline mileage using the V & H coordinates method. Mileage measurement rules are set forth in 6.7.11, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

A. Switched Transport

1. General Description

c. Switched Transport TST Rate Category (Cont'd)

(2) Tandem Switching

Tandem Switching is a per-MOU rate assessed for utilizing tandem switching functions when tandem routing is requested for trunkside services. Tandem Switching is not assessed to FGA or CSL services.

(3) Access Tandem Trunk Port

An access tandem trunk port (ATTP) is provided for each trunk terminated on the serving wire center side of the access tandem when the customer has requested tandem routing. The ATTP rate is assessed monthly per Feature Group or BSA trunk (excludes FGA and CSL).

(4) Common Transport Multiplexing

Common transport multiplexing equipment is utilized in the end office side of the access tandem when common transport is provided between the access tandem and the subtending end offices. This rate is assessed on a per-MOU basis. (Multiplexing equipment associated with a DTT facility ordered to the access tandem is provisioned on the SWC side of the access tandem. Multiplexing rates for EF and DTT facilities are described in A.4., following, and if assessed, are in addition to the common transport multiplexing rates.)

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

A. Switched Transport (Cont'd)

2. Switched Transport Facilities

Customers requesting Lineside or Trunkside Switched Access service shall specify the type of Entrance Facility (Voice Grade, DS1 or DS3) between the customer's premises and the SWC. The customer shall also specify if tandem routing or direct routing will be utilized for trunkside services. If tandem routing is desired, the customer must specify the type of DTT facility (Voice Grade, DS1 or DS3) to be utilized from the SWC to the access tandem and the Company will determine the type of facilities (i.e., common transport) to the subtending end offices. Tandem routing is not available for Lineside Switched Access Service. If direct routing is requested, the customer shall specify the type of DTT facility (Voice Grade, DS1 or DS3) to be utilized from the SWC to the end office.

There are three types of facilities, Voice Grade, DS1 or DS3 ordered and provided as set forth in this section, available to the customer for Entrance Facilities and DTT facilities for Lineside or Trunkside Switched Access Service.

Switched Access Service may be ordered in conjunction with DS3 Private Line Transport Service (PLTS), ordered and provided from Section 7, following, with a DS3 EF Electrical capacity of two or greater or any Optical Interface under the provisions of Shared Use only as set forth in 2.7, preceding.

Switched Access Service may also be ordered in conjunction with Synchronous Service Transport (SST) PLTS, with a high capacity channel for synchronous transmission of Optical Capacity (OC) bandwidth ranging from 155.52 Mbps (OC-3), 622.08 Mbps (OC-12), 1.244 Gbps (OC-24), 2.488 Gbps (OC-48) or 9.952 Gbps (OC192) under the provisions of Shared Use only as set forth in 2.7, preceding.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

A. Switched Transport

2. Switched Transport Facilities (Cont'd)

Following is a brief description of each type of facility available for Switched Access Service. Each type has its own characteristics and is available with EF and DTT multiplexing options as set forth in 4., following.

a. Voice Grade Facility

Voice Grade facilities are available for Entrance Facilities and for DTT facilities. A Voice Grade facility is an electrical communications path which provides voice-frequency transmission in the nominal frequency range of 300 to 3000 Hz and may be terminated two-wire or four-wire. Compatible Interface Groups are described in 3., following.

b. DS1 Facility

DS1 facilities are available for Entrance Facilities and for DTT facilities. A DS1 facility is capable of transmitting electrical signals at a nominal 1.544 Mbps, with the capability to channelize up to 24 voice-frequency transmission paths. Compatible Interface Groups are described in 3., following.

c. DS3 Facility

DS3 facilities are available for Entrance Facilities and DTT facilities. A DS3 facility is capable of transmitting electrical signals at a nominal 44.736 Mbps, with the capability to channelize up to 672 voice-frequency transmission paths. Compatible Interface Groups are described in 3., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

A. Switched Transport (Cont'd)

d. Hubbing

Hubbing arrangements requested from the SWC to a hub location, or from one hub location to a different hub location, shall be ordered out of this section as DTT for Switched Access only. Hubbing arrangements ordered from Section 7 for the provision of Shared Use services can be utilized for both PLTS and Switched Access Service.

When the SWC is in the same wire center building as an end office, access tandem and/or hub, the customer must order DTT from the SWC as set forth in A.1. and 2., preceding. A multiplexing function performed in the SWC for an EF is not a hubbing arrangement.

A hub is a Company designated wire center, other than the SWC, at which multiplexing functions are performed. Hubbing allows the customer to terminate a DTT facility to a hub so that the facility can be de-multiplexed to a lower capacity and the lower capacity DTT facility is then routed to an access tandem, end office or another hub. When the customer requests DTT from the SWC to a hub and facilities from the hub to an access tandem, the customer must order DTT from the hub to the access tandem and TST from the access tandem to end offices subtending that tandem.

Multiplexing functions for EF and DTT facilities are described in 4., following. Hub locations and the types of multiplexing available at each location for DS1 facilities are specified in the NECA Tariff F.C.C. No. 4. For DS3 facilities, the Company will work cooperatively with the customer to provide the desired hubbing arrangements.

For service rearrangements introducing or changing a hub location, see 6.7.1.C.7., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

A. Switched Transport (Cont'd)

3. Interface Groups

Four Interface Groups are provided for terminating Switched Transport at the customer's premises. Each Interface Group provides a specified premises interface (e.g., two-wire, four-wire, DS1, etc.). Where transmission facilities permit, the individual transmission path between the customer's premises and the first point of switching may, at the option of the customer, be provided with optional features as set forth in 4., following.

As a result of the customer's access order and the type of Company transport facilities serving the customer's premises, the need for signaling conversions or two-wire to four-wire conversions, or the need to terminate digital or high frequency facilities in channel bank equipment, may require that Company equipment be placed at the customer's premises. For example, if a voice-frequency interface is ordered by the customer and the Company facilities serving the customer's premises are digital, then Company channel bank equipment must be placed at the customer's premises in order to provide the voice-frequency interface ordered by the customer.

Interface Group Transmission Specifications and Data Transmission Parameters are delineated in Technical Reference GR-334-CORE.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

- A. Switched Transport
- 3. Interface Groups (Cont'd)

Only certain Network Channel Interface codes (NCI) are available at the customer's premises. The NCI codes associated with the Interface Groups may vary among different types of service based on the technical requirements. The various premises interfaces which are available with the Interface Groups, and the types of service with which they may be used, are set forth in e., following.

Based upon the Interface Group chosen by the customer, EF and DTT multiplexing arrangements may be required. Multiplexing arrangements are described in 4., following.

When Switched Access Service is ordered in conjunction with Private Line Transport Service provisioned with an Electrical capacity of two or greater or any Optical Interface, the common interface is provisioned under the rules and regulations for Shared Use referenced in 2.7, preceding. Technical specifications are delineated in Qwest Corporation Technical Publication PUB 77324.

When Interface Groups 1, 2, 6 or 9 are associated with CST3 or FGD Service with SS7 out of band signaling, no signaling will be done via the message channel.

When *SWITCHNET 56* Service is ordered in conjunction with CST3 or FGD, it requires the use of a separate trunk group equipped with Interface Group 6. This service allows a customer to establish a connection between the customer's premises and a suitably equipped end user premise over facilities capable of transmitting digital data at 56 kbps.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

- A. Switched Transport
3. Interface Groups (Cont'd)

a. Interface Group 1

Interface Group 1, except as set forth in the following, provides two-wire voice-frequency transmission at the customer's premises.

Interface Group 1 is not provided in association with Trunkside Access when the first point of switching is an access tandem. In addition, Interface Group 1 is not provided in association with Trunkside Access when the first point of switching provides only four-wire terminations.

b. Interface Group 2

Interface Group 2 provides four-wire voice-frequency transmission at the customer's premises.

c. Interface Group 6 - BSE

Interface Group 6 provides DS1-level digital transmission at the customer's premises. The interface may be provided with Clear Channel Capability (BSE).

d. Interface Group 9

Interface Group 9 provides DS3-level digital transmission at the customer's premises.

e. Available Premises Interface Codes

The NCI codes available for each Interface Group are set forth in Qwest Corporation Technical PUB 77203. The provision of some NCI codes generally requires placement of the Company equipment at the customer's premises.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

A. Switched Transport (Cont'd)

4. Optional Features

Where transmission facilities permit, the Company will, at the option of the customer, provide the following Switched Transport optional features at the rates and charges set forth in 6.8, following.

a. POT Supervisory Signaling Arrangements

Where the transmission parameters permit, and where signaling conversion is required by the customer to meet its signaling capability, the customer may order a POT supervisory signaling arrangement for each transmission path. Available supervisory signaling arrangements for Lineside and Trunkside terminations are set forth in 3., preceding. Technical specifications for supervisory signaling are delineated in Technical Reference GR-334-CORE.

b. Customer Specified Entry Switch Receive Level

This feature allows the customer to specify the receive transmission level at the first point of switching. The range of transmission levels which may be specified is described in Technical Reference GR-334-CORE. This feature is available with Interface Groups 2, 6 and 9 for CSL, CST1, Feature Groups A and B.

c. Customer Specification of Switched Transport Termination

This option allows the customer to specify, for CST1 or for Feature Group B routed directly to an end office or an access tandem, a four-wire termination of the Switched Transport at the entry switch in lieu of a Company selected two-wire termination. This option is available only when the CST1 or Feature Group B arrangement is provided with Transmission Type B1 performance.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

A. Switched Transport

4. Optional Features (Cont'd)

d. Self Healing Alternate Route Protection (SHARP)

Self Healing Alternate Route Protection (SHARP) provides added reliability to Trunkside Switched Access Service transported over fiber optic facilities. This feature provides a separate facility path for the protection system between the Telephone Company serving wire center and the Telephone Company point of termination located in the same building as the customer's designated premises.

This added protection is provided by ensuring that backup electronics and two physically separate facility paths are used in the provisioning of the service. A primary (or working) service path is established between the serving wire center and the customer designated premises. A secondary (or protect path) is provisioned on a Company provided fiber based DS1 or DS3 facility between the customer designated premises and the serving wire center via a Telephone Company designated alternate wire center. Due to constraints of the local network architecture as determined by the Telephone Company, there may be occasions where the service will be provisioned without the use of an alternate wire center. Should the working path or electronics fail, or the service performance becomes impaired, the service will automatically switch to the service protect path in order to maintain a near continuous flow of information between locations.

This optional feature is only available for Entrance Facilities with Trunkside Switched Access Services associated with Interface Groups 6 and 9.

When a customer desires SHARP protection for a particular trunk group, all trunks in that trunk group must be ordered with the SHARP optional feature.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

A. Switched Transport

4. Optional

d. Self Healing Alternate Route Protection Features (SHARP) (Cont'd)

The Company will establish, at a minimum of one DS1 SHARP facility, the number of DS1 or DS3 SHARP facilities required.

Technical Specifications for SHARP are delineated in Qwest Corporation Technical Publication PUB 77340.

Rates and charges are described as set forth in 6.7.1., following.

The offering of SHARP requires the use of existing fiber optic facilities. Should facilities not be available, it may be necessary to construct such facilities either as (1) normal or (2) Special Construction. If Special Construction is involved, the regulations as set forth in CenturyLink Operating Companies Tariff F.C.C. No. 12, 2.6.4.D.1., apply. For a list of facility locations where SHARP may be available as normal construction, see National Exchange Carrier Association Inc., Tariff F.C.C. No. 4.

e. Multiple POTs Tandem Sectorization (MPTS)[1]

Multiple POTs Tandem Sectorization (MPTS) is an optional feature designed to meet the traffic routing requirements of customers whose CST2, CST3, Feature Group C and D originating Switched Access Services are routed through an access tandem from multiple customer points of termination (POTs).

[1] Effective February 20, 1999, MPTS is limited to existing customers on existing MPTS trunk groups only. Customers with MPTS in service may augment existing MPTS trunk groups until the service is moved or disconnected. If the service is moved or disconnected, MPTS may not be reestablished.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

- A. Switched Transport
 - 4. Optional
 - e. Multiple POTs Tandem Sectorization (MPTS) (Cont'd)

MPTS is available in connection with originating CST2, CST3, Feature Group C and D Services. MPTS allows originating CST2, CST3, Feature Group C and D traffic to be directed via an access tandem to a specific POT designated by the customer. MPTS permits customers with multiple customer points of termination (POTs) within a tandem serving area to balance the call volume within their respective networks. MPTS may be used in conjunction with the Common Switching Optional Feature Service Class Routing (e.g., 8XX, 900, Operator), as specified in 6.3.1, following, with the exception of *SWITCHNET*.

End offices subtending the tandem serving area will be divided into sectors, referred to as CST2, CST3, Feature Group C and D Tandem Sectors, which will be defined by the Company. Each tandem sector must be treated as a unit and cannot be subdivided. Tandem sectors are standard for all customers who purchase MPTS. MPTS must be ordered to every sector of an access tandem. A customer with multiple POTs within the tandem serving area can designate to which POT the traffic from a specific tandem sector will be routed. For example, a customer with multiple POTs can request that all originating calls from a tandem sector be directed to a single POT. In addition, originating traffic from a different tandem sector could be routed to the same POT or a different POT as designated by the customer.

Tandem routed traffic can be delivered to a minimum number of two POTs and a maximum number of POTs that is less than or equal to the number of tandem sectors defined for a particular tandem. The end offices associated with the tandem sectors can be found in the Qwest Corporation Tandem Sectorization Guide.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

- A. Switched Transport
- 4. Optional
- e. Multiple POTs Tandem Sectorization (MPTS) (Cont'd)

The Company shall not be required to route traffic from a tandem sector to more than one POT unless the customer has the optional feature, Service Class Routing as described in 6.3.1.L., following, in addition to MPTS. Tandem routed traffic with Service Class Routing can be delivered by traffic type to a minimum number of one POT and a maximum number of POTs that is less than or equal to the number of tandem sectors defined for a particular tandem. A maximum number of four (4) trunk groups with mixed traffic types in accordance with the Service Class Routing specifications is allowed for each designated tandem sector. Each traffic type (e.g., 8XX, 900, MTS) within a tandem sector can be designated to the same POT or different POTs. A customer with multiple POTs must direct all originating calls from a tandem sector to a single POT by traffic type.

MPTS in conjunction with Service Class Routing - A customer may designate one to four POTs per traffic type. For example, when MPTS is ordered for a specific tandem, it is possible to route all of a particular traffic type (e.g., 8XX or Operator) to only one POT subtending that tandem, as long as other traffic type(s) comply to the stated MPTS guidelines of directing traffic to multiple POTs within a tandem serving area as referred to in 6.3.1.L., following.

MPTS in conjunction with Alternate Traffic Routing - If a customer wants a direct trunk group from an end office to alternate route to a tandem routed trunk group subtending the same end office, the customer can designate the direct routed traffic sent to any POT, but the tandem routed trunk group must be routed to the customer designated point of termination (POT) that is specified for the tandem sector as referred to in 6.3.1.M., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

- A. Switched Transport
 - 4. Optional (Cont'd)
 - f. Multiplexing for EF and DTT facilities

Multiplexing provides the capability of converting the capacity or bandwidth of a facility from a higher level to a lower level or from a lower level to a higher level. Multiplexing functions for an EF are available at a SWC. For DTT facilities, multiplexing is available at a Company Hub, end office or access tandem. Multiplexing arrangements are associated with the facility with the higher capacity or bandwidth (e.g., a DS1 to Voice Grade multiplexing arrangement is associated with the facility using a DS1 connection). (Common transport multiplexing, as described in A.1, preceding, is provided on the end office side of the access tandem when tandem routing is requested.)

EF and DTT multiplexing arrangements may be connected to an Expanded Interconnection-Collocation Channel Termination as set forth in Section 21, following.

EF and DTT multiplexing arrangements are described following.

DS1 to Voice Grade

DS1 to Voice Grade multiplexing is an arrangement that provides a Company multiplexer which converts a DS1 channel to twenty-four Voice Grade channels utilizing time division multiplexing. For example, the customer has the option of ordering a DS1 to Voice Grade multiplexer for a DS1 Entrance Facility at the SWC when Voice Grade DTT is requested to an end office.

DS3 to DS1

DS3 to DS1 multiplexing is an arrangement which converts a DS3 channel to twenty-eight DS1 channels utilizing time division multiplexing. The twenty-eight channels may be further multiplexed utilizing DS1 to Voice Grade multiplexing equipment.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES**

- A. Switched Transport
- 4. Optional
- f. Multiplexing for EF and DTT facilities (Cont'd)

EF and DTT multiplexing equipment is provided at no charge by the Company (at a location determined by the Company as part of its overall network design) when the following conditions exist:

- a DTT at a DS1 level is requested from a SWC to an access tandem in conjunction with TST from an access tandem to subtending end offices, or
- a DS1 DTT facility terminates in an end office except when Lineside and Trunkside Access are combined on the same facility.

If the customer chooses to order multiplexing equipment at a location other than the location determined by the Company, the customer will be assessed EF and DTT multiplexing rates and charges.

EF and DTT multiplexing arrangements are required and the customer is assessed multiplexing rates and charges as set forth in 6.8, following, when the following conditions exist:

- a DS3 EF facility is requested, or
- a DS3 EF connects to a DS1 DTT facility, or
- a DS3 EF is requested with a DS3/DS1 multiplexer and a DS1/DS0 multiplexer for connection to a Voice Grade DTT facility, or
- a DS1 EF connects to a Voice Grade DTT facility, or
- a higher capacity DTT facility connects to a lower capacity DTT facility at a Company Hub, or
- a DS1 DTT facility transports a combination of Lineside and Trunkside Access to an end office on the same facility, or
- Shared Use facilities are requested.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

A. Switched Transport

4. Optional (Cont'd)

g. Tandem Signaling Information Option

Tandem Signaling Information (TSI) is an option of a DTT facility that routes traffic direct to an end office, not through a Company provided tandem. TSI provides the capability of transporting in-band (MF) or out of band (SS7) signaling information over EF and DTT facilities for the purpose of providing tandem signaling information between a customer-provided tandem switch premises and a Company end office. In-band TSI provides the Carrier Identification Code (CIC) which identifies the interexchange carrier and the 0ZZ code which identifies the interexchange carrier trunk to which traffic should be directly routed. For out of band TSI, the CIC and 0ZZ code equivalent is provided in the Transit Network Selection (TNS) and the Network Identification Code (NIC) of the SS7 parameter initial address message. When a customer requires TSI to be provided out of band, the customer must order CCSAC service using the Common Channel Signaling Network (CCSN) as set forth in Section 20, following.

When TSI is ordered on a directly routed DTT facility, only CST3 or FGD Service may be transported over the facility.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES (Cont'd)****B. Local Switching**

The Local Switching rate category provides the local end office switching, end user line termination and intercept functions necessary to complete the transmission of Switched Access Communications to and from the end users served by the local end office. The Local Switching rate categories are described following. Local Switching rates are set forth in 6.8, following. The application of these rates with respect to the different types of service is as set forth in 6.7.1, following.

1. Local End Office Switching Functions**a. Common Switching**

Common Switching provides the local end office switching functions associated with the various access switching arrangements. The services arrangements (e.g., Features Group Arrangements and BSAs) are described in 6.2, following.

Included as part of Common Switching are various optional features and BSEs which the customer can order to meet its specific communications requirements. These optional features and BSEs are described in 6.3.1, following.

b. Transport Termination

Transport Termination provides for the lineside or trunkside arrangements which terminate the Switched Transport facilities. Included as part of Transport Termination are various optional termination arrangements and BSEs. These optional terminating arrangements and BSEs are described in 6.3.2, following.

The number of Transport Terminations provided for the lineside or trunkside arrangement will be determined by the Company as set forth in 6.5.8, following. The number of transmission paths will be determined as set forth in 6.5.7, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

B. Local Switching (Cont'd)

2. Line Termination Functions

WATS Access Line Terminations are provided for end user lines terminating in the local end offices.

The WATS Access Line Terminations are differentiated by line vs. trunk-side terminations. In addition, there are various types of originating and terminating line-side terminations depending on the type of signaling associated with the WATS Access Line. Line-side terminations are available with either dial-pulse or dual-tone multifrequency address signaling.

Trunk-side terminations are available for WATS Access Lines equipped with Answer Supervision. Only originating WATS Access Lines may be ordered with the Answer Supervision optional feature. The terminations for Answer Supervision use reverse battery type supervisory signaling. The reverse battery and E&M interfaces for two-wire or four-wire may be provided where operating conditions permit. For other technical details see Technical Reference GR-334-CORE.

3. Intercept Function

The Intercept Function provides for the termination of a call at a Company Intercept operator or recording. The operator or recording tells a caller why a call, as dialed, could not be completed, and if possible, provides the correct number.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.2 RATE CATEGORIES

B. Local Switching (Cont'd)

4. Local Switching Rate Categories

- a. The Local Switching per-MOU rate element is divided into four distinct categories, LS1 and LS2 for Feature Group arrangements, LS3 and LS4 for CSL and CST serving arrangements.

LS1 provides local dial switching for Feature Groups A, B and bundled DID, except for FGA and FGB used to terminate traffic to a WATS Access Line provided from an end office.

LS2 provides local dial switching for Feature Groups C and D, for FGA and FGB used to terminate traffic to a WATS Access Line provided from an end office, and for Feature Groups A and B originating or terminating access minutes when the service is provided to customers who furnish interstate MTS/WATS.

LS3 provides local dial switching for CSL, CST1 and unbundled DID service, except for CSL and CST1 used to terminate traffic to a WATS Access Line provided from an end office.

LS4 provides local dial switching for CST2 and CST3, for CSL and CST1 used to terminate traffic to a WATS Access Line provided from an end office, and for CSL and CST1 originating or terminating access minutes when the service is provided to customers who furnish interstate MTS/WATS.

Where end offices are appropriately equipped, international dialing may be provided as a capability associated with LS2 and LS4. International dialing provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard CST2, CST3, FGC or FGD equipped end office.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL****6.1.2 RATE CATEGORIES****B. Local Switching****4. Local Switching Rate Categories (Cont'd)****b. End Office Shared Port**

The End Office Shared Port rate provides for the termination of common transport trunks in shared end office ports and in remote switching system or module (RSS or RSM) ports. The End Office Shared Port rate is assessed on a per-MOU basis to all trunkside originating and terminating access minutes utilizing tandem routing to an end office. If tandem routing is being utilized to a RSS or RSM (via a host office), the shared port rate is assessed to the access minutes originating or terminating from that RSS or RSM and is not assessed at the host office. If the customer has requested direct routing from the SWC to a RSS or RSM (via a host office), the End Office Shared Port rate is assessed to the access minutes originating or terminating from the RSS or RSM. This rate is in addition to the End Office Dedicated Trunk Port rate assessed for the dedicated trunk terminating in the host office as described below. The port charge is not assessed to FGA, CSL or Voice DA traffic.

c. End Office Dedicated Trunk Port

The End Office Dedicated Trunk Port rate provides for termination of a trunk to a dedicated trunk port in an end office. The rate is assessed per month for each FG or BSA trunk in service (excludes FGA and CSL) directly routed (via DTT) between the SWC and the end office. The rate is not assessed to trunks directly routed to a Voice DA location.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.1 GENERAL (Cont'd)****6.1.3 SPECIAL FACILITIES ROUTING**

Any customer may request that the facilities used to provide Switched Access Service be specially routed. The regulations, rates and charges for Special Facilities Routing (i.e., Diversity) are as set forth in Section 11, following.

6.1.4 DESIGN LAYOUT REPORT

The Company will provide to the customer the makeup of the facilities and services provided from the customer's premises to the first point of switching or from the customer's point of interconnection to the first point of switching when Switched Access Service connects to EIC Service, as set forth in Section 21, following. This information will be provided in the form of a Design Layout Report. Design Layout Reports will also be provided for designed WATS Access Lines (i.e., the Private Line Transport Services) in acceptance with the provisions of 7.1.C., following. The Design Layout Report will be provided to the customer at no charge, and will be reissued or updated whenever these facilities are materially changed.

6.1.5 ACCEPTANCE TESTING

At no additional charge, the Company will perform acceptance testing at the time of installation. Acceptance tests will be performed to insure that the service is operational and meets applicable technical parameters. The Company will, at the customer's request, schedule a mutually agreeable time to perform acceptance testing in cooperation with the customer. If the customer is unable to participate in the acceptance testing, or if the customer requests that service installation be completed, without their presence, the service is assumed to be accepted (i.e., blind acceptance) by the customer.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.1 GENERAL (Cont'd)

6.1.6 ORDERING OPTIONS AND CONDITIONS

Switched Access Service is ordered under the Access Order provisions set forth in Section 5, preceding. Also included in that section are other charges which may be associated with ordering Switched Access Service (e.g., Cancellation Charges, etc.).

6.1.7 SPECIAL HIGH VOLTAGE PROTECTIVE APPARATUS

If Switched Access Service terminates in a high voltage environment, such as an electric power station, Special High Voltage Protective Apparatus may be required as set forth in 13.7, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE**

Switched Access Service is provided in different serving arrangements. The provision of each type of Switched Access Service requires transport facilities (Entrance Facilities, DTT facilities, and TST facilities for tandem routed traffic), multiplexing equipment and the appropriate local switching functions. In addition, WATS Access Lines, as provided in Section 7, following, may, at the option of the customer, be provided for use with Lineside and Trunkside Access.

Transmission Types (i.e., A1, B, B1 and C) have been identified for the provision of Switched Access Services. The Transmission Types are dependent on the Interface Group and the routing of the service, i.e., whether the service is routed directly to the end office or via an access tandem. The standard parameter limits for the Transmission Types are set forth in 6.4, following, and in Technical Reference GR-334-CORE.

Serving arrangements are arranged for either originating, terminating or two-way calling, based on the customer end office switching capacity ordered. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the customer's premises. Terminating calling permits the delivery of calls from the customer's premises to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously. The Company will determine the type of calling to be provided unless the customer requests that a different type of directional calling is to be provided. In such cases, the Company will work cooperatively with the customer to determine the directionality.

There are various optional features and BSEs available with Switched Access Service. These additional features are provided as Switched Transport, Common Switching, Transport Termination and Line Termination.

Following are detailed descriptions of each of the available Switched Access Services. Each service is described in terms of its specific physical characteristics and calling patterns, the transport provisioning, the transmission specifications with which it is provided, the optional features and BSEs available for use with it and the standard testing capabilities.

The Common Switching, Transport Termination, and Line Termination optional features and BSEs, which are described in 6.3, following, unless specifically stated otherwise, are available at all Company end office switches.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)

6.2.1 FEATURE GROUP A (FGA)

A. Description

1. FGA Access, which is available to all customers, provides a line-side termination to Company end office switches for the customer's use in originating communications from and terminating communication to an Interexchange Carrier's interstate service or a customer-provided interstate communications capability. The customer must specify the Interexchange Carrier to which the FGA Service is connected or, in the alternative, specify the means by which the FGA Access communication is transported to another state.
2. FGA is provided in connection with Company electronic and electromechanical end offices. FGA may be transported via a DS3, DS1 or Voice Grade Entrance Facility and via a DS3, DS1 or Voice Grade DTT facility. When the customer orders FGA and Trunkside Access to be transported via the same DTT facility, DS1 to Voice Grade multiplexing equipment is always required at the end office at the rates and charges set forth in 6.8, following. When the customer does not combine FGA and Trunkside Access on the same facility, the Company will provide DS1 to Voice Grade multiplexing equipment at no charge. At the option of the customer, FGA is provided on a single or multiple line group basis and is arranged for originating calling only, terminating calling only, or two-way calling.
3. FGA provides a line-side termination at the first point of switching. The line-side termination will be provided with either ground-start supervisory signaling or loop-start supervisory signaling. The type of signaling is at the option of the customer.
4. The Company shall select the first point of switching, within the selected LATA, at which the line-side termination is to be provided unless the customer requests a different first point of switching and Company facilities and measurement capabilities are available to accommodate such a request.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.1 FEATURE GROUP A (FGA)

A. Description (Cont'd)

5. A seven-digit local telephone number assigned by the Company is provided for access to FGA switching in the originating direction. The seven-digit local telephone number will be associated with the selected end office switch and is in the form NXX-XXXX.

If the customer requests a specific seven-digit telephone number that is not currently assigned, and the Company can, with reasonable effort, comply with that request, the requested number will be assigned to the customer.

6. FGA switching, when used in the terminating direction, is arranged with dial-tone start-dial signaling and dial-pulse address signaling. When used in the terminating direction, FGA switching may, at the option of the customer, be arranged for dual-tone multifrequency (DTMF) address signaling, subject to the availability of the equipment at the first point of switching. When FGA switching is provided in a hunt group or uniform call distribution arrangement, all FGA switching will be arranged for the same type of address signaling.
7. No address signaling is provided by the Company when FGA switching is used in the originating direction. Address signaling in such cases, if required by the customer, must be provided by the customer's end user using inband-tone signaling techniques. Such inband-tone address signals will not be regenerated by the Company and will be subject to the ordinary transmission capabilities of the Switched Transport provided.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.1 FEATURE GROUP A (FGA)

A. Description (Cont'd)

8. FGA switching, when used in the terminating direction, may be used to access valid NXX codes in the LATA, local operator service (0- and 0+), Voice DA (411 or 555-1212, whichever is available), emergency reporting service (911, where available), exchange telephone repair (611, where available), community information services of an information service provider, and other customers' services (by dialing the appropriate digits). Charges for FGA terminating calls requiring operator assistance, or calls to 611 or 911, will only apply where sufficient call details are available. Additional non-access charges will also be billed on a separate account for:
 - An operator surcharge, as set forth in the general and/or local exchange tariffs, for local operator assistance (0- and 0+) calls;
 - Calls to certain community information services in accordance with the Information Provider's applicable service rates when the Company performs the billing function for the Information Provider;
 - Calls from a FGA line to another customer's service in accordance with that customer's applicable service rates when the Company performs the billing function for that customer.
9. FGA calls terminating outside of the dial tone office are assessed Tandem Transmission rates in addition to the applicable Switched Access rates when calls are terminated within the dial tone office. Tandem Transmission mileage measurement is described in 6.7.11, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.1 FEATURE GROUP A (FGA)

A. Description (Cont'd)

10. FGA calls to Voice DA (411 or 555-1212, whichever is available), are subject to the Voice DA Service Call rate as set forth in 9.6.1.A., following, and are not subject to Switched Access rates as set forth in Section 6.
11. When a FGA switching arrangement for an individual customer (a single line or entire hunt group) is discontinued at an end office, an intercept announcement is provided. This arrangement provides, for a limited period of time, an announcement that the service associated with the number dialed has been disconnected.
12. Use of certain optional features and BSEs, available in B., following, may result in additional usage charges. For example, if a customer orders Three-Way Calling, additional Switched Access Service usage rates could apply if the customer establishes two calls.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.1 FEATURE GROUP A (FGA) (Cont'd)

B. Optional Features and BSEs

1. Switched Transport Optional Features

- Supervisory Signaling
- Customer Specified Entry Switch Receive Level

2. Common Switching Optional Features and BSEs

- Call Denial
- Service Code Denial
- Hunt Group Arrangement
- Uniform Call Distribution Arrangement
- Nonhunting Number for Use with Hunt Group Arrangement or Uniform Call Distribution Arrangement
- WATS Access Service
- InterLATA Toll Denial
- Call Transfer (BSE)
- Three-Way Calling (BSE)
- Caller Identification - Number (BSE)

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.1 FEATURE GROUP A (FGA)

B. Optional Features and BSEs

2. Common Switching Optional Features and BSEs (Cont'd)

- Caller Identification - Bulk (BSE)
- Message Delivery Service (BSE)
- Message Delivery Service - Interoffice (BSE)
- Make Busy (BSE)
- Call Forwarding Variable (BSE)
- Queuing for Use With UCD (BSE)

3. Transport Termination Optional Features

- Two-way operation with dial-pulse address signaling and loop-start supervisory signaling
- Two-way operation with dial-pulse address signaling and ground-start supervisory signaling
- Two-way operation with dual-tone multifrequency address signaling and loop-start supervisory signaling
- Two-way operation with dual-tone multifrequency address signaling and ground-start supervisory signaling
- Terminating operation with dial-pulse address signaling and loop-start supervisory signaling

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.1 FEATURE GROUP A (FGA)**

B. Optional Features and BSEs

3. Transport Termination Optional Features (Cont'd)
 - Terminating operation with dial-pulse address signaling and ground-start supervisory signaling
 - Terminating operation with dual-tone multifrequency address signaling and loop-start supervisory signaling
 - Terminating operation with dual-tone multifrequency address signaling and ground-start supervisory signaling
 - Originating operation with loop-start supervisory signaling
 - Originating operation with ground-start supervisory signaling
4. Line Termination Optional Features and BSEs
 - Answer supervision - Lineside (BSE)
5. Certain other features which may be available in connection with Feature Group A are provided under the Telephone Company's state access tariff and/or local exchange service tariff. These are:
 - Custom Calling Features (excluding Three-Way Calling, Call Transfer, Caller Identification - Number and Call Forwarding Variable)
 - *MARKET EXPANSION LINE*
 - Bill Number Screening
 - IntraLATA extensions
 - Open Switching Interval Protection (OSIP)
 - Message Waiting Indication - Audible

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.1 FEATURE GROUP A (FGA) (Cont'd)****C. Transmission Performance**

FGA is provided with either Transmission Type B or Type C performance. The standard parameter limits associated with these Transmission Types are guaranteed to the first point of switching. Transmission Type C performance is provided with Interface Group 1 and Transmission Type B performance is provided with Interface Groups 2, 6 and 9, as available. Voice band Data Transmission Type DB parameter limits are provided with FGA to the first point of switching as delineated in Technical Reference GR-334-CORE.

D. Testing Capabilities

Where equipment is available and seven-digit access is provided, FGA can be tested in the terminating direction to balance (100-type) test line and milliwatt (102-type) test line. In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing and Non-Scheduled Testing are available as set forth in Section 13, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)****6.2.2 FEATURE GROUP B (FGB)****A. Description**

1. FGB Access, which is available to all customers, provides a trunk-side termination to Company end office switches for the customer's use in originating communications from and terminating communications to an Interexchange Carrier's interstate service or a customer-provided interstate communications capability. The customer must specify the Interexchange Carrier to which the FGB Service is connected or, in the alternative, specify the means by which FGB access communication is transported to another state.
2. FGB, when directly routed to an end office via DTT is provided at appropriately equipped Company electronic end office switches. When provided via Company designated electronic access tandem switches with TST, FGB switching is provided at Company electronic and electromechanical end office switches.
3. When Feature Group B service is directly routed to an end office, the Switched Transport configuration is composed of an Entrance Facility and a DTT facility to an end office. When Feature Group B is switched through an access tandem, the Switched Transport configuration is composed of an Entrance Facility, a DTT facility between the SWC and the access tandem and TST from the access tandem to the end offices subtending the access tandem. Multiplexing options are described in 6.1.2, preceding.
4. FGB is provided as a trunk-side termination through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with wink-start start-pulsing signals and answer-disconnect supervisory signals.
5. FGB switching is provided with multifrequency (MF) address signaling in both the originating and terminating directions. Address signals and address information required by the customer in the originating direction must be provided by the customer's end user using inband-tone signaling techniques except switching that has automatic number identification (ANI) or rotary dial station signaling. Such inband-tone address signals will not be regenerated by the Company and will be subject to the ordinary transmission capabilities of the Switched Transport provided.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.2 FEATURE GROUP B (FGB)****A. Description (Cont'd)**

6. The access code for non-8XX FGB Access Service switching is a uniform access code. The form of the uniform access code is 950-XXXX or 1 + 950-XXXX for carriers. These uniform access codes will be the assigned access numbers of all non-8XX FGB Access Service provided to the customer by the Company. No access code is required for FGB switching used to provide 800 DB Access Service. The telephone number dialed by the customer's end users is of the form 1+8XX+NXX-XXXX.

7. FGB switching, when used in the terminating direction, may be used to access valid NXX codes in the LATA, community information services of an information service provider, and other customers' services (by dialing the appropriate digits). When FGB is directly routed to an end office via DTT, only those valid NXX codes served by that end office may be accessed. When FGB is routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. Additional non-access charges will be billed for calls from an FGB trunk to another customer's service in accordance with that customer's applicable service rates when the Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 101XXXX, 950-XXXX (or 1+ 950-XXXX) access codes, local operator assistance (0- and 0+), Voice DA (411 or 555-1212, where available) and service codes 611 and 911. Calls will be completed to Voice DA (NPA+555-1212 or 555-1212) when FGB Switching is combined with Voice DA Switching. The combination of FGB Switched Access Service with Voice DA Service is provided as set forth in Section 9, following. FGB may not be switched, in the terminating direction to another Trunkside Switched Access Service.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.2 FEATURE GROUP B (FGB)

A. Description (Cont'd)

8. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where FGB switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGB switching arrangement provided. Different types of FGB or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.
9. When all FGB switching arrangements are discontinued at an end office and/or in a LATA, an intercept announcement is provided. This arrangement provides, for a limited period of time, an announcement that the service associated with the number dialed has been disconnected.

B. Optional Features

1. Switched Transport Optional Features

- Customer Specification of Switched Transport Termination
- Supervisory Signaling
- Customer Specified Entry Switch Receive Level
- Self Healing Alternate Route Protection (SHARP)

2. Common Switching Optional Features

- Automatic Number Identification
- Up to 7-digit Outpulsing of Access Digits to customer
- Alternate Traffic Routing
- WATS Access Service (WATS)

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICES****6.2.2 FEATURE GROUP B (FGB)****B. Optional Features (Cont'd)****3. Line Termination Optional Features**

- Answer supervision for use with WATS Access Service

4. Another feature, Bill Number Screening, which may be available in connection with FGB, is provided under the Company's state access tariff and/or local exchange service tariffs.**C. Transmission Performance**

FGB is provided with Transmission Type B1 performance. Transmission Type B1 standard parameter limits apply to the transmission path routed directly (i.e., between the customer's premises and the end office) and to each segment of an access tandem connection. Transmission Type B1 performance is provided with Interface Groups 1, 2, 6 and 9, as available. Voice band data Transmission Type DB1 parameter limits are provided with FGB when routed directly and to each segment of an access tandem connection as delineated in Technical Reference GR-334-CORE.

D. Testing Capabilities

FGB is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100-type) test line, milliwatt (102-type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105-type) test line, data transmission (107-type) test line, loop around test line, short circuit test line and open circuit test line. In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, Manual Scheduled Testing and Non-Scheduled Testing are available as set forth in Section 13, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICES (Cont'd)

6.2.3 FEATURE GROUP C (FGC)

A. Description

1. FGC Access, which is available only to providers of MTS and WATS, provides a trunk-side termination to Company end office switches for the customer's use in originating and terminating communications.
2. FGC is provided at all Company end office switches on a direct trunk basis via DTT or via Company-designated access tandem switches with TST. FGC switching is provided to the customer (i.e., providers of MTS and WATS) at an end office switch unless Feature Group D end office switching is provided in the same office. When FGD switching is available, FGC switching will not be provided.
3. When Feature Group C service is directly routed to an end office, the Switched Transport configuration is composed of an Entrance Facility and a DTT facility to an end office. When Feature Group C is switched through an access tandem, the Switched Transport configuration is composed of an Entrance Facility, a DTT facility between the SWC and the access tandem and TST from the access tandem to the end offices subtending the access tandem. Multiplexing options are described in 6.1.2, preceding.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICES

6.2.3 FEATURE GROUP C (FGC)

A. Description (Cont'd)

4. FGC is provided as a trunk-side termination through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with answer and disconnect supervisory signaling. Wink-start start-pulsing signals are provided in all offices where available. In those offices where wink-start start-pulsing signals are not available, delay-dial start-pulse signaling is provided or immediate dial-pulse address signaling may be provided which allows dial pulses to be forwarded without a start-pulsing signal from the terminating office.
5. FGC is provided with multifrequency (MF) address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial-pulse, or immediate dial pulse, whichever is available. Up to 12-digits of the called party number will be forwarded by Company equipment to the customer's premises. Such called party number signals will be subject to the transmission and signaling capabilities of the Switched Transport provided.
6. No access code is required for FGC switching. For calls in the North American Numbering Plan (NANP), a 7- or 10- digit number may be dialed by the customer's end user after dialing the prefix 0 or 1. For calls outside the NANP, and, if the end office is technically equipped for International Direct Distance Dialing (IDDD), a 7- to 15- digit number may be dialed after dialing the prefix 011 or 01.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICES****6.2.3 FEATURE GROUP C (FGC)****A. Description (Cont'd)**

7. FGC switching, when used in the terminating direction, may be used to access valid NXX codes in the LATA, community information services of an information provider, and other customers' services (by dialing the appropriate codes) when the services can be reached using valid NXX codes. When FGC is directly routed to an end office via DTT, only those valid NXX codes served by that office may be accessed. When FGC is routed through an access tandem only those valid NXX codes served by offices subtending the access tandem may be accessed.

Additionally, non-access charges will also be billed for calls from a FGC trunk to another customer's service in accordance with that customer's applicable service rates when the Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 101XXXX, 950-XXXX (or 1+950-XXXX) access codes, local operator assistance (0- and 0+), Voice DA (411 or 555-1212) and service codes 611 and 911. Calls will be completed to Voice DA (NPA+555-1212 or 555-1212) when FGC switching is combined with Voice DA switching. The combination of FGC Switched Access Service with Voice DA Service is provided as set forth in Section 9, following. FGC may not be switched, in the terminating direction, to another Trunkside Switched Access Service.

8. The Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where FGC switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGC switching arrangement provided. Different types of FGC or other switching arrangements may be combined in a single trunk group at the option of the Company.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICES

6.2.3 FEATURE GROUP C (FGC)

A. Description (Cont'd)

9. The Company will provide 1+ interLATA sent-paid access from pay telephones utilizing Smart Public Access Lines via FGC for calls dialed as 1+ and/or 101XXXX 1+ in the following manner. 1+ interLATA sent-paid access from pay telephones utilizing Basic Public Access Lines Service shall be provided by FGD or CST3.
 - a. Smart Public Access Line (PAL)

For traffic originating from a Smart PAL, the customer to whom such calls are routed shall order FGC trunks from end offices to the customer's premises via direct trunks or via Operator Access Tandems, with the Operator Trunk-Full Feature type of transport termination, as set forth in 6.3.2, following. The trunks must be dedicated, and the customer shall specify the number of trunks required at each end office from which the customer will receive 1+ sent-paid traffic.

The customer is responsible for providing all other operator services signaling capabilities, as described in the Operator Services Systems Generic Requirements (OSSGR) Technical Reference FR-271 and the LATA Switching Systems Generic Requirements (LSSGR) Technical Reference FR-64.

When the Company provides Operator Services Signaling (OSS) between an Operator Access Tandem and the customer's premises, the customer will be required to order a separate and final trunk group from the Operator Access Tandem to the customer's premises for each Numbering Plan Area (NPA) within a LATA to identify the originating NPA. Also, the customer must order a separate trunk group for each type of coin control signaling that is utilized among the end offices subtending an Operator Access Tandem.

The Company will not block 101XXXX 1+ calls and will route 101XXXX 1+ interLATA sent-paid traffic in accordance to the end user request. It will be the responsibility of the 101XXXX 1+ dialed carrier to complete the casual 101XXXX 1+ interLATA sent-paid call or to provide a recorded message to the end user.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICES

6.2.3 FEATURE GROUP C (FGC)

A. Description

9.a. (Cont'd)

The Company will perform normal acceptance testing for sent-paid services for Smart PALs. In addition, the Company will perform testing for coin control and Operator Trunk-Full Feature (i.e., coin collect, coin return, 1+ person-to-person, operator recall, overtime, international direct distance dialing, and information calls). Test tapes must be received from the customer that will be processing the 1+ interLATA sent-paid traffic 45 days prior to the routing of said 1+ traffic to that customer. The Company will provide optional testing, at the request of the customer, as set forth in Section 13, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.3 FEATURE GROUP C (FGC) (Cont'd)

B. Optional Features

1. Switched Transport Optional Features

- Supervisory Signaling
- Multiple POP Tandem Sectorization (MPTS)
- Self Healing Alternate Route Protection (SHARP).

2. Common Switching Optional Features

- Automatic Number Identification
- Delay-Dial Start Pulsing Signaling
- Immediate Dial-Pulse Address Signaling
- Dial-Pulse Address Signaling
- Service Class Routing
- Alternate Traffic Routing
- Trunk Access Limitation
- WATS Access Service (WATS)

3. Transport Termination Optional Features

Operator Trunks - (i.e., Coin, Non-Coin or Combined Coin and Non-Coin)

4. Line Termination Optional Features

- Answer Supervision for Use With WATS Access Service

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.3 FEATURE GROUP C (FGC) (Cont'd)

C. Transmission Performance

FGC is provided with Transmission Type B1 performance. Transmission Type B1 standard parameter limits apply to the transmission path routed directly (i.e., between the customer's premises and the end office) and to each segment of an access tandem connection. Transmission Type B1 performance is provided with Interface Group 1, 2, 6 and 9, as available. Voice band data Transmission Type DB1 parameter limits are provided with FGC when directly routed and to each segment of an access tandem connection as delineated in Technical Reference GR-334-CORE.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.3 FEATURE GROUP C (FGC) (Cont'd)

D. Testing Capabilities

FGC is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100-type) test line, milliwatt (102-type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105-type) test line, data transmission (107-type) test line, loop around test line, short circuit test line and open circuit test line. In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing or Manual Scheduled Testing, and Non-Scheduled Testing are available as set forth in Section 13, following, for FGC.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)****6.2.4 FEATURE GROUP D (FGD)****A. Description**

1. FGD is provided at Company-designated end office switches whether routed directly to an end office or via Company-designated electronic access tandem switches. FGD is also provided at Company end office switches that subtend a TSP's premises when the DTT facility is equipped with TSI.
2. FGD, which is available to all customers, provides a trunk-side termination through the use of end office or access tandem switch trunk equipment. Wink-start, start-pulsing and answer-supervisory signaling are sent by the terminating office. Disconnect-supervisory signaling is sent from the originating or terminating office. When FGD uses SS7 out of band signaling, no signaling will be done via the message channel.
3. When Feature Group D service is directly routed to an end office, the Switched Transport configuration is composed of an Entrance Facility and a DTT facility to an end office. When Feature Group D is switched through an access tandem, the Switched Transport configuration is composed of an Entrance Facility, a DTT facility between the SWC and the access tandem and TST from the access tandem to the end offices subtending the access tandem. Multiplexing options are described in 6.1.2, preceding.
4. FGD switching is provided with multifrequency address signaling or SS7 out of band signaling. With multifrequency address signaling, up to 12 digits of the called party number dialed by the customer's end user using dual-tone multifrequency or dial-pulse address signals will be provided by Company equipment to the customer's premises where the Switched Access Service terminates. Such address signals will be subject to the ordinary transmission capabilities of the Switched Transport provided. With SS7 out of band signaling, up to 12 digits of the called party number dialed by the customer's end user using dual tone multifrequency or dial pulse address signals is provided by the Company equipment to the customer's designated premises via CCSAC links. SS7 out of band signaling requires the customer to order the SS7 out of band signaling optional feature, as set forth in 6.3, following, and CCSAC Service as set forth Section 20, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.4 FEATURE GROUP D (FGD)

A. Description (Cont'd)

5. FGD switching, when used in the terminating direction, may be used to access valid NXXs in the LATA, community information services of an information service provider, and other customer services (by dialing the appropriate codes) when such services can be reached using valid NXX codes. When directly routed to an end office via DTT, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed.

Terminating FGD, with tandem routing, may also, at the option of the customer, access valid NXX codes served by offices in which originating FGD is not available. Rating of this optional service is as set forth in 6.7.1.D.1., following.

Additional non-access charges will also be billed for calls from a FGD trunk to another customer's service in accordance with that customer's applicable service rates when the Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 101XXXX, 950-XXXX (or 1 + 950-XXXX) access codes, local operator assistance (0- and 0+), Voice DA (411 or 555-1212) and service codes 611 and 911. Calls will be completed to Voice DA (NPA+555-1212 or 555-1212) when FGD switching is combined with Voice DA Switching. The combination of FGD Switched Access Service with Voice DA Service is provided as set forth in Section 9, following. FGD may not be switched, in the terminating direction, to another Trunkside Switched Access Service except as set forth in 12., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.4 FEATURE GROUP D (FGD)

A. Description (Cont'd)

6. The Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where FGD switching is provided. When required by technical limitations, or in the case of *SWITCHNET 56*, a separate trunk group will be established for each type of FGD switching arrangement provided. Different types of FGD or other switching arrangements may be combined in a single trunk group at the option of the Company.
7. The uniform access code for FGD switching is 101XXXX. Uniform access codes will be the assigned access numbers of all FGD access provided to the customer by the Company. No access code is required for calls to a customer over FGD Switched Access Service when the end user's telephone exchange service is arranged for Interexchange Carrier (IC) Subscription as set forth in Section 13, following.

When no access code is required, the number dialed by the customer's end user shall be a 7- or 10- digit number after dialing the prefix 0 or 1 for calls in the North American Numbering Plan (NANP). For calls outside the NANP, and, if the end office is technically equipped for International Direct Distance Dialing (IDDD), a 7- to 15- digit number may be dialed after dialing the prefix 011 or 01.

When the 101XXXX access code is used, FGD switching also provides for dialing the digit 0 or 00 for access to the customer's operator, 911 for access to the Company's emergency reporting service, or at the customer's option, the end-of-dialing digit (#) for cut-through access to the customer's premises.

8. When *SWITCHNET 56* is provided with FGD, the standard FGD dialing pattern is used. This dialing pattern may vary according to the technology implemented in each specific Company end office and/or access tandem (i.e., in the originating direction, dialing #56 may be required dependent upon the switching technology.)
9. FGD switching will be arranged to accept calls from telephone exchange service locations without the need for dialing a 101XXXX uniform access code. Each telephone exchange service line may be marked with an IC Subscription code to identify the 101XXXX uniform access code its calls will be directed to for interLATA service. IC Subscription codes are applied as set forth in Section 13, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.4 FEATURE GROUP D (FGD)

A. Description (Cont'd)

10. The Company will provide 1+ interLATA sent-paid access from end offices to the customer's premises for calls dialed as 1+ and/or 101XXXX 1+ from pay telephones utilizing PAL Service, Smart and Basic, in the following manner.

- a. Smart PAL

For traffic originating from a Smart PAL, the customer to whom such calls are routed shall order FGD trunks from end offices to the customer's premises via direct trunks or via Operator Access Tandems, with the Operator Trunk-Full Feature type of transport termination, as set forth in 6.3.2, following. The trunks must be dedicated, and the customer shall specify the number of trunks required at each end office from which the customer will receive 1+ sent-paid traffic.

The customer is responsible for providing all other operator services signaling capabilities, as described in the Operator Services Systems Generic Requirements (OSSGR) Technical Reference FR-271 and the LATA Switching Systems Generic Requirements (LSSGR) Technical Reference FR-64.

When the Company provides Operator Services Signaling (OSS) between an Operator Access Tandem and the customer's premises, the customer will be required to order a separate and final trunk group from the Operator Access Tandem to the customer's premises for each Numbering Plan Area (NPA) within a LATA to identify the originating NPA. Also, the customer must order a separate trunk group for each type of coin control signaling that is utilized among the end offices subtending an Operator Access Tandem.

The Company will not block 101XXXX 1+ calls and will route 101XXXX 1+ interLATA sent-paid traffic in accordance to the end user request. It will be the responsibility of the 101XXXX 1+ dialed carrier to complete the 101XXXX 1+ interLATA sent-paid call or to provide a recorded message to the end user.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.4 FEATURE GROUP D (FGD)**

A. Description.

10.a. (Cont'd)

The Company will perform normal acceptance testing for sent-paid services for Smart PALs. In addition, the Company will perform testing for coin control and Operator Trunk-Full Feature (i.e., coin collect, coin return, 1+ person-to-person, operator recall, overtime, international direct distance dialing, and information calls). Test tapes must be received from the customer that will be processing the 1+ interLATA sent-paid traffic 45 days prior to the routing of said 1+ traffic to that customer. The Company will provide optional testing, at the request of the customer, as set forth in Section 13, following.

b. Basic PAL

For traffic originating from a Basic PAL, the Company shall provide 1+ interLATA sent-paid access from end offices to the customer's premises via FGD trunks. For traffic originating from a Basic PAL dialed as 1+ and/or 101XXXX 1+, the customer to whom such calls are routed shall order or have existing FGD trunks with ANI optional feature, as set forth in 6.3.1, following.

11. When a customer has had FGB access in an end office and subsequently replaces the FGB access with FGD access, at the mutual agreement of the customer and the Company, the Company will, for a period of 90 days after the installation of the FGD access service (unless the customer requests a shorter period), direct calls dialed by the customer's end users using the customer's previous FGB access code to the customer's FGD access service. The customer must be prepared to handle normally dialed FGD calls as well as calls dialed with the FGB access code which requires the customer to receive additional address signaling from the end user. The customer must be prepared to handle both the FGB and FGD signaling on the same trunks. Such calls will be rated as FGD.

Should the customer desire to maintain the routing of their FGB access code to their FGD access service past 90 days after the installation of FGD access service, the optional feature of 950 on FGD as set forth in 6.3.1, following, must be ordered.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.4 FEATURE GROUP D (FGD)

A. Description (Cont'd)

12. When FGD Service is provided for the origination of traffic from a Telecommunications Relay Service (TRS) provider to a 101XXXX carrier as set forth in 13.14, following, the service shall be provided in the following manner.

The TRS provider shall order an EF from their premises to their SWC and the associated functionally equivalent one-way originating FGD Service to the access tandem. The TRS provider must forward the 10-digit calling party's Automatic Number Identification (ANI), the TRS ANIii digits, the 10-digit called number and the specified interexchange carrier's Carrier Identification Code (CIC).

The Company shall switch the TRS originating traffic through the tandem to the FGD trunks of the interstate 101XXXX carrier.

The 101XXXX carrier shall order regular FGD originating Switched Access Service as set forth in this section to the access tandem that serves the TRS provider.

Rate regulations are set forth in 13.14, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.4 FEATURE GROUP D (FGD) (Cont'd)

B. Optional Features

1. Switched Transport Optional Features

- Supervisory Signaling
- Multiple POP Tandem Sectorization (MPTS)
- Self Healing Alternate Route Protection (SHARP)

2. Common Switching Optional Features

- Automatic Number Identification
 - Flexible ANI (BSE)
- Cut-Through
- Service Class Routing
- Alternate Traffic Routing
- Trunk Access Limitation
- International Carrier Option
- *SWITCHNET 56* Service
- WATS Access Service (WATS)
- 950 on FGD
- SS7 Out of Band Signaling
- Clear Channel Capability (BSE)

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.4 FEATURE GROUP D (FGD)

B. Optional Features (Cont'd)

3. Transport Termination Optional Features

- Operator Trunks - (i.e., Coin, Non-Coin or Combined Coin and Non-Coin)
- Operator Trunk-Full Feature

4. Line Termination Optional Features

- Answer Supervision for Use With WATS Access Service.

C. Transmission Performance

FGD is provided with either Transmission Type A1 or Type B1 performance as follows:

- When routed directly to the end office, Transmission Type B1 is provided.
- When routed to an access tandem, only Transmission Type A1 is provided for both the POT-to-access tandem and access tandem-to-end office trunks.
- Overall POT to end office requirements for FGD provide Transmission Type B1 performance whether routed directly with Transmission Type B1 or via an access tandem with Transmission Type A1.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.4 FEATURE GROUP D (FGD)

C. Transmission Performance (Cont'd)

Transmission Type B1 performance is provided with Interface Group 1, 2, 6, and 9, as available. Transmission Type A1 performance is provided with Interface Groups 2, 6 and 9, as available.

Voice band data Transmission Type DB1 parameter limits are provided with FGD for the transmission path between the customer's premises and the end office when directly routed to the end office. Voice band data Transmission Type DA1 parameter limits are provided for the transmission path between the customer's premises and the access tandem and between the access tandem and the end office. Voice band data transmission parameter limits are delineated in Technical Reference GR-334-CORE.

D. Testing Capabilities

FGD is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100-type) test line, milliwatt (102-type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105-type) test line, data transmission (107-type) test line, loop around test line, short circuit test line, open circuit test line and non-inverting digital loopback (108-type) test line.

In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, or Manual Scheduled Testing, and Non-Scheduled Testing, are available for FGD as set forth in Section 13, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)

6.2.5 CIRCUIT SWITCHED LINESIDE (CSL)

A. Description

1. Circuit Switched Lineside (CSL) Access, which is available to all customers, provides a line-side termination to Company end office switches for the customer's use in originating communications from and terminating communications to an Interexchange Carrier's interstate service or a customer-provided interstate communications capability. The customer must specify the Interexchange Carrier to which the CSL Service is connected or, in the alternative, specify the means by which the CSL Access communication is transported to another state.
2. CSL is provided in connection with Company electronic and electromechanical end offices. CSL may be transported via a DS3, DS1 or Voice Grade Entrance Facility and via a DS3, DS1 or Voice Grade DTT facility. When the customer orders CSL and Trunkside Access to be transported via the same DTT facility, DS1 to Voice Grade multiplexing equipment is always required at the end office at the rates and charge set forth in 6.8, following. When the customer does not combine CSL and Trunkside Access on the same facility, the Company will provide DS1 to Voice Grade multiplexing equipment at no charge. At the option of the customer, CSL is provided on a single or multiple line group basis and is arranged for originating calling only, terminating calling only, or two-way calling.
3. CSL provides a line-side termination at the first point of switching. The line-side termination will be provided with either ground-start supervisory signaling or loop-start supervisory signaling. The type of signaling is at the option of the customer.
4. The Company shall select the first point of switching, within the selected LATA, at which the line-side termination is to be provided unless the customer requests a different first point of switching and Company facilities and measurement capabilities are available to accommodate such a request.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.5 CIRCUIT SWITCHED LINESIDE (CSL)

A. Description (Cont'd)

5. A seven-digit local telephone number assigned by the Company is provided for access to CSL switching in the originating direction. The seven-digit local telephone number will be associated with the selected end office switch and is in the form NXX-XXXX.

If the customer requests a specific seven-digit telephone number that is not currently assigned, and the Company can, with reasonable effort, comply with that request, the requested number will be assigned to the customer.

6. CSL switching, when used in the terminating direction, is arranged with dial-tone start-dial signaling and dial-pulse address signaling. When used in the terminating direction, CSL switching may, at the option of the customer, be arranged for dual-tone multifrequency (DTMF) address signaling, subject to the availability of the equipment at the first point of switching. When CSL switching is provided in a hunt group or uniform call distribution arrangement, all CSL switching will be arranged for the same type of address signaling.
7. No address signaling is provided by the Company when CSL switching is used in the originating direction. Address signaling in such cases, if required by the customer, must be provided by the customer's end user using inband-tone signaling techniques. Such inband-tone address signals will not be regenerated by the Company and will be subject to the ordinary transmission capabilities of the Switched Transport provided.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.5 CIRCUIT SWITCHED LINESIDE (CSL)

A. Description (Cont'd)

8. CSL switching, when used in the terminating direction, may be used to access valid NXX codes in the LATA, local operator service (0- and 0+), Voice DA (411 or 555-1212, whichever is available), emergency reporting service (911, where available), exchange telephone repair (611, where available), community information services of an information service provider, and other customers' services (by dialing the appropriate digits). Charges for CSL terminating calls requiring operator assistance, or calls to 611 or 911, will only apply where sufficient call details are available. Additional non-access charges will also be billed on a separate account for:
 - a. an operator surcharge, as set forth in the general and/or local exchange tariffs, for local operator assistance (0- and 0+) calls,
 - b. calls to certain community information services in accordance with the Information Provider's applicable service rates when the Company performs the billing function for the Information Provider,
 - c. calls from an CSL line to another customer's service in accordance with that customer's applicable service rates when the Company performs the billing function for that customer.
9. CSL calls terminating outside of the dial tone office are assessed Tandem Transmission rates in addition to the applicable Switched Access rates when calls are terminated within the dial tone office. Tandem Transmission mileage measurement is described in 6.7.11, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.5 CIRCUIT SWITCHED LINESIDE (CSL)

A. Description (Cont'd)

10. CSL calls to Voice DA (411 or 555-1212, whichever is available), are subject to the Voice DA Service Call rate as set forth in 9.6.1.A., following, and are not subject to Switched Access rates as set forth in this section.
11. When an CSL switching arrangement for an individual customer (a single line or entire hunt group) is discontinued at an end office, an intercept announcement is provided. This arrangement provides, for a limited period of time, an announcement that the service associated with the number dialed has been disconnected.
12. Use of certain optional features and BSEs, available in B., following, may result in additional usage.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.5 CIRCUIT SWITCHED LINESIDE (CSL) (Cont'd)

B. Optional Features and BSEs

1. Switched Transport Optional Features and BSEs.

- Supervisory Signaling
- Customer Specified Entry Switch Receive Level

2. Common Switching Optional Features and BSEs.

- Call Denial
- Service Code Denial
- Hunt Group Arrangement (BSE)
- Uniform Call Distribution Arrangement (BSE)
- Nonhunting Number for Use with Hunt Group Arrangement or Uniform Call Distribution Arrangement
- WATS Access Service
- InterLATA Toll Denial
- Call Transfer (BSE)
- Three-Way Calling (BSE)
- Caller Identification - Number (BSE)
- Caller Identification - Bulk (BSE)

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.5 CIRCUIT SWITCHED LINESIDE (CSL)

B. Optional Features and BSEs

2. Common Switching Optional Features and BSEs. (Cont'd)

- Message Delivery Service (BSE)
- Message Delivery Service - Interoffice (BSE)
- Make Busy (BSE)
- Call Forwarding Variable (BSE)
- Queuing for Use With UCD (BSE)

3. Transport Termination Optional Features

- Two-way operation with dial-pulse address signaling and loop-start supervisory signaling
- Two-way operation with dial-pulse address signaling and ground-start supervisory signaling
- Two-way operation with dual-tone multifrequency address signaling and loop-start supervisory signaling
- Two-way operation with dual-tone multifrequency address signaling and ground-start supervisory signaling
- Terminating operation with dial-pulse address signaling and loop-start supervisory signaling
- Terminating operation with dial-pulse address signaling and ground-start supervisory signaling
- Terminating operation with dual-tone multifrequency address signaling and loop-start supervisory signaling
- Terminating operation with dual-tone multifrequency address signaling and ground-start supervisory signaling
- Originating operation with loop-start supervisory signaling
- Originating operation with ground-start supervisory signaling

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.5 CIRCUIT SWITCHED LINESIDE (CSL)

B. Optional Features and BSEs (Cont'd)

4. Line Termination Optional Features and BSEs
 - Answer Supervision - Lineside (BSE)
5. Certain other features which may be available in connection with CSL are provided under the Telephone Company's state access tariff and/or local exchange service tariff. These are:
 - Custom Calling Features (excluding Three-Way Calling, Call Transfer, Caller Identification - Number and Call Forwarding Variable)
 - *MARKET EXPANSION LINE*
 - Bill Number Screening
 - IntraLATA extensions
 - Open Switching Interval Protection (OSIP)
 - Message Waiting Indication - Audible

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.5 CIRCUIT SWITCHED LINESIDE (CSL) (Cont'd)

C. Transmission Performance

CSL is provided with either Transmission Type B or Type C performance. The standard parameter limits associated with these Transmission Types are guaranteed to the first point of switching. Transmission Type C performance is provided with Interface Group 1 and Transmission Type B is provided with Interface Groups 2, 6 and 9, as available. Voice band Data Transmission Type DB parameter limits are provided with CSL to the first point of switching as delineated in Technical Reference GR-334-CORE.

D. Testing Capabilities

CSL is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100-type) test line and milliwatt (102-Type) test line. In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing and Non-Scheduled Testing are available as set forth in Section 13, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)

6.2.6 CIRCUIT SWITCHED TRUNKSIDE

Circuit Switched Trunkside (CST) Access provides Trunkside Access to Company end office switches, either directly via DTT or through a Company designated Switched Access Service tandem switch via TST.

CST Access is provided by three different options. These are differentiated by their technical characteristics, e.g., the manner in which an end user accesses them in originating calls. The options are offered as:

- Circuit Switched Trunkside - Option 1 (CST1)
- Circuit Switched Trunkside - Option 2 (CST2)
- Circuit Switched Trunkside - Option 3 (CST3)

The options are provided as set forth in A., B. and C., following.

A. Circuit Switched Trunkside - Option 1

1. Description

- a. Circuit Switched Trunkside - Option 1 (CST1) Access, which is available to all customers, provides a trunk-side termination to Company end office switches for the customer's use in originating communications from and terminating communications to an Interexchange Carrier's interstate service or a customer-provided interstate communications capability. The customer must specify the Interexchange Carrier to which the CST1 Service is connected or, in the alternative, specify the means by which CST1 Access communication is transported to another state.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.6 CIRCUIT SWITCHED TRUNKSIDE

A. Circuit Switched Trunkside - Option 1

1. Description (Cont'd)

- b. CST1, when directly routed to an end office via DTT is provided at appropriately equipped Company electronic end office switches. When provided via Company-designated electronic access tandem switches via TST, CST1 switching is provided at Company electronic and electromechanical end office switches.
- c. When CST1 service is directly routed to an end office, the Switched Transport configuration is composed of an Entrance Facility and a DTT facility to an end office. When CST1 is switched through an access tandem, the Switched Transport configuration is composed of an Entrance Facility, a DTT facility between the SWC and the access tandem and TST from the access tandem to the end offices subtending the access tandem. Multiplexing options are described in 6.1.2, preceding.
- d. CST1 is provided as a trunk-side termination through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with wink-start start-pulsing signals and answer-disconnect supervisory signals.
- e. CST1 switching is provided with multifrequency (MF) address signaling in both the originating and terminating directions. Address signals and address information required by the customer in the originating direction must be provided by the customer's end user using inband-tone signaling techniques except for switching that has automatic number identification (ANI) or rotary dial station signaling. Such inband-tone address signals will not be regenerated by the Company and will be subject to the ordinary transmission capabilities of the Switched Transport provided.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.6 CIRCUIT SWITCHED TRUNKSIDE

A. Circuit Switched Trunkside - Option 1

1. Description (Cont'd)

- f. The access code for non-8XX CST1 Access Service switching is a uniform access code. The form of the uniform access code is 950-XXXX or 1 + 950-XXXX for carriers. These uniform access codes will be the assigned access numbers of all non-8XX CST1 Access Service provided to the customer by the Company. No access code is required for CST1 switching used to provide 800 DB Access Service. The telephone number dialed by the customer's end users is of the form 1+8XX+NXX-XXXX.

- g. CST1 switching, when used in the terminating direction, may be used to access valid NXX codes in the LATA, community information services of an information service provider, and other customers' services (by dialing the appropriate digits). When CST1 is directly routed to an end office via DTT, only those valid NXX codes served by that end office may be accessed. When CST1 is routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. Additional non-access charges will also be billed for calls from an CST1 trunk to another customer's service in accordance with that customer's applicable service rates when the Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 101XXXX, 950-XXXX (or 1 + 950-XXXX) access codes, local operator assistance (0- and 0+), Voice DA (411 or 555-1212, where available) and service codes 611 and 911. Calls will be completed to Voice DA (NPA+555-1212 or 555-1212) when CST1 Switching is combined with Voice DA Switching. The combination of CST1 Switched Access Service with Voice DA Service is provided as set forth in Section 9, following. CST1 may not be switched, in the terminating direction, to another Trunkside Switched Access Service.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.6 CIRCUIT SWITCHED TRUNKSIDE

A. Circuit Switched Trunkside - Option 1

1. Description (Cont'd)

- h. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where CST1 switching is provided. When required by technical limitations, a separate trunk group will be established for each type of CST1 switching arrangement provided. Different types of CST1 or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.
- i. When all CST1 switching arrangements are discontinued at an end office and/or in a LATA, an intercept announcement is provided. This arrangement provides, for a limited period of time, an announcement that the service associated with the number dialed has been disconnected.

2. Optional Features and BSEs

a. Switched Transport Optional Features

- Customer Specification of Local Transport Termination
- Supervisory Signaling
- Customer Specified Entry Switch Receive Level
- Self Healing Alternate Route Protection (SHARP)

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE**

- A. Circuit Switched Trunkside - Option 1
 2. Optional Features and BSEs (Cont'd)
 - b. Common Switching Optional Features and BSEs
 - Automatic Number Identification (BSE)
 - Up to 7-digit Outpulsing of Access Digits to customer
 - Alternate Traffic Routing (BSE)
 - WATS Access Service (WATS)
 - c. Line Termination Optional Features
 - Answer supervision for use with WATS Access Service
 - d. Another feature, Bill Number Screening, which may be available in connection with CST1, is provided under the Company's state access tariff and/or local exchange service tariffs.
 3. Transmission Performance

CST1 is provided with Transmission Type B1 performance. Transmission Type B1 standard parameter limits apply to the transmission path routed directly (i.e., between the customer's premises and the end office) and to each segment of an access tandem connection. Transmission Type B1 performance is provided with Interface Group 1, 2, 6 and 9, as available. Voice band data Transmission Type DB1 parameter limits are provided with CST1 when routed directly and to each segment of an access tandem connection as delineated in Technical Reference GR-334-CORE.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE****A. Circuit Switched Trunkside - Option 1 (Cont'd)****4. Testing Capabilities**

CST1 is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100-type) test line, milliwatt (102-type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105-type) test line, data transmission (107-type) test line, loop around test line, short circuit test line and open circuit test line. In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, Manual Scheduled Testing and Non-Scheduled Testing are available as set forth in Section 13, following.

B. Circuit Switched Trunkside - Option 2**1. Description**

- a. Circuit Switched Trunkside - Option 2 (CST2) Access, which is available only to providers of MTS and WATS, provides a trunk-side termination to Company end office switches for the customer's use in originating and terminating communications.
- b. CST2 is provided at all Company end office switches whether routed directly to an end office or via Company-designated access tandem switches. CST2 switching is provided to the customer (i.e., providers of MTS and WATS) at an end office switch unless CST3 end office switching is provided in the same office. When CST3 switching is available, CST2 switching will not be provided.
- c. When CST2 service is directly routed to an end office, the Switched Transport configuration is composed of an Entrance Facility and a DTT facility to an end office. When CST2 is switched through an access tandem, the Switched Transport configuration is composed of an Entrance Facility, a DTT facility between the SWC and the access tandem and TST from the access tandem to the end offices subtending the access tandem. Multiplexing options are described in 6.1.2, preceding.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE****B. Circuit Switched Trunkside - Option 2****1. Description (Cont'd)**

- d. CST2 is provided as a trunk-side termination through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with answer and disconnect supervisory signaling. Wink-start, start-pulsing signals are provided in all offices where available. In those offices where wink-start start-pulsing signals are not available, delay-dial start-pulse signaling is provided or immediate dial-pulse address signaling may be provided which allows dial pulses to be forwarded without a start-pulsing signal from the terminating office.
- e. CST2 is provided with multifrequency (MF) address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial-pulse, or immediate dial pulse, whichever is available. Up to 12-digits of the called party number will be forwarded by Company equipment to the customer's premises. Such called party number signals will be subject to the ordinary transmission capabilities of the Switched Transport provided.
- f. No access code is required for CST2 switching. For calls in the North American Numbering Plan (NANP), a 7- or 10- digit number may be dialed by the customer's end user after dialing the prefix 0 or 1. For calls outside the NANP, and, if the end office is technically equipped for International Direct Distance Dialing (IDDD), a 7- to 15- digit number may be dialed after dialing the prefix 011 or 01.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE****B. Circuit Switched Trunkside - Option 2****1. Description (Cont'd)**

- g. CST2 switching, when used in the terminating direction, may be used to access valid NXX codes in the LATA, community information services of an information provider, and other customers' services (by dialing the appropriate codes) when the services can be reached using valid NXX codes. When CST2 is directly routed to an end office via DTT, only those valid NXX codes served by that office may be accessed. When CST2 is routed through an access tandem, only those valid NXX codes served by offices subtending the access tandem may be accessed.

Additional non-access charges will also be billed for calls from a CST2 trunk to another customer's service in accordance with that customer's applicable service rates when the Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 101XXXX, 950-XXXX (or 1 + 950-XXXX) access codes, local operator assistance (0-and 0+), Voice DA (411 or 555-1212) and service codes 611 and 911. Calls will be completed to Voice DA (NPA+555-1212 or 555-1212) when CST2 switching is combined with Voice DA switching. The combination of CST2 Switched Access Service with Voice DA Service is provided as set forth in Section 9, following. CST2 may not be switched, in the terminating direction, to another Trunkside Switched Access Service.

- h. The Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where CST2 switching is provided. When required by technical limitations, a separate trunk group will be established for each type of CST2 switching arrangement provided. Different types of CST2 or other switching arrangements may be combined in a single trunk group at the option of the Company.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICES

6.2.6 CIRCUIT SWITCHED TRUNKSIDE

B. Circuit Switched Trunkside - Option 2

1. Description (Cont'd)

- i. The Company will provide 1+ interLATA sent-paid access from pay telephones utilizing Smart Public Access Lines via CST2 for calls dialed as 1+ and/or 101XXXX 1+ in the following manner. 1+ interLATA sent-paid access from pay telephones utilizing Basic Public Access Line Service shall be provided by FGD or CST3.

(1) Smart PAL

For traffic originating from a Smart PAL, the customer to whom such calls are routed shall order CST2 trunks from end offices to the customer's premises via direct trunks or via Operator Access Tandems, with the Operator Trunk-Full Feature type of transport termination, as set forth in 6.3.2, following. The trunks must be dedicated, and the customer shall specify the number of trunks required at each end office from which the customer will receive 1+ sent-paid traffic.

The customer is responsible for providing all other operator services signaling capabilities, as described in the Operator Services Systems Generic Requirements (OSSGR) Technical Reference FR-271 and the LATA Switching Systems Generic Requirements (LSSGR) Technical Reference FR-64.

When the Company provides Operator Services Signaling (OSS) between an Operator Access Tandem and the customer's premises, the customer will be required to order a separate and final trunk group from the Operator Access Tandem to the customer's premises for each Numbering Plan Area (NPA) within a LATA to identify the originating NPA. Also, the customer must order a separate trunk group for each type of coin control signaling that is utilized among the end offices subtending an Operator Access Tandem.

The Company will not block 101XXXX 1+ calls and will route 101XXXX 1+ interLATA sent-paid traffic in accordance to the end user request. It will be the responsibility of the 101XXXX 1+ dialed carrier to complete the casual 101XXXX 1+ interLATA sent-paid call or to provide a recorded message to the end user.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICES

6.2.6 CIRCUIT SWITCHED TRUNKSIDE

B. Circuit Switched Trunkside - Option 2

1. Description

i.(1) (Cont'd)

The Company will perform normal acceptance testing for sent-paid services for Smart PALs. In addition, the Company will perform testing for coin control and Operator Trunk-Full Feature (i.e., coin collect, coin return, 1+ person-to-person, operator recall, overtime, international direct distance dialing, and information calls). Test tapes must be received from the customer that will be processing the 1+ interLATA sent-paid traffic 45 days prior to the routing of said 1 + traffic to that customer. The Company will provide optional testing, at the request of the customer, as set forth in Section 13, following.

d. Line Termination Optional Features and BSEs

- Answer Supervision for Use With WATS Access Service.

3. Transmission Performance

CST2 is provided with Transmission Type B1 performance. Transmission Type B1 standard parameter limits apply to the transmission path routed directly (i.e., between the customer's premises and the end office) and to each segment of an access tandem connection. Transmission Type B1 performance is provided with Interface Group 1, 2, 6 and 9, as available. Voice band data Transmission Type DB1 parameter limits are provided with CST2 when directly routed and to each segment of an access tandem connection as delineated in Technical Reference GR-334-CORE.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE****B. Circuit Switched Trunkside - Option 2 (Cont'd)****4. Testing Capabilities**

CST2 is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100-type) test line, milliwatt (102-type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105-type) test line, data transmission (107-type) test line, loop around test line, short circuit test line and open circuit test line. In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing or Manual Scheduled Testing, and Non-Scheduled Testing are available as set forth in Section 13, following, for CST2.

C. Circuit Switched Trunkside - Option 3**1. Description**

- a. Circuit Switched Trunkside - Option 3 (CST3) is provided at Company-designated end office switches whether routed directly to an end office or via Company-designated electronic access tandem switches. CST3 is also provided at Company end office switches that subtend a TSP's premises when the DTT facility is equipped with TSI.
- b. CST3, which is available to all customers, provides a trunk-side termination through the use of end office or access tandem switch trunk equipment. Wink-start, start-pulsing and answer-supervisory signaling are sent by the terminating office. Disconnect-supervisory signaling is sent from the originating or terminating office. When CST3 uses SS7 out of band signaling, no signaling will be done via the message channel.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE****C. Circuit Switched Trunkside - Option 3****1. Description (Cont'd)**

- c. When CST3 service is directly routed to an end office, the Switched Transport configuration is composed of an Entrance Facility and a DTT facility to an end office. When CST3 is switched through an access tandem, the Switched Transport configuration is composed of an Entrance Facility, a DTT facility between the SWC and the access tandem and TST from the access tandem to the end offices subtending the access tandem. Multiplexing options are described in 6.1.2, preceding.
- d. CST3 switching is provided with multifrequency address signaling or SS7 out of band signaling. With multifrequency address signaling, up to 12 digits of the called party number dialed by the customer's end user using dual tone multifrequency or dial pulse address signals will be provided by Telephone Company equipment to the customer's premises where the Switched Access Service terminates. Such address signals will be subject to the ordinary transmission capabilities of the Switched Transport provided. With SS7 out of band signaling, up to 12 digits of the called party number dialed by the customer's end user using dual tone multifrequency or dial pulse address signals is provided by the Company equipment to the customer's designated premises via CCSAC links. SS7 out of band signaling requires the customer to order the SS7 out of band signaling optional feature, as set forth in 6.3, following, and CCSAC Service as set forth Section 20, following.
- e. CST3 switching, when used in the terminating direction, may be used to access valid NXXs in the LATA, community information services of an information service provider, and other customer services (by dialing the appropriate codes) when such services can be reached using valid NXX codes. When directly routed to an end office via DTT, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed.

Terminating CST3, when tandem routed, may also, at the option of the customer, access valid NXX codes served by offices in which originating CST3 is not available. Rating of this optional service is as set forth in 6.7.1.D.1., following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE**

C. Circuit Switched Trunkside - Option 3

1. Description

e. (Cont'd)

Additional non-access charges will also be billed for calls from an CST3 trunk to another customer's service in accordance with that customer's applicable service rates when the Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 101XXXX, 950-XXXX (or 1 + 950-XXXX) access codes, local operator assistance (0- and 0+), Voice DA (411 or 555-1212) and service codes 611 and 911. Calls will be completed to Voice DA (NPA+555-1212 or 555-1212) when CST3 switching is combined with Voice DA Switching. The combination of CST3 Switched Access Service with Voice DA Service is provided as set forth in Section 9, following. CST3 may not be switched, in the terminating direction, to another Trunkside Switched Access Service except as set forth in C.1.1., following.

- f. The Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where CST3 switching is provided. When required by technical limitations, or in the case of *SWITCHNET 56*, a separate trunk group will be established for each type of CST3 switching arrangement provided. Different types of CST3 or other switching arrangements may be combined in a single trunk group at the option of the Company.
- g. The uniform access code for CST3 switching is 101XXXX. The Company assigns uniform access codes for all CST3 access provided to the customer. No access code is required for calls to a customer over CST3 Switched Access Service when the end user's telephone exchange service is arranged for IC Subscription as set forth in Section 13, following.

When no access code is required, the number dialed by the customer's end user shall be a 7- or 10- digit number after dialing the prefix 0 or 1 for calls in the North American Numbering Plan (NANP). For calls outside the NANP, and, if the end office is technically equipped for International Direct Distance Dialing (IDDD), a 7- to 15- digit number may be dialed after dialing the prefix 011 or 01.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.6 CIRCUIT SWITCHED TRUNKSIDE

C. Circuit Switched Trunkside - Option 3

1. Description
- g. (Cont'd)

When the 101XXXX uniform access code is used, CST3 switching also provides for dialing the digit 0 or 00 for access to the customer's operator, 911 for access to the Company's emergency reporting service, or at the customer's option, the end-of-dialing digit (#) for cut-through access to the customer's premises.

- h. When *SWITCHNET 56* is provided with CST3, the standard CST3 dialing pattern is used. This dialing pattern may vary according to the technology implemented in each specific Company end office and/or access tandem (i.e., in the originating direction, dialing #56 may be required dependent upon the switching technology.)
- i. CST3 switching will be arranged to accept calls from telephone exchange service locations without the need for dialing a 101XXXX uniform access code. Each telephone exchange service line may be marked with an IC Subscription code to identify the 101XXXX uniform access code its calls will be directed to for interLATA service. IC Subscription codes are applied as set forth in Section 13, following.
- j. The Company will provide 1+ interLATA sent-paid access from end offices to the customer's premises for calls dialed as 1+ and/or 101XXXX 1+ from pay telephones utilizing PAL Service, Smart and Basic, in the following manner.

- (1) Smart PAL

For traffic originating from a Smart PAL, the customer to whom such calls are routed shall order CST3 trunks from end offices to the customer's premises via direct trunks or via Operator Access Tandems, with the Operator Trunk-Full Feature type of transport termination, as set forth in 6.3.2, following. The trunks must be dedicated, and the customer shall specify the number of trunks required at each end office from which the customer will receive 1 + sent-paid traffic.

The customer is responsible for providing all other operator services signaling capabilities, as described in the Operator Services Systems Generic Requirements (OSSGR) Technical Reference FR-271 and the LATA Switching Systems Generic Requirements (LSSGR) Technical Reference FR-64.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE**

C. Circuit Switched Trunkside - Option 3

1. Description

j.(1) (Cont'd)

When the Company provides Operator Services Signaling (OSS) between an Operator Access Tandem and the customer's premises, the customer will be required to order a separate and final trunk group from the Operator Access Tandem to the customer's premises for each Numbering Plan Area (NPA) within a LATA to identify the originating NPA. Also, the customer must order a separate trunk group for each type of coin control signaling that is utilized among the end offices subtending an Operator Access Tandem.

The Company will not block 101XXXX 1+ calls and will route 101XXXX 1+ interLATA sent-paid traffic in accordance to the end user request. It will be the responsibility of the 101XXXX 1+ dialed carrier to complete the casual 101XXXX 1+ interLATA sent-paid call or to provide a recorded message to the end user.

The Company will perform normal acceptance testing for sent-paid services for Smart PALs. In addition, the Company will perform testing for coin control and Operator Trunk-Full Feature (i.e., coin collect, coin return, 1+ person-to-person, operator recall, overtime, international direct distance dialing, and information calls). Test tapes must be received from the customer that will be processing the 1+ interLATA sent-paid traffic 45 days prior to the routing of said 1 + traffic to that customer. The Company will provide optional testing, at the request of the customer, as set forth in Section 13, following.

(2) Basic PAL

For traffic originating from a Basic PAL, the Company shall provide 1+ interLATA sent-paid access from end offices to the customer's premises via CST3 trunks. For traffic originating from a Basic PAL dialed as 1+ and/or 101XXXX 1+, the customer to whom such calls are routed shall order or have existing CST3 trunks with ANI optional feature, as set forth in 6.3.1, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.6 CIRCUIT SWITCHED TRUNKSIDE****C. Circuit Switched Trunkside - Option 3****1. Description (Cont'd)**

- k. When a customer has had CST1 access in an end office and subsequently replaces the CST1 access with CST3 access, at the mutual agreement of the customer and the Company, the Company will, for a period of 90 days after the installation of the CST3 access service (unless the customer requests a shorter period), direct calls dialed by the customer's end users using the customer's previous CST1 access code to the customer's CST3 access service. The customer must be prepared to handle normally dialed CST3 calls as well as calls dialed with the CST1 access code which requires the customer to receive additional address signaling from the end user. The customer must be prepared to handle both the CST1 and CST3 signaling on the same trunks. Such calls will be rated as CST3.

Should the customer desire to maintain the routing of their CST1 access code to their CST3 access service past 90 days after the installation of CST3 access service, the optional feature of 950 on CST3 as set forth in 6.3.1, following, must be ordered.

1. When CST3 Service is provided for the origination of traffic from a Telecommunications Relay Service (TRS) provider to a 101XXXX carrier as set forth in 13.14, following, the service shall be provided in the following manner.

The TRS provider shall order an EF from their premises to their SWC and the associated functionally equivalent one-way originating CST3 Service to the access tandem. The TRS provider must forward the 10-digit calling party's Automatic Number Identification (ANI), the TRS ANIii digits, the 10-digit called number and the specified interexchange carrier's Carrier Identification Code (CIC).

The Company shall switch the TRS originating traffic through the tandem to the CST3 trunks of the interstate 101XXXX carrier.

The 101XXXX carrier shall order regular CST3 originating Switched Access Service as set forth in this section to the access tandem that serves the TRS provider.

Rate regulations are set forth in 13.14, following.

- Operator Trunks - (i.e., Coin, Non-Coin and Combined Coin or Non-Coin)
- Operator Trunk - Full Feature

d. Line Termination Optional Features

- Answer Supervision for Use With WATS Access Service

3. Transmission Performance

CST3 is provided with either Transmission Type A1 or Type B1 performance as follows:

- When routed directly to the end office, Transmission Type B1 is provided.
- When routed to an access tandem, only Transmission Type A1 is provided for both the POT-to-access tandem and access tandem-to-end office trunks.
- Overall POT to end office requirements for CST3 provide Transmission Type B1 performance whether routed directly with Transmission Type B1 or via an access tandem with Transmission Type A1.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.6 CIRCUIT SWITCHED TRUNKSIDE

- C. Circuit Switched Trunkside - Option 3
- 3. Transmission Performance (Cont'd)

Transmission Type B1 performance is provided with Interface Group 1, 2, 6, and 9, as available. Transmission Type A1 performance is provided with Interface Groups 2, 6 and 9, as available.

Voice band data Transmission Type DB1 parameter limits are provided with CST3 for the transmission path between the customer's premises and the end office when directly routed to the end office. Voice band data Transmission Type DA1 parameter limits are provided for the transmission path between the customer's premises and the access tandem and between the access tandem and the end office. Voice band data transmission parameter limits are delineated in Technical Reference GR-334-CORE.

4. Testing Capabilities

CST3 is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100-type) test line, milliwatt (102-type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105-type) test line, data transmission (107-type) test line, loop around test line, short circuit test line, open circuit test line and non-inverting digital loopback (108-type) test line.

In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, or Manual Scheduled Testing, and Non-Scheduled Testing, are available for CST3 as set forth in Sections 13, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)

6.2.7 DIRECT-INWARD-DIAL (*DID*) SWITCHED ACCESS SERVICE

AVAILABLE IN ID (SPOKANE LATA), OR, WA ONLY

A. Description

1. *DID* switching is provided as trunkside switching with line treatment via DTT. The switch trunk equipment is provided with wink start start-pulsing signals and answer and disconnect supervisory signaling.
2. *DID* Switched Access Service is provided with Multifrequency (MF), Dual-Tone Multifrequency (DTMF) or Dial-Pulse (DP) address signaling when provided at suitably equipped electronic end offices. No other address signaling is provided by the Company. Additional address signaling, if required by the customer, must be provided by the customer's end user using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Company and will be subject to the ordinary transmission capabilities of the Switched Transport provided.
3. *DID* switching is only available in the originating direction. *DID* Switched Access Service is not available with a DTT facility equipped with Tandem Signaling Information.
4. The Company will establish a trunk group or groups for the customer at end office switches where *DID* Switched Access Service is provided.
5. *DID* is available as a bundled Switched Access Service or an unbundled basic serving arrangement (BSA). *DID* provided on an unbundled basis is available with the BSE, Called Directory Number Delivery (CDND) as described in 6.3.1, following, at the rates set forth in 6.8.1. The BSA Switched Access *DID* is subject to the LS3 rates and the bundled *DID* Switched Access Service is subject to the LS1 rates as set forth in 6.1.2.B., preceding.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.7 DIRECT-INWARD-DIAL (*DID*) SWITCHED ACCESS SERVICE (Cont'd)

B. Optional Features

1. Common Switching Optional Features and BSEs

- a. Up to seven-digit outpulsing of called party telephone number to customer (This option is available with bundled *DID* Service only.)
- b. Called Directory Number Delivery-BSE (This option is available with unbundled *DID* Service only.)
- c. MF, DTMF or DP address signaling (These options are available with bundled or unbundled *DID* Service.)
- d. *DID* Trunk Queuing - BSE (This option is available with bundled or unbundled *DID* Service).

2. Other features which may be available in connection with *DID* are provided under the Telephone Company's state and/or local exchange service tariffs. These are:

- a. Billed Number Screening (This option is available with bundled or unbundled *DID* Service.)
- b. Blocks of telephone numbers, originating only (This option is available with bundled or unbundled *DID* Service.)

C. Transmission Specifications

DID is provided with either Type B or Type C Transmission Specifications. The specifications for the associated parameters are guaranteed to the end office. Type C Transmission Specifications are provided with Interface Group 1 and Type B is provided with Interface Groups 2 and 6. Data Transmission Performance Type DB is provided with *DID* to the first point of switching.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.7 DIRECT-INWARD-DIAL (DID) SWITCHED ACCESS SERVICE (Cont'd)****D. Testing Capabilities**

In addition to the tests described in 6.1.5, preceding, which are included with the installation of service, additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, Manual Scheduled Testing and Non-Scheduled Testing are available as set forth in Section 13, following.

6.2.8 800 DATA BASE ACCESS SERVICE**A. General Description**

800 Data Base (800 DB) Access Service is an originating service utilizing Trunkside Access which provides for the forwarding of end user dialed 8XX-NXX-XXXX calls to a customer based on the dialed 8XX number. The basic query includes the 8XX number identification and the appropriate area of service routing for an 800 number based on the geographic origination of the call. The 800 customer may choose to have a call delivered to a single carrier termination or multiple carrier terminations based on a specific LATA, NPA, NPA/NXX, or up to any combination of the same.

800 DB Access Service must be ordered to all end offices in a LATA and provisioned, at a minimum, to all access tandems[1] and operator switches equipped as SSPs within a LATA. If the customer is utilizing another carrier's facilities to meet the LATA-wide minimum requirement, the customer must provide a letter signed by the access customer ordering the 800 DB Service and the partnering carrier indicating LATA-wide coverage. In addition, the provision of 800 DB Access Service requires the customer's direct access to the Service Management System/800 (SMS/800), or as an alternative, the provision of such service by a Responsible Organization in accordance with the Guidelines for 800 Data Base.

When an 8XX call is originated by an end user, the Company will perform the customer identification function based on the dialed digits and the geographic origination of the call to determine the customer location to which the call is to be routed in accordance with SMS/800 information residing in the Company's Service Control Point (SCP).

[1] 800 DB Access Service is not provided via a DTT facility equipped with Tandem Signaling Information.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.8 800 DATA BASE ACCESS SERVICE****A. General Description (Cont'd)**

The customer has the option of having the dialed 8XX number (i.e., 8XX-NXX-XXXX) or the translated Plain Old Telephone Service (POTS) number (i.e., NPA-NXX-XXXX) delivered. If the translated POTS number is delivered, the customer must request the POTS Translation vertical feature through the Responsible Organization as described in B., following. The service provider will be unable to determine that such calls originated as 1+8XX-NXX-XXXX dialed calls unless the customer also orders the Automatic Number Identification (ANI) feature through the Company as described in 6.3.1, following.

800 DB Access Service will be provisioned from the SSP switch as CST3 or Feature Group D.

When the customer orders 800 DB Access Service for the transmission of both voice and data traffic, the customer must order Clear Channel Capability (CCC) for provisioning of its data traffic.

The customer's 8XX voice or data traffic may be combined in the same trunk group arrangement with the customer's non-8XX Access Service voice or data traffic or provisioned on a separate trunk group, unless prohibited by technical limitations.

Measurement of 800 DB Access Service usage shall be in accordance with the regulations set forth in 6.7.7, following for Trunkside Access. Specifically, 800 DB Access Service originating usage, whether combined with non-8XX Access Service usage on trunk groups or provided using dedicated trunk groups, shall be measured in the same manner as specified for non-8XX Access Service usage over Trunkside Access.

The Company must be notified twenty-four (24) hours prior to any media stimulation. The Company maintains the right to apply protective controls, i.e., those actions such as call gapping, to ensure the provisioning of acceptable service to all telecommunications users of the Company's network services.

Application of rates for 800 DB Access Service shall be as set forth in 6.7.1, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.8 800 DATA BASE ACCESS SERVICE (Cont'd)

B. Vertical Features

In addition to the basic carrier identification function, 800 DB Access Service subscribers may request vertical features through a Responsible Organization in accordance with the SMS/800 User Guide. Vertical features will be maintained within the Company's SCP when technically feasible. The POTS Translation feature is described in 1., following, and the Call Handling and Destination Features are described in 2., following.

1. POTS Translation

The POTS Translation vertical feature provides the option of having the ten-digit POTS number (i.e., NPA-NXX-XXXX) delivered instead of the 8XX dialed number (i.e., 8XX-NXX-XXXX) delivered to the service provider. If the POTS Translation feature is requested through the Responsible Organization, the service provider will be unable to determine that such calls originated as 1+8XX-NXX-XXXX dialed calls unless the service provider also orders, through the Company, the Automatic Number Identification (ANI) optional feature as described in 6.3.1, following. ANI information digit twenty-four (24) indicates that the call originated as an 8XX dialed call and is delivered when the ANI optional feature is ordered.

A POTS Translation Charge as described in 6.7.1, following, is assessed to the service provider for each 8XX call delivered.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.8 800 DATA BASE ACCESS SERVICE****B. Vertical Features (Cont'd)****2. Call Handling and Destination Features**

Call Handling and Destination Features allow service subscribers variable routing options by specifying a single carrier, multiple carriers (Exchange and/or Interexchange Carriers), single termination or multiple terminations. Multiple terminations for the variable routing options require the POTS Translation feature described in 1., preceding. The following variable routing options are available.

- Routing by Originating Telephone Number (NPA-NXX-XXXX)
- Time of Day
- Day of Week
- Specific Date
- Allocation by Percentage

Routing by originating telephone number (NPA-NXX-XXXX), where technically feasible, allows a service subscriber to specify one or more multiple terminations with a single carrier and/or multiple carriers (Exchange and/or Interexchange Carriers) based on where a call originates.

Time of Day/Day of Week allows a service subscriber to specify one or more multiple terminations with a single carrier and/or multiple carriers (Exchange and/or Interexchange Carriers) based on time of day or day of week the call originates.

Specific Date allows the service subscriber to specify alternate service routes with the date the call originates. These calls can be routed to one of multiple terminations, with a single carrier and/or multiple carriers (Exchange and/or Interexchange Carriers).

Allocation by Percentage allows the service subscriber to specify by percentage the calls to be allocated to multiple terminations and/or multiple carriers (Exchange and/or Interexchange Carriers).

A Call Handling and Destination Feature Query Charge as described in 6.7.1, following, is assessed to the service provider for each 8XX query to the SCP which utilizes one or more of the Call Handling and Destination Features.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.8 800 DATA BASE ACCESS SERVICE (Cont'd)

- C. The Federal Communications Commission (FCC) has directed that the following language be included in this tariff:
1. The Federal Communications Commission (“FCC”) has concluded that warehousing, which the FCC defines as Responsible Organizations, either directly or indirectly through an affiliate, reserving toll free numbers from the SMS database without having an identified toll free subscriber for whom those numbers are being reserved, is an unreasonable practice under Section 201(b) of the Communications Act and is inconsistent with the Commission’s obligation under Section 251(e) of the Communications Act to ensure that numbers are made available on an equitable basis; and if a Responsible Organization does not have an identified toll free subscriber agreeing to be billed for service associated with each toll free number reserved from the database, or if a Responsible Organization does not have an identified, billed toll free subscriber before switching a number from reserved or assigned to working status, then there is a rebuttable presumption that the Responsible Organization is warehousing numbers. Responsible Organizations that warehouse numbers will be subject to penalties.
 2. The FCC has concluded that hoarding, defined as the acquisition of more toll free numbers than one intends to use for the provision of toll free service, as well as the sale of a toll free number by a private entity for a fee, is contrary to the public interest in the conservation of the scarce toll free number resource and contrary to the FCC’s responsibility to promote the orderly use and allocation of toll free numbers.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)

6.2.9 900 ACCESS SERVICE

900 Access Service is an originating service utilizing Trunkside Switched Access Service. The service provides a customer identification function based on the dialed NXX. When a 1+900+NXX-XXXX or 0+900+NXX-XXXX call is originated by the end user, the Company will determine, based on the NXX dialed, the customer to which the 900 call is to be routed. This six-digit routing function will be performed at suitably equipped end office and access tandem switches as determined by the Company.

900 Access Service will be provisioned as CST3, Feature Group D or 900 Access Service (FGB-Like).

900 Access Service is available only as a LATA wide service and must be provisioned to all offices within the LATA. 900 Access Service may be provisioned with 1+900+NXX-XXXX dialing capability or expanded to include 0+900+NXX-XXXX dialing capability. The Expanded 900 Option is not offered without 1+900 Access Service within a LATA and is available only with CST3 or Feature Group D Service in suitably equipped Company end offices.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.9 900 ACCESS SERVICE (Cont'd)**

Calls originating in a LATA in which the customer has not ordered 900 Access Service will be blocked. Only customers who order the Expanded 900 (i.e., 0+900+NXX-XXXX) Option will be able to receive 0+900 calls to NXX codes assigned to them. In addition, calls originating in a LATA for which 900 Access Service has been established will be blocked utilizing the blocking specifications as follows:

- 1+900+NXX-XXXX will be blocked from coin telephones (except customer owned coin operated telephones), 0+ 101XXXX, Inmate Service, Hotel/Motel Service (except those with customer-owned rating services).
- 0+900+NXX-XXXX will be blocked from 101XXXX and Inmate Service.

At the option of the customer, 900 Access Service traffic may be collected at suitably equipped end offices and/or access tandems. However, the customer must collect 900 traffic at all access tandems within the LATA. Network constraints do not permit multiple tandem arrangements for routing of 900 traffic.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.9 900 ACCESS SERVICE (Cont'd)

For 900 Access Service provisioned as CST2, CST3, Feature Group C or D, the customer may establish a separate trunk group or combine 900 traffic with other traffic types for access from suitably equipped end offices and access tandems. For 900 Access Service provisioned with traditional signaling and answer supervision, network limitations requires routing of 900 traffic from suitably equipped end offices and access tandems via a dedicated trunk group. However, this dedicated trunk group may have a combination of 5YY traffic and 900 traffic when both Access Services (i.e., 5YY and 900) are provisioned from an access tandem with traditional signaling and answer supervision.

Measurement of 900 Access Service usage shall be in accordance with the regulations set forth in 6.7.7, following, for CST2, CST3, Feature Group C and D. Specifically, 900 Access Service originating usage shall be measured in the same manner as that specified for CST2, CST3, Feature Group C and D, whether provisioned separately (i.e., dedicated trunk group) or combined with other traffic types.

The Company must be notified 24 hours prior to any media stimulation. The Company maintains the right to apply protective controls, i.e., those actions such as call gapping, to ensure the provisioning of acceptable service to all telecommunications users of the Company's network services.

The nonrecurring charges for 900 Access Service are described in 6.7.1., following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)****6.2.10 DEDICATED NETWORK ACCESS LINK (DNAL)****A. Service Description**

The Switched Transport Dedicated Network Access Link provides a connection between the customer-designated premises and a Company switch or central office for the control of features and functions, or for the transfer of data from the switch or central office to the customer. The DNAL is used in conjunction with Switched Access Services or central office based services requiring a separate link for transmitting signaling or control information. Central office based services require connection to equipment in a central office that is not part of the central office switch. For example, service that requires a separate specialized switch or a modem. The Switched Access Service determines the requirement for speed, type, and number of DNALs.

The Company will provide the Transport Facility and the Transport Termination for the DNAL from available inventory. DNAL may not utilize existing Entrance Facilities or DTT facilities specified by the customer.

The DNAL is only subject to the DNAL rates and charges as set forth in 6.8.1., following, and is not subject to usage rates or other Switched Transport monthly rate elements.

B. Transport Facility**1. DNAL Requirements for the Make Busy Arrangement**

The DNAL provided for the Make Busy Arrangement, a Low Speed Data facility, is used to busy out a customer's facilities and is used in conjunction with and must be related to a circuit with the Make Busy Arrangement described in 6.3.1.Z., following. The Make Busy arrangement requires a two-wire analog DNAL between the customer's CSL or FGA dial tone office and the customer's premises with a DNAL termination described in C., following. The Low Speed Data facility is capable of providing a two point circuit for control of a transfer arrangement, control of a relay or a similar contact closure function at data speeds no greater than 30 baud. The facility will be furnished on metallic or equivalent facilities at the Company's option.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE****6.2.10 DEDICATED NETWORK ACCESS LINK (DNAL)****B. Transport Facility (Cont'd)**

2. DNAL Requirements for Customer Identification - BULK (BCLID), Message Delivery Service (MDS) or Message Delivery Service - Interoffice (MDSI)

The DNAL provided for BCLID, MDS or MDSI is used for the transmission of call-related information to the customer. The DNAL is used in conjunction with a Call Data input/output Central Office Facility for BCLID, MDS, or MDSI as described in 6.3.1., following. The DNAL is required between the customer's CSL or FGA dial tone office and the customer's premises. A modem is provided in the central office and a compatible modem is required at the customer's premises.

This service is available only in Company-designated offices and requires a 1200 bps or 9600 bps DNAL Transport Termination, described in C., following, and a four-wire DNAL Transport Facility in every office a customer wants to access. The four-wire DNAL is a Voice Grade facility which provides voice frequency transmission capability in the nominal frequency range of 300 to 3000 Hz. When a DNAL is ordered to be terminated at a customer's designated Interexchange Carrier's digital POP which requires a minimum digital interface level of 1.544 Mbps, the Company will provide the required interface and assess the customer a DNAL Transport Termination charge.

Mileage measurement for the DNAL shall be in accordance with the regulations set forth in 6.7.11., following.

C. DNAL Transport Termination

1. A 0-30 bps analog DNAL Transport Termination provides an interface for the connection of an analog Low Speed Data Service facility for the Make Busy Arrangement.
2. A 1200 bps DNAL Transport Termination provides an interface for the capability to transmit data at a 1200 bps rate using a Voice Grade facility and requires a compatible modem at the customer designated premises for BCLID and MDS.
3. A 9600 bps DNAL Transport Termination provides an interface for the capability to transmit data at a 9600 bps rate using a Voice Grade facility and requires a compatible modem at the customer-designated premises for MDS and MDSI.

D. Rates and charges for DNALs are described in 6.7.1.M., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE (Cont'd)

6.2.11 SWITCHED DATA SERVICE (SDS)

Switched Data Service (SDS) is a two way service utilizing trunkside Switched Access Service. SDS provides a digital connection between a customer's premises and a suitably equipped circuit switched data end user's premises. Access is made via the standard dialing pattern for CST3 or Feature Group D Switched Access Service.

SDS is available on dedicated trunk groups capable of transmitting digital transmission speeds up to 56 kbps using Interface Group 6 or 9 equipped with individual transmission bit-stream supervisory signaling. SDS is not available with SS7 out of band signaling.

SDS is provided in suitably equipped end offices[1] and is provisioned as CST3 or Feature Group D. SDS traffic may not be combined on the same trunk group with traffic which is not circuit switched data.

Measurement of Switched Data Service usage shall be in accordance with the regulations set forth in 6.7.7, following, for CST3 and Feature Group D. Rates and charges for SDS are described in 6.7.1., following.

[1] SDS is not provided via a DTT facility equipped with Tandem Signaling Information.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.12 500 ACCESS SERVICE

500 Access Service is an originating service utilizing Trunkside Switched Access Service which provides for the forwarding of an end user dialed 0+ and 1+5YY+NXX-XXXX call to the customer, based on the NXX dialed. This six-digit routing function is performed at the required point of six-digit translation as determined by the Company.

500 Access Service is available only as a LATA-wide service and must be ordered to all end offices in a LATA and must be provisioned, at a minimum, to all access tandems in a LATA. 500 Access Service is provisioned as CST3 or Feature Group D. The customer may order 500 Access Service directly to an end office via CST3 or Feature Group D to only those offices designated by the Company.

5YY traffic may be combined in the same trunk group arrangement with non-5YY traffic or provisioned on a separate trunk group, unless prohibited by technical limitations.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.2 PROVISION AND DESCRIPTION OF SWITCHED ACCESS SERVICE

6.2.12 500 ACCESS SERVICE (Cont'd)

Calls originating in a LATA in which the customer has not ordered 500 Access Service are blocked. In addition, 0+ and 1+5YY+NXX-XXX calls originating in a LATA for which 500 Access Service has been established are blocked from 1+ sent-paid pay telephones (except customer owned coin operated telephones), 101XXXX, Inmate Service, toll restricted lines and multiparty service.

Measurement of 500 Access Service usage shall be in accordance with the regulations set forth in 6.7.7, following, for CST1, CST2, CST3, Feature Group B, Feature Group C and Feature Group D.

The rates and charges for 500 Access Service are described in 6.7.1., following.

ACCESS SERVICE

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSEs (Cont'd)**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSEs

A. Call Denial on Line or Hunt Group

This option allows the screening of terminating calls within the LATA, and the completion only of calls to 411, 611, 911, 8XX, 555-1212 and a Company specified set of NXXs within the Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Company electronic end offices and, where available, in electromechanical end offices. It is available with CSL and Feature Group A.

B. Service Code Denial on Line or Hunt Group

This option allows the screening of terminating calls within the LATA, and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411, 611 and 911). This feature is provided where available in all Company electronic end offices and electromechanical end offices. It is available with CSL and FGA.

C. Hunt Group Arrangement (BSE)

This option provides the ability to access sequentially one of two or more line side connections in the originating direction, when the access code of the line group is dialed. This feature is provided in all Company end offices. It is available with CSL and FGA. Resold and non-resold Lineside Access cannot be mixed in the same hunt group arrangement.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

C. Hunt Group Arrangement (Cont'd)

Hunting sequence arrangements are offered under two primary configurations:

1. Series Completion Hunting

This type of hunting can be accomplished in two ways:

- **Sequential Number Hunting**

The hunt starts with the called telephone number and ends with the last telephone number in the prearranged hunt group. The call is completed to the first idle telephone number encountered. Unless the first telephone number in the hunting group is called, only a portion of the hunting group will be tested starting at the point of entry into the group and continuing until the end of the group. The pre-arranged sequence can be consecutive (telephone numbers are in ascending numerical order) or non consecutive (any telephone number may hunt to any telephone number in the same central office switch).

- **Circular Hunting**

The hunt sequence starts with the called telephone number and proceeds in a pre-arranged order to test all numbers in the group. The call will be completed to the first idle line. Circular hunting allows the call to hunt through the entire group once, no matter where the call enters the hunt group (unlike Sequential Number Hunting, which only routes to the end of the hunt group). This arrangement is accomplished by routing the last number in the hunt group back to the first number of the hunt group.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

C. Hunt Group Arrangement (Cont'd)

2. Multiline Hunting

This type of hunting permits calls to a busy telephone number (the address of a line) to be routed to other specified lines. These lines do not require a telephone number (address) be assigned by the Telephone Company. Only those lines that require direct access by calling parties require the association/assignment of a telephone number.

Multiline Hunting is done sequentially by line within the hunt group as previously defined in Sequential Number Hunting. One telephone number (the begin-hunt number) must be assigned to the designated first line within the group of sequentially ordered lines that form the multiline hunt group. As previously stated, telephone numbers may be assigned to other lines within the multiline hunt group for direct access or to from subgroups of lines to be hunted.

D. Uniform Call Distribution Arrangement (BSE)

This option provides a type of multiline hunting arrangement which provides an equitable distribution of calls among the available lines in a hunt group. Where available, this feature is provided in Telephone Company electronic end offices only. It is available with CSL and FGA.

E. Nonhunting Number for Use with Hunt Group Arrangement or Uniform Call Distribution Arrangement

This option provides an arrangement for an individual line within a multiline hunt or uniform call distribution group that provides access to that line within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. Where available, this feature is provided in Telephone Company electronic end offices only. It is available with CSL and FGA.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)

F. Automatic Number Identification (ANI) (BSE)

This option provides the automatic transmission of a three-, seven- or ten-digit number and Information Digits to the customer's premises for calls originating in the LATA, to identify the calling station. The three-, seven- or ten-digit numbers will contain the following information: three-digit, NPA only; seven-digit, NXX-XXXX; ten-digit, NPA-NXX-XXXX. The ANI feature is an end office software function which is associated on a call-by-call basis with (a.) trunk groups routed directly between an end office and a customer's premises or, where technically feasible, with (b.) trunk groups between an end office and a customer's premises routed through an access tandem.

The seven-digit ANI telephone number is available (excluding 500 Access Service) with CST1 and Feature Group B, where provided, and CST2 and Feature Group C. The seven-digit ANI telephone number is available with 900 Access Service. With these Feature Groups and 900 Access Service, ANI will be provided only with DTT. ANI will be transmitted on all calls except those originating from four- or eight-party lines, pay telephones using CST1 or Feature Group B, when the end user has dialed 0- for operator assistance or when an ANI failure has occurred.

The ten-digit ANI telephone number is only available with CST3 and Feature Group D, including 500 Access Service, 800 DB Access Service and 900 Access Service provisioned as CST3 or Feature Group D. The ten-digit ANI telephone number consists of the Numbering Plan Area (NPA) plus the seven-digit ANI telephone number. The ten-digit ANI telephone number will be transmitted on all calls except those identified as four- or eight-party lines or when the end user has dialed 0- for operator assistance, in which case only the NPA will be transmitted (in addition to the information digit).

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

F. Automatic Number Identification (ANI) (Cont'd)

When 800 DB Access Service is ordered, the ten-digit ANI telephone number will be transmitted on all calls except those where ANI cannot be provided as stated above or from end offices not equipped to provide ANI. In these instances, only the three-digit NPA and the information digits described in the LATA Switching Systems Generic Requirements (LSSGR), Technical Reference FR-64, if applicable, will be transmitted.

With CST2 and Feature Group C, ANI is provided from end offices at which Company recording for end user billing is not provided, or where it is not required. It is not provided from end offices for which the Company needs to forward ANI to its recording equipment.

Technical specifications are delineated in Technical References TR-NPL-000175 and TR-NPL-000258.

Where ANI cannot be provided, (e.g., on calls from four- and eight-party services,) information digits will be provided to the customer.

Charge Number is the SS7 out of band signaling equivalent of the 10-digit ANI telephone number. Charge Number is the automatic transmission of the ten-digit billing number of the calling station and the originating line information when a CST3 or FGD trunk group is provisioned with SS7 out of band signaling. Charge Number is provided when the customer requests the ANI optional feature or ANI (BSE) on FGD or CST3 trunk groups provisioned with SS7 out of band signaling.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

F. Automatic Number Identification (ANI) (Cont'd)

ANI information and Charge Number information are provided based on the following requirements:

1. The telephone number and billing information may be used for billing and collection, routing, screening, and completion of the originating subscriber's call or transaction, or for services directly related to the originating subscriber's call or transaction;
2. The ANI information shall not be reused or resold without first (A) notifying the originating subscriber and (B) obtaining the affirmative consent of such subscriber for such reuse or resale; and
3. ANI information shall not be disclosed, except as permitted by (1) and (2), above, for any purpose other than performing the services or transactions that are the subject of the originating subscriber's call, (ii) ensuring network performance security, and the effectiveness of call delivery, (iii) compiling, using and disclosing aggregate information, and (iv) complying with applicable law or legal process.

ANI information digits (ANII) are the two digits that precede the seven- or ten-digit telephone number on the ANI record. ANI information digits inform the customer of the calling party's class of service for billing, routing and special handling purposes. Flexible ANI is a network enhancement that allows the Company to install new ANI information digits with a software update. The two digit ANII pair assignments are made by the North American Numbering Plan Administrator at Telcordia and are delineated in Technical Reference TR-NPL-000258.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

F. Automatic Number Identification (ANI) (Cont'd)

Flexible ANI (BSE) is available with ANI Optional Feature on FGD or ANI (BSE) on CST3 Service when the customer has new or existing CST3 or FGD ANI trunk groups in suitably equipped Company end offices. Flexible ANI is not available with FGB, FGC, or CST1 or CST2 Services.

Flexible ANI may be ordered coincident with the installation of associated trunk activity or subsequent (e.g., without) associated trunk activity. This option is provided on a Carrier Identification Code (CIC) basis per end office. Once the Flexible ANI option is activated per CIC code in an end office, all new or existing FGD or CST3 trunk groups equipped with ANI will be capable of handling the new ANIii pairs installed via the Flexible ANI software.

Nonrecurring charges, as set forth in 6.8.2, following, are not applicable when the customer orders Flexible ANI for the sole purpose of determining payphone compensation to Payphone Service Providers. Nonrecurring charges, as set forth in 6.8.2, following, are applicable when the customer orders Flexible ANI for purposes other than the determination of payphone compensation.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)****G. Up to 7 Digit Outpulsing to Customer****1. Access Digits**

This option provides for the end office capability of providing up to 7 digits of the uniform access code 950-XXXX or 1 + 950-XXXX to the customer's premises. The customer can request that only some of the digits in the access code be forwarded. The access code digits would be provided to the customer's premises using multifrequency signaling, and transmission of the digits would precede the forwarding of ANI if that feature were provided. It is available with CST1 and Feature Group B.

2. Called Party Telephone Number**AVAILABLE IN ID (SPOKANE LATA), OR, WA ONLY**

This option provides the end office capability of providing up to seven digits of the called party telephone number to the customer's premises. The customer may request that only some of the digits in the telephone number be forwarded. The telephone number digits will be forwarded using multifrequency (MF), DTMF or dial-pulse address signaling. This option is available with bundled *DID* Switched Access Service.

3. Called Directory Number Delivery (BSE)**AVAILABLE IN ID (SPOKANE LATA), OR, WA ONLY**

Called Directory Number Delivery (CDND) provides the end office capability of routing up to seven digits of the Called Party Telephone number to the customer's premises. The customer may request that only some of the digits in the telephone number be forwarded. The telephone number digits will be forwarded using Multifrequency (MF) Dual-Tone Multifrequency (DTMF) or Dial-Pulse (DP) address signaling. This option is available only with unbundled *DID* Switched Access Service.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)

H. Cut-Through

This option allows end users of the customer to reach the customer's premises by using the end-of-dialing digit (#). This option provides for connection of the call to the premises of the customer indicated by the 101XXXX uniform access code upon receipt of the end-of-dialing digit (#). The Company will not record any other dialed digits for these calls. This option is available with CST3 and Feature Group D.

I. Delay Dial-Start-Pulsing Signaling

This option provides a method of indicating to the near-end trunk circuit readiness to accept address signaling information by the far-end trunk circuit. Delay dial is often referred to as an off-hook, on-hook signaling sequence. The delay dial signal is the off-hook interval and the start-pulsing signal is the on-hook interval. With integrity check, the calling office will not outpulse until a delay dial (off-hook) signal followed by a start-pulsing (on-hook) signal has been identified at the calling office. This option is available with CST2 and Feature Group C.

J. Immediate Dial-Pulse Address Signaling

This option provides for the forwarding of dial pulses from the Company end office to the customer without the need of a start-pulsing signal from the terminating office. It is available with CST2 and Feature Group C.

K. Dial Pulse Address Signaling

This trunkside option provides for the transmission of number information, e.g., called number, between the end office switching system and the customer's POT in either direction by means of direct current pulses. It is available with CST2, Feature Group C and *DID* Switched Access Service.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)****L. Service Class Routing**

This option provides the capability of directing originating traffic from an end office to a trunk group to a customer designated premises, based on the line class of service (e.g., coin, multiparty or hotel/motel), service prefix indicator (e.g., 00+, 00-, 0+, 0-, 1+, 01+ or 011+) or service access code (e.g., 5YY, 8XX or 900). A customer may direct all originating calls from an end office to a tandem trunk group to a single customer point of termination (POT) or multiple points of termination (POTs) when ordered with MPTS as referred to in 6.1.2.A.4., preceding, based on the line class of service, service prefix indicator or service access code. It is provided in suitably equipped end office or access tandem switches and is available with CST2, CST3, Feature Groups C and D based on technical limitations.

M. Alternate Traffic Routing (BSE)

The types of Alternate Traffic Routing available are described in 1. through 3., following. When Alternate Traffic Routing is added subsequent to initial service installation, service rearrangement charges are determined as set forth in 6.7.1, following.

1. Multiple Customer Premises Alternate Routing

- a. This option provides the capability of directing originating traffic from an end office (or appropriately equipped access tandem) via a trunk group (the "high usage" group) to a customer designated premises until that group is fully loaded, and then delivering additional originating traffic (the "overflowing" traffic) from the same end office or access tandem to a different trunk group (via one or more intermediate high usage groups) to different customer designated premises until the originating traffic is directed to a final trunk group. The customer shall specify the last trunk CCS desired for the high usage group and each intermediate group(s). It is provided in suitably equipped end office or access tandem switches and is available with CST1, CST2, CST3, Feature Groups B, C and D.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES****M. Alternate Traffic Routing****1. Multiple Customer Premises Alternate Routing (Cont'd)****b. Multiple Customer Premises Alternate Routing with MPTS [1]**

This option provides the capability of directing originating traffic from an end office via a direct trunk group (the high usage group) and deliver originating traffic (the overflowing traffic) from the same end office through the tandem to a tandem routed trunk group (the "final" group) to a customer designated point of termination (POT). The tandem trunk group must be routed to the customer designated point of termination (POT) that is specified for the Tandem Sector of the originating end office. It is provided in suitably equipped end office or access tandem switches and is available with CST2, CST3, Feature Groups C and D. MPTS Alternate Routing is not available on CST3 or FGD Service provisioned on a DTT facility equipped with Tandem Signaling Information.

Alternate traffic routing through the tandem to a multiple customer point of termination (POT) is not an option with MPTS. A customer may not overflow tandem traffic from one customer designated point of termination (POT) to a second customer designated point of termination (POT).

[1] Effective February 20, 1999, MPTS is limited to existing customers on existing MPTS trunk groups only. Customers with MPTS in service may augment existing MPTS trunk groups until the service is moved or disconnected. If the service is moved or disconnected, MPTS may not be reestablished.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES****M. Alternate Traffic Routing (Cont'd)****2. End Office Alternate Routing When Ordered in Trunks**

This option provides an alternate routing arrangement for customers who order in trunks and have access for a particular serving arrangement to an end office via two routes, one route via an access tandem and one direct route. The feature allows the customer's originating traffic from the end office to be offered first to the direct trunk group and then overflow to the access tandem group. It is provided in suitably equipped end offices and is available with CST1, CST2, CST3, Feature Groups B, C and D.

3. End Office Alternate Routing to a Customer-Provided Tandem Premises

This option provides an alternate routing arrangement for customers who order in trunks and have access to an end office via two routes: one route equipped with Tandem Signaling Information (TSI) via a customer-provided tandem premises and one direct route without TSI. The option allows FGD or CST3 originating traffic from an end office to be offered first to the direct trunk group and then overflow to the customer-provided tandem group. When the customer selects this option, the customer may not have for the same end office an alternate route to a Company access tandem. This option is provided in suitably equipped end offices and is available with FGD or CST3 Service only.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)****N. Trunk Access Limitation**

This option provides for the routing of originating 900 service calls to a specified number of transmission paths in a trunk group, in order to limit (choke) the completion of such traffic to the customer. Calls to the designated service which could not be completed over the subset of transmission paths in the trunk group, i.e., the choked calls, would be routed to reorder tone. It is provided in all Company electronic end offices and where available in electromechanical end offices. It is available with CST2, CST3, Feature Groups C and D.

O. International Carrier Option

This option allows for CST3 and Feature Group D end offices or access tandem switches equipped for International Direct Distance Dialing to be arranged to forward international calls to a carrier other than the one designated by the end user through IC Subscription or 101XXXX dialing. There are two additional features provided with this option as described following.

1. International Carriers International Feature

This feature allows an international carrier without a presence in the LATA to authorize the Company to forward its end users' international calls to a domestic carrier for transport to the international carrier.

2. Domestic Carriers International Feature

This feature allows a domestic carrier to authorize the Company to forward its end users' international calls to an international carrier with a presence in the LATA

In either case, this arrangement requires provision of written verification to the Company that the customer is allowed to forward such calls. The written verification must be in the form of a letter of agency authorizing the customer to order the option on behalf of another carrier.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)

P. SWITCHNET 56 Service Switching Capability

This option allows for a connection between the customer's premises and a suitably equipped end users premises utilizing end office and/or access tandem switching capable of transmitting 56 kbps digital data. SWITCHNET 56 Service is available in conjunction with CST3 or Feature Group D from suitably equipped electronic end offices and/or access tandems. When SWITCHNET 56 Service is ordered in conjunction with CST3 or FGD, it requires the use of a separate trunk group equipped with Interface Group 6. When SWITCHNET 56 is used with CST3 or FGD, the standard CST3 or FGD dialing pattern is used. This dialing pattern may vary according to the technology implemented in each specific Company end office and/or access tandem (i.e., dialing #56 may be required dependent upon the switching technology).

Q. WATS Access Service (WATS)

1. Description

At the option of the customer, WATS Access Service as specified following may be provided at Company designated end office switches, referred to as WATS Serving Office(s) (WSO). WATS Serving Offices are identified in National Exchange Carrier Association, Inc. Tariff F.C.C. No. 4. WATS Access Service is provided in conjunction with Lineside and Trunkside Switched Access Service and any compatible Private Line Transport Service, referred to as WATS Access Line(s). The WATS Access Line as described in 5.2, preceding, is required to connect the WSO to the end user's premises.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES****Q. WATS Access Service (WATS)****1. Description (Cont'd)**

The WSO is capable of performing the necessary routing, screening and recording functions for 800/800-type Service, WATS and similar services and is provided only for use at the closed end of such services. The WSO may be capable of performing some or all of the WATS Access Service Arrangements and WATS Access Service Options as described in 2. and 3., following. Technical limitations resident in certain end office switches that are designated as a WSO, may preclude the availability of certain WATS Access Service Arrangements and WATS Access Service Options. In addition, Answer Supervision for Use with WATS Access Service, as described in 6.3.3.A., following, is available only in suitably equipped WATS Serving Offices.

WATS Access Service can be arranged for originating-only, terminating-only or two-way calling, depending on the specific arrangement employed. Dial-pulse or dual-tone multifrequency address signaling and either loop start or ground start supervisory signaling is used to work with any compatible Private Line Transport Service, such as Analog Private Line - Voice Grade or PLTS DS1 Services. Unless otherwise described herein, all options and optional features that are available with Lineside or Trunkside access are available in conjunction with WATS Access Service. Options and optional features that are available with Private Line Transport Services used as WATS Access Lines are provided as set forth in Section 7, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

Q. WATS Access Service (WATS)

1. Description (Cont'd)

WATS Access Lines are subject to all applicable Private Line Transport Service Channel Termination rates as specified in Section 7, following, for connections between the end user's premises and the WSO wire center. In cases where WATS Access Service is requested from a wire center that is not a WSO, Channel Mileage, as specified in Section 7, following, will apply to the connecting facility provided between the end user's serving wire center and the WSO wire center where the WATS Access Service is provided. Channel Mileage will be calculated on the airline distance between the end user's serving wire center and the WSO wire center.

In cases where WATS Access Service is provided from a wire center that is a WSO but lacks the capability for the requested WATS Access Service arrangement, no Channel Mileage charges will apply.

2. WATS Access Service Arrangements

WATS Access Service is available as provided in five unique arrangements (i.e., Packages) which are differentiated by service type (e.g., WATS and 800/800-type Service), directionality, call type, service prefix and traffic type. WATS Access Service Arrangements are available in conjunction with Lineside and Trunkside Access as specified herein. A brief description of each WATS Access Service Arrangement is following.

ACCESS SERVICE

OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

Q. WATS Access Service (WATS)

2. WATS Access Service Arrangements (Cont'd)

a. Package 1 - Local/OUTWATS (Band N)

An originating-only service that delivers local, intraLATA and interLATA traffic to the customer. Blocking is performed by the Company on some traffic types as detailed in f., following.

b. Package 2 - OUTWATS (Band 9)

An originating-only service that delivers intraLATA/interstate and all interLATA traffic to the customer. Local and intraLATA/intrastate traffic is retained and delivered by the Company. The Company will bill the end user directly for charges associated with local and intraLATA/ intrastate usage, at the applicable state intraLATA Band 0 OUTWATS rates. This arrangement is available only with CST2, CST3, Feature Groups C and D. In addition, the Company will retain or block certain traffic types as detailed in f., following.

c. Package 3 - Two-Way WATS (Band Y)

A two-way service that delivers local, intraLATA and interLATA traffic to the customer and completes traffic to an end user's premises. Blocking of certain traffic types is performed by the Company as detailed in f., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

Q. WATS Access Service (WATS)

2. WATS Access Service Arrangements (Cont'd)

d. Package 4 - Traditional WATS (Bands 1-6)

An originating-only service that delivers all interstate traffic to the customer for the banded (i.e., screened) serving areas that have been ordered by the customer. Calls that are destined to banded serving areas that are not ordered by the customer will be blocked by the Telephone Company. This arrangement is available only with CST2, CST3, Feature Groups C and D. In addition, the Telephone Company will retain or block certain traffic types as detailed in f., following.

e. Package 5 - INWATS

A terminating-only service that completes traffic to an end user's premises. This service is available in conjunction with a customer's 800/800-type Service.

f. The following matrix specifies the directionality, call type, service prefix and traffic type associated with the WATS Access Service Arrangements described preceding.

OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

Q. WATS Access Service (WATS) (Cont'd)

3. WATS Access Service Options

WATS Access Service Options are available in conjunction with the WATS Access Service Arrangements detailed in 2., preceding. These options are provided in Company designated WATS Serving Offices and are available for use with WATS Access Service only. WATS Access Service Options are available in conjunction with Lineside and Trunkside Access, as specified herein.

a. Band Advance

This option, which is provided in association with two or more WATS Access Line groups, provides for the automatic overflow of terminating calls to a WATS Access Line group, when that group has exceeded its call capacity, to another WATS Access Line group.

b. End Office End User Line Screening

This option provides the ability to verify that an end user has dialed a called party address (by screening the called NPA and/or NXX on the basis of geographical bands selected by the Telephone Company) which is in accordance with that end user's service agreement with the customer (e.g., WATS). This option is available only with CST2, CST3, Feature Groups C or D and originating WATS Access Lines.

c. Hunt Group

This option provides the ability to access sequentially one of two or more WATS Access Lines in the terminating direction, when the hunting number of the WATS Access Line group is forwarded from the customer to the Telephone Company.

3. WATS Access Service Options (Cont'd)

d. Uniform Call Distribution

This option provides a type of multiline hunting which provides for an even distribution of terminating calls among the available WATS Access Lines in the hunt group.

e. Nonhunting Number for Use with Hunt Group or Uniform Call Distribution

This option provides for an individual WATS Access Line that is within a multiline hunt or uniform call distribution group, to provide access to the WATS Access Service within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed.

f. The following matrix specifies which WATS Access Service Options as described in a. - e., preceding, are available with the WATS Access Service Arrangements.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)

R. InterLATA Toll Denial

This option provides the screening of all calls on terminating CSL and FGA lines and for the completion only of calls to 411, 611, 911, 800/800-type, 555-1212, Local Information Delivery Services and 0+ or 1+ intraLATA. All interLATA calls, 950-XXXX or 101XXXX are routed to a recorded announcement.

This feature is provided in all Company end offices where technically available. It is available with CSL and Feature Group A. This feature does not affect calls placed on originating CSL and FGA lines.

Customers requesting Lineside Access without the InterLATA Toll Denial option, will be responsible for InterLATA calls recorded on CSL and FGA line(s).

S. 950 on FGD and CST3

1. 950 on FGD

Feature Group D (FGD) Access Service, as set forth in 6.2.4, preceding, may be ordered to route calls from a designated 950-XXXX access code to FGD access service. When a customer has FGD access service and does not have Feature Group B access service from a particular end office, 950 on FGD may be ordered to activate a customer's designated 950-XXXX access code in that end office. This will allow the Company to direct those designated 950-XXXX calls dialed by the customer's end users to the customer's FGD access service.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES**

S. 950 on FGD and CST3

1. 950 on FGD (Cont'd)

When a customer has both FGB and FGD access service and orders 950 on FGD in a particular end office, the Company will direct those designated 950-XXXX calls dialed by the customer's end users to the customer's FGD access service in that end office.

In both methods, the customer must be prepared to handle normally dialed FGD calls, as well as calls dialed with the designated 950-XXXX access code which requires the customer to receive additional address signaling. Such calls will be rated as FGD.

950 on FGD will be provided from Company end offices and tandems, where technically feasible. Effective with the date of this tariff (July 1, 1998) 950 on FGD is available only to customers where the 950 carrier identification code is the same as the FGD carrier identification code. The customer must specify the end office where 950 on FGD is to be activated to allow calls from a designated 950-XXXX access code to be routed over FGD access service. The customer is precluded from having originating 950 on FGD and originating FGB in the same end office utilizing the same 950-XXXX CIC.

2. 950 on CST3

CST3 Access Service as set forth in 6.2.6, preceding, may be ordered to route calls from a designated 950-XXXX access code to CST3 access service. When a customer has CST3 access service and does not have CST1 access service from a particular end office, 950 on CST3 may be ordered to activate a customer's designated 950-XXXX access code in that end office. This will allow the Company to direct those designated 950-XXXX calls dialed by the customer's end users to the customer's CST3 access service.

When a customer has both CST1 and CST3 access service and orders 950 on CST3 in a particular end office, the Company will direct those designated 950-XXXX calls dialed by the customer's end users to the customer's CST3 access service in that end office.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES**

- S. 950 on FGD and CST3
- 2. 950 on CST3 (Cont'd)

In both methods, the customer must be prepared to handle normally dialed CST3 calls, as well as calls dialed with the designated 950-XXXX access code which requires the customer to receive additional address signaling. Such calls will be rated as CST3.

950 on CST3 will be provided from Company end offices and tandems, where technically feasible. Effective with the date of this tariff (July 1, 1998) 950 on CST3 is available only to customers where the 950 carrier identification code is the same as the CST3 carrier identification code. The customer must specify the end office where 950 on CST3 is to be activated to allow calls from a designated 950-XXXX access code to be routed over CST3 access service. The customer is precluded from having originating 950 on CST3 and originating CST1 in the same end office utilizing the same 950-XXXX CIC.

T. Call Transfer (BSE)

This option allows the customer to transfer an incoming call to a third party or add a third party to an existing incoming call, forming a three party connection, and then to leave the connection without disconnecting the call. This feature is provided only in suitably equipped end offices with CSL and FGA.

U. Three-Way Calling (BSE)

This option allows a customer to add a third party to an established local or long distance connection without the assistance of an operator. The third party is called by the customer initiating the Three-Way Calling on either a local or long distance basis. This feature is provided only in suitably equipped end offices with CSL and FGA.

V. Caller Identification - Number (ICLID) (BSE)

Caller Identification - Number (ICLID) provides the customer with the calling party's directory number at the time the call is received. The calling number is transmitted to the customer during the first silent interval of the ringing cycle. The number is displayed on customer-provided equipment. This option is only available from appropriately equipped Company electronic end office switches with CSL and FGA. Technical specifications are delineated in Technical Reference TR-NWT-000031.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)****W. Caller Identification - Bulk (BCLID) (BSE)**

Caller Identification - Bulk (BCLID) allows a customer with a CSL or FGA Switched Access multiline hunt group to receive call-related information at the time a call is received. The following call related information is transmitted per incoming call:

- The calling and called directory number (DN)
- The time of day the call was placed
- The busy/idle status of the called DN
- The calling line type (individual or group)

A DNAL is required between the customer's FGA dial tone office and the customer's premises for the transmission of the call-related data. The Call Data input/output Central Office Facility provides the central office facilities necessary to transmit Call Data Information over the DNAL.

The customer shall be responsible for the provision of a compatible Customer Premises Equipment (CPE) modem which will receive, translate, display and/or store the transmitted data. The modem speed is dependent on the type of DNAL provided as set forth in 6.2.10, preceding. The installation, repair and technical capability of that equipment to function in conjunction with the service specified herein is the responsibility of the customer.

For incoming calls from callers served by PBXs, only the main number of the PBX will be transmitted. For incoming calls from callers in a multiline hunt group, only the main number of the hunt group will be transmitted.

Caller Identification-Bulk will be provided where technically feasible with CSL and FGA service. Technical specifications are delineated in Technical Reference GR-32-CORE.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)****X. Message Delivery Service (BSE) and Message Delivery Service - Interoffice
(BSE)**

Message Delivery Service (MDS) and Message Delivery Service - Interoffice (MDSI) transmits call-related information pertaining to all incoming telephone calls to the customer's Switched Access CSL or FGA multiline hunt group.

MDS and MDSI are available in technically equipped Company-designated electronic end office switches with CSL or FGA Switched Access Services. Technical specifications are delineated in Telcordia Technologies Generic Requirements document GR-283-CORE Issue 3, February 2002, Simplified Message Desk Interface (SMDI) and Telcordia Technologies Generic Requirements GR-1193-CORE Issue 2, February 2002, Generic Requirements for a Dedicated Data Link Interface Between an End Office SPCS and CPE FSD 04-07-0000.

Rates and charges for MDS and MDSI are set forth in 6.8.2, following,

1. Message Delivery Service (BSE)

MDS call-related information includes the following:

- The called directory number.
- The calling directory number (if the central office switch that serves the calling party is connected to the same Company Common Channel Signaling Network as the central office switch serving the MDS customer and is equipped with the appropriate software).
- An indication that the call was forwarded as the result of a busy condition, don't answer condition or if the call was a direct dialed call.

A DNAL, provided as set forth in 6.2.10, preceding, is required between the customer's CSL or FGA dial tone office and the customer's premises for the transmission of the call-related information to the customer's premises.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES****X. Message Delivery Service (BSE) and Message Delivery Service - Interoffice
(BSE)****1. Message Delivery Service (BSE) (Cont'd)**

In addition to Switched Access CSL or FGA service and the DNAL, the following MDS rate categories are required as described following:

- The Call Data input/output Central Office Facility is assessed per DNAL connection. The Call Data input/output Central Office Facility provides the central office facilities necessary to transmit the call-related information over the DNAL.
- The MDS Arrangement is assessed per CSL or FGA multiline hunt group arrangement. The MDS Arrangement allows call-related information for calls forwarded to lines arranged in a multiline hunt group to be directed to the associated Call Data input/output Central Office Facility.
- The Call Data charge is assessed per CSL or FGA line in the multiline hunt group. The Call Data allows lines arranged in a multiline hunt group to identify the specific terminal number of the call received as part of the call-related information directed to the associated Call Data input/output Central Office Facility.

The customer must order a DNAL, CSL or FGA Switched Services and the MDS (BSE) at each central office where the customer has clients. More than one CSL or FGA multiline hunt group may be served by the same DNAL and Call Data input/output Central Office Facility where the central office switch type permits. When used in conjunction with a Message Waiting Indication feature, the customer must have compatible message desk customer-provided equipment.

The customer shall be responsible for the provision of a compatible Customer Premises Equipment (CPE) modem that will receive, translate, display and/or store the transmitted call-related information. The modem speed is dependent on the type of DNAL provided as set forth in 6.2.10, preceding. The installation, repair and technical capability of that equipment to function in conjunction with the service specified herein is the responsibility of the customer.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

X. Message Delivery Service (BSE) and Message Delivery Service - Interoffice (BSE) (Cont'd)

2. Message Delivery Service - Interoffice (BSE)

MDSI call-related information includes the following:

- The 10- digit called directory number.
- The 10-digit calling directory number (if the central office switch that serves the calling party is connected to the same Company Common Channel Signaling Network as the central office switch serving the MDSI customer and is equipped with the appropriate software).
- An indication that the call was forwarded as the result of a busy condition, don't answer condition or if the call was a direct dialed call.

A DNAL, provided as set forth in 6.2.10, preceding, is required between the customer's CSL or FGA dial tone office (i.e., MDSI hub office) and the customer's premises for the transmission of the call-related information to the customer's premises.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

- X. Message Delivery Service (BSE) and Message Delivery Service - Interoffice (BSE)
- 2. Message Delivery Service - Interoffice (BSE) (Cont'd)

In addition to Switched Access CSL or FGA service and the DNAL, the following MDSI rate categories are required as described following:

- The Call Data input/output Central Office Facility is assessed per DNAL connection. The Call Data input/output Central Office Facility provides the central office facilities necessary to transmit the call-related information over the DNAL.
- The MDSI Arrangement is assessed per CSL or FGA multiline hunt group arrangement. The MDSI Arrangement allows call-related information for calls forwarded to lines arranged in a multiline hunt group to be directed to the associated Call Data input/output Central Office Facility.
- The Call Data - Interoffice charge is assessed per CSL or FGA line in the multiline hunt group. The Call Data - Interoffice allows lines arranged in a multiline hunt group to identify the specific terminal number of the call received as part of the call-related information directed to the associated Call Data input/output Central Office Facility.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES**

- X. Message Delivery Service (BSE) and Message Delivery Service - Interoffice (BSE)
- 2. Message Delivery Service - Interoffice (BSE) (Cont'd)

The customer must have a Switched Access CSL or FGA multiline hunt group in the same central office switch where the DNAL, Call Data input/output Central Office Facility, MDSI arrangement and Call Data - Interoffice terminate. More than one CSL or FGA multiline hunt group may be served by the same DNAL and Call Data input/output Central Office Facility where the central office switch type permits. When used in conjunction with a Message Waiting Indication feature, the customer must have compatible message desk customer-provided equipment.

The MDSI customer receives their call-related information from all central offices within the LATA served by the same Company Common Channel Signaling Network at the MDSI hub office.

The customer shall be responsible for the provision of compatible Customer Premises Equipment (CPE) modem that will receive, translate, display and/or store the transmitted call-related information. The modem speed is dependent on the type of DNAL provided as set forth in 6.2.10, preceding. The installation, repair and technical capability of that equipment to function in conjunction with the service specified herein is the responsibility of the customer.

MDSI traffic volumes may require the customer and the Company to cooperatively negotiate for more than one MDSI service arrangement. The Company maintains its right to limit growth of an existing MDSI service arrangement or the installation of a new MDSI service arrangement based on available capacity of the end office switch and/or its associated network when the Company determines that such growth could overload Company or customer facilities and impair the provision of acceptable service levels as described in 6.5.1, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)

Y. *DID* Trunk Queuing and Basic Announcement (BSE)

Direct Inward Dial (*DID*) Trunk Queuing is a network capability that allows customers to receive and hold calls coming into a busy *DID* trunk group. The service will place these calls in a queue, to be held until a trunk between the serving wire center and the customer's CPE is available. When a trunk becomes available, in the same order of call arrival a call will drop out of queue and be connected to the trunk. Calls held in queue will hear ringing.

- Delay Announcement

This option allows for incoming calls held in queue to hear a recorded announcement after a predetermined amount of time. The standardized announcement can be accessed a maximum of four times. Depending upon the customer's choice, ringing or silence will be returned after each announcement.

The provision of this feature requires that the customer subscribe to a sufficient number of facilities to adequately handle the volume of incoming calls.

The customer must specify the number of calls (maximum of 255) held in queue. In addition, the customer must specify the length of time a call is held in queue before going to delay announcements. The customer must also specify the number of announcements (maximum of four) and the amount of time between announcements. Changes to these values may only be made through the issuance of a service order. A nonrecurring charge as set forth in 6.8.2, following, will apply.

All *DID* station numbers on a *DID* trunk group must be equipped with trunk queuing. This option is available with *DID* Switched Access Service in suitably equipped end offices.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSEs (Cont'd)

Z. Make Busy (BSE)

Make Busy provides a method for making lines appear busy to the serving wire center while they are in an idle state. This function would also allow a customer to have all incoming calls routed to another location upon activation of a CPE device. Calls to these lines will either encounter a busy condition or be completed to the alternate location, transparently to the caller. The capability is activated by a customer provided key at the customer's premises. The activation signal is transmitted to the serving wire center via a DNAL, provided as set forth in 6.2.10, preceding, for each key. This option is available with CSL and FGA where technically feasible. Technical specifications are delineated in Technical Reference GR-569-CORE.

AA. Call Forwarding Variable (BSE)

Call Forwarding Variable permits the customer to initiate call forwarding/automatic transfer of all incoming calls to another telephone number on an as-needed basis. Calls can be forwarded to most telephone numbers either inside or outside the customer's local calling area. Once the customer establishes Call Forwarding, it remains in effect until it is cancelled by the customer. The customer cannot answer calls once this feature is activated. Call Forwarding Variable is provided in suitably equipped end offices and is available with CSL and FGA.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)****AB. Queuing for Use With UCD (BSE)**

- Queuing

An arrangement whereby incoming calls that are placed to lines within a UCD system can be held in queue if all lines within the system are busy. Calls in queue will be held in their order of arrival until a line becomes available. Calls in queue are served on a first-in first-out basis. Calls held in queue will hear ringing until answered.

- Delay Announcement

This option allows for incoming calls held in queue to hear a recorded announcement after a predetermined amount of time. The standardized announcement can be accessed a maximum of four times. Depending upon the customer's choice, ringing or silence will be returned after each announcement.

The provision of this feature requires that the customer subscribe to a sufficient number of facilities to adequately handle the volume of incoming calls.

The customer must specify the number of calls (maximum of 255) held in queue. In addition, the customer must specify the length of time a call is held in queue before going to delay announcement. The customer must also specify the number of announcements (maximum of four) and the amount of time between announcements. Changes to these values may only be made through the issuance of a service order. A nonrecurring charge as set forth in 6.8.2, following, will apply.

Queuing on UCD will only be provided where technically feasible and is available with CSL and FGA.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)****AC. Signaling System Seven (SS7) Out of Band Signaling**

This option provides SS7 out of band signaling on a CST3 or FGD transmission path group. This option provides the customer the ability to use out of band signaling to set up trunks on a per call basis. CCSAC Service as described in 20.2.1, following, is required between the customer's Signaling Point of Interface (SPOI) and the Telephone Company's Signal Transfer Point (STP) for SS7 out of band signaling in each LATA.

SS7 out of band signaling provides the automatic transmission of the following parameters:

1. Access Transport Parameter (ATP) provides automatic transmission of information from the originating calling location through the Common Channel Signaling Network. Information supplied using ATP may consist of one or more of the following: Called Party Subaddress; Calling Party Subaddress; High and Low Layer Compatibility and Compatibility Checking by the called party's equipment. ATP is available when Feature Group D or CST3 service is equipped with SS7 out of band signaling and Clear Channel Capability.
2. Calling Party Number (CPN) is the automatic transmission of the calling party's ten-digit telephone number to the customer's premises for calls originating in the LATA. The ten-digit number consists of the Numbering Plan Area (NPA) plus the seven-digit telephone number. The Company will automatically transmit CPN with SS7 out of band signaling in those offices suitably equipped with the software that allows customers to elect to block their CPN information from being displayed to the called party. This software allows the customer to block their CPN on a per call basis, and transmits a "privacy indicator" as part of the CPN information.
3. Charge Number is the SS7 out of band signaling equivalent of the 10-digit ANI telephone number. Charge Number is the automatic transmission of the ten-digit billing number of the calling station and the originating line information when a CST3 or FGD trunk group is provisioned with SS7 out of band signaling. Charge Number is provided when the customer requests the ANI optional feature or ANI (BSE) on FGD or CST3 trunk groups provisioned with SS7 out of band signaling.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

AC. Signaling System Seven (SS7) Out of Band Signaling

3. (Cont'd)

Charge Number information is provided based on the following requirements:

- a. the telephone number and billing information may be used for billing and collection, routing, screening, and completion of the originating subscriber's call or transaction, or for services directly related to the originating subscriber's call or transaction;
- b. the Charge Number information shall not be reused or resold without notifying the originating subscriber and obtaining the affirmative consent of such subscriber for such reuse or resale; and
- c. Charge Number information shall not be disclosed, except as permitted by a. and b., above, for any purpose other than:
 - performing the services or transactions that are the subject of the originating subscriber's call,
 - ensuring network performance security, and the effectiveness of call delivery,
 - compiling, using and disclosing aggregate information, and
 - complying with applicable law or legal process.
4. Carrier Selection Parameters (CSP) is the automatic transmission of a signaling indicator which signifies to the customer that the call being processed originated from a presubscribed line or by dialing the 101XXXX Code.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES

AC. Signaling System Seven (SS7) Out of Band Signaling (Cont'd)

5. Carrier Identification Parameter (CIP)

Carrier Identification Parameter is an optional feature which identifies and transmits the Carrier Identification Code (CIC) of the presubscribed carrier or the Access Code (101XXXX) dialed by the calling party to the customer as part of the Initial Address Message (IAM). CIP is available with originating CST3 and Feature Group D Switched Access Service from suitably equipped SS7 end offices and tandems on a per trunk basis. The CIP optional feature requires the customer to purchase CCSAC Service as set forth in Section 20, following. The description and application of rates and charges are set forth in 6.7.1, following.

The technical specifications for ATP, CPN, CSP and CIP parameters are described in Technical References GR-905-CORE, GR-394-CORE and in Qwest Corporation Technical Publication 77342.

When rearranging signaling to SS7 out of band signaling, a SS7 Out of Band Signaling Rearrangement Charge applies as described in 6.7.1.C.5., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.1 COMMON SWITCHING OPTIONAL FEATURES AND BSES (Cont'd)

AD. Clear Channel Capability (BSE)

Clear Channel Capability (CCC) is the ability to send any combination of ones (marks) and zeros (spaces) in the 192 information bits of each frame. This permits 24 DSO-64 kbps services or 1.536 Mbps of customer information on the 1.544 Mbps line rate.

Bipolar Eight Zero Substitution (B8ZS) line code conformity is required. The B8ZS line code is described in Technical Reference GR-334-CORE.

CCC is available on CST3 or FGD service when the trunkside service is equipped with SS7 Out of Band Signaling and Interface Group 6 or 9 on separate trunk(s) in suitably equipped digital Company end offices or access tandems. CCC may be utilized in conjunction with 800 DB Access Service for transmission of 8XX data traffic where technically feasible.

CCC equipped trunkside service requires a specific traffic type (i.e., CCC Originating and/or CCC Terminating) as set forth in 6.1.1, preceding.

The description and application of rates and charges for CCC are set forth in 6.7.1.O., following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSEs (Cont'd)****6.3.2 TRANSPORT TERMINATION OPTIONAL FEATURES AND BSEs****A. Operator Trunk - Coin, Non-Coin, or Combined Coin and Non-Coin**

This option may be ordered to provide coin, non-coin, or combined coin and non-coin operation. It is available only with CST2, CST3, Feature Group C and D. Non-coin trunks are provided in Company electronic and electromechanical end offices. Coin and combined coin and non-coin trunks are provided only at Company electronic end offices and other Company end offices where equipment is available. This option is provided as a trunk type of Transport Termination and is not available with SS7 out of band signaling.

1. Coin

This arrangement provides initial coin return control and routing of 00+, 00-, 0+, 0-, 1+, 01+ or 011+ prefixed originating coin calls requiring operator assistance to the customer's premises. Because operator assisted coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing option.

The operator assistance coin calling arrangement is normally ordered by the customer in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the customer's operator service positions, rather than in the customer's manual cord boards.

2. Non-Coin

This arrangement provides the routing of 00+, 00-, 0+, 0-, 1+, 01+ or 011+ prefixed originating non-coin calls requiring operator assistance to the customer's premises. Because operator assisted non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing option.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.2 TRANSPORT TERMINATION OPTIONAL FEATURES AND BSES**

- A. Operator Trunk - Coin, Non-Coin, or Combined Coin and Non-Coin
2. Non-Coin (Cont'd)

The operator assistance non-coin calling arrangement is normally ordered by the customer in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the customer's operator service positions, rather than in the customer's manual cord boards. When so equipped, the ANI feature provides the forwarding of information digits which identify that the call has originated from a hotel or motel, and whether room number identification is required, or that special screening is required, e.g., for coinless public stations, dormitory or inmate stations, or other screening arrangements agreed to between the customer and the Company.

3. Combined Coin and Non-Coin

This arrangement provides initial coin return control and routing of 00+, 00-, 0+, 0-, 1+, 01+ or 011+ prefixed originating operator assisted coin and non-coin calls requiring operator assistance to the customer's premises. Because operator assisted coin and non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing option.

This arrangement is normally ordered by the customer in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the customer's operator services systems, rather than in the customer's manual cord boards. When so equipped, the ANI optional features provide the forwarding of information digits which identify that the call has originated from a hotel or motel, and whether room number identification is required, or that special screening is required, e.g., for coinless pay telephones, dormitory or inmate stations, or other screening arrangements agreed to between the customer and the Company.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES****6.3.2 TRANSPORT TERMINATION OPTIONAL FEATURES AND BSES (Cont'd)****B. Operator Trunk - Full Feature**

This option provides the operator functions available in the end office to the customer's operator. These functions are (1), Operator Released; (2), Operator Attached; (3), Coin Collect; (4), Coin Return and (5), Ringback. It is available with CST3 and Feature Group D and is provided as a trunk type of Transport Termination. This option is not available with SS7 out of band signaling.

6.3.3 LINE TERMINATION OPTIONAL FEATURES AND BSES

SEE 6.8 FOLLOWING, FOR SERVICE AVAILABILITY IN EACH STATE.

A. Answer Supervision for Use with WATS Access Service

WATS Access Service, as described in 6.3.1.Q., preceding, may be ordered with Answer Supervision for originating Access Service. When the terminating end user answers, this option will provide a signal to the originating end user, provided that the customer has passed Answer Supervision to the Company. The exact timing of Answer Supervision is dependent upon the customer. Answer Supervision will be provided on an effective two-wire or effective four-wire transmission path, as available. Such transmission path will be associated with a trunk side arrangement at a suitably equipped WATS Serving Office, with loop-reverse battery as delineated in Technical Reference GR-334-CORE.

The Answer Supervision option is provided with Dial-Tone that can be used with Dial-Pulse (DP), or Dual-Tone Multifrequency (DTMF), or Multifrequency (MF) Signaling, where provided.

This option is available in suitably equipped Company WATS Serving Offices and is available only with CTS1, CST2, CST3, Feature Groups B, C and D.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

**6.3 COMMON SWITCHING, TRANSPORT TERMINATION AND LINE TERMINATION
OPTIONAL FEATURES AND BSES**

6.3.3 LINE TERMINATION OPTIONAL FEATURES AND BSES (Cont'd)

B. Answer Supervision - Lineside (BSE)

This option provides the capability to deliver "off-hook" supervisory signals from the terminating central office switch to a lineside interface at the originating central office switch. These signals indicate when the called station has answered an incoming call. Answer Supervision will only be provided where technically feasible with CSL and FGA.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.4 TECHNICAL SPECIFICATIONS**

Each Switched Access Service transmission path is provided with standard transmission parameter limits. The standard for a particular transmission path is dependent on the Switched Access Service, Interface Group and whether the service is directly routed to an end office or routed to the access tandem or a customer-provided tandem utilizing tandem switching functions. The available transmission parameter limits are set forth in 6.4.1, following. Data transmission parameter limits are also provided with each Switched Access Service transmission path. The Company will, upon notification by the customer that the data transmission parameter limits set forth in 6.4.2.A. or 6.4.2.B., following, are not being met, conduct tests independently or in cooperation with the customer, and take any necessary action to ensure that the data parameters are met.

The Company will maintain existing transmission parameter limits on functioning service configurations installed prior to the effective date of this Tariff except that service configurations having performance specifications exceeding the standards listed in this provision will be maintained at performance levels specified in this Tariff.

The transmission parameter limits contained in this section are Immediate Action Limits (IAL). Acceptance Limits (AL) are set forth in Technical Reference GR-334-CORE. This technical reference also provides the basis for determining Switched Access Service maintenance limits.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.4 TECHNICAL SPECIFICATIONS (Cont'd)

Transmission specifications for SS7 out of band signaling are delineated in Technical References GR-394-CORE, GR-905-CORE and in Qwest Corporation Technical PUB 77342.

Transmission specifications and error performance parameters for DS1 level digital transmission on CST3 or FGD service equipped with Clear Channel Capability are delineated in Technical Reference GR-334-CORE.

When Switched Access CST3 or FGD Service is provided via a customer-provided tandem premises, the technical transmission specifications for the customer-provided tandem must conform with the technical specifications established for Company access tandem switches. These specifications are described in Technical Reference FR-64 and GR-334-CORE. For CST3 or FGD trunks with tandem signaling information, the transmission parameter limits and interface combinations are delineated in Technical Reference GR-334-CORE.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.4 TECHNICAL SPECIFICATIONS (Cont'd)

6.4.1 STANDARD TRANSMISSION PARAMETER LIMITS

Following are descriptions of the standard transmission parameter limits available with Switched Access Services. Specific applications for Switched Access Services and Interface Groups with which the standard transmission parameter limits are provided are set forth in 6.2, preceding.

A. Transmission Type A1 Performance

Transmission Type A1 performance is provided with the following IAL for CST3 or FGD Service:

1. Loss Deviation

The maximum Loss Deviation of the 1004 Hz loss relative to the Expected Measured Loss (EML) at 1004 Hz (dB) is 2.0 dB.

2. Attenuation Distortion

The maximum Attenuation Distortion in the 404 to 2804 Hz frequency band relative to the loss at 1004 Hz is -1.5dB to + 3.5 dB.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.4 TECHNICAL SPECIFICATIONS****6.4.1 STANDARD TRANSMISSION PARAMETER LIMITS****A. Transmission Type A1 Performance (Cont'd)****3. C-Message Noise**

The maximum C-Message Noise for the transmission path at the IAL miles listed is less than or equal to:

IAL MILEAGE LIMITS	C-MESSAGE NOISE
Less than 50	33 dBrc0
51 to 100	35 dBrc0
101 to 200	37 dBrc0
201 to 400	40 dBrc0
401 to 1000	42 dBrc0

4. C-Notched Noise

The maximum C-Notched Noise, measured with -16 dBm0 holding tone applied, is less than or equal to 45 dBrc0.

5. Echo Control

Echo Control, identified as Equal Level Echo Path Loss, and expressed as Echo Return Loss (ERL) and Singing Return Loss (SRL), is equal to or greater than the following:

MEASURED AT THE POT	ERL	SRL
• POT to End Office Direct	N/A	N/A
• POT to Access Tandem	25 dB	18 dB
• POT to End Office via Access Tandem	16 dB	11 dB

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

4. C-Notched Noise

The maximum C-Notched Noise, measured with -16 dBm0 holding tone applied, is less than or equal to 47 dBrc0.

5. Echo Control

Echo Control is specified in dB as impedance balance at 4-wire interfaces for CSL or FGA Service. Echo Control is expressed as Echo Return Loss (ERL) and Singing Return Loss (SRL) and is measured at the POT to First Point of Switching (FPOS). Both the low-band and high-band tests must meet the SRL limits specified. The ERL and SRL are greater than or equal to the following:

MEASURED AT THE POT	ERL	SRL
• POT to FPOS 4-wire transmission	16 dB	11 dB

5. Echo Control

Echo Control, for Transmission Type C performance, is measured at the POT to the first point of switching (FPOS). The Immediate Action Limits expressed as Echo Return Loss (ERL) and Singing Return Loss (SRL) are not specified.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.4 TECHNICAL SPECIFICATIONS

6.4.2 VOICE BAND DATA TRANSMISSION PARAMETER LIMITS

Voice band data transmission parameter limits type DA1, DB and DB1 are specified as Immediate Action Limits, Restoral Limits and Service Affecting Limits. Voice band data parameters apply from the POT to the first point of switching for CSL, CST1, FGA or FGB and to each segment between the POT and the EO for CST2, CST3, FGC or FGD service. Specific application for Switched Access Services and Interface Groups with which the voice band data transmission parameter limits are provided are set forth in 6.2, preceding.

The Company will work cooperatively with the customer to achieve the voice band data parameter transmission limits for the transmission path(s) as delineated in Technical Reference GR-334-CORE.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.5 OBLIGATIONS OF THE COMPANY**

In addition to the obligations of the Company set forth in Section 2, preceding, the Company has certain other obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

6.5.1 NETWORK MANAGEMENT

The Company will administer its network to ensure the provision of acceptable service levels to all telecommunications users of the Company's network services.

Generally, service levels are considered acceptable only when both end users and customers are able to establish connections with little or no delay encountered within the Company network. The Company maintains the right to apply protective controls, i.e., those actions, such as call gapping, which selectively cancel the completion of traffic, over any traffic carried over its network, including that associated with a customer's Switched Access Service. Generally, such protective measures would only be taken as a result of occurrences such as failure or overload of Company or customer facilities, natural disasters, mass calling or national security demands. In the event that the protective controls applied by the Company result in the complete loss of service by the customer, the customer will be granted a Credit Allowance for Service Interruption as set forth in 2.4.4.B., preceding.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.5 OBLIGATIONS OF THE COMPANY (Cont'd)****6.5.2 DESIGN AND TRAFFIC ROUTING OF SWITCHED ACCESS SERVICE**

When ordering Switched Access Service, the customer shall specify on the order for service the Entrance Facility, direct routing or tandem routing, the number of lines or trunks, and the desired directionality (i.e., one-way, two-way). When the customer orders facilities, routing, directionality or optional features different from that determined to be available by the Company, the Company will work cooperatively with the customer in determining an acceptable configuration based on available facilities, equipment and Company routing plans. Rates and charges for Switched Transport, as set forth in 6.8, following, will be applied based on the transport provisioned at the time the order is completed. For example, if direct routing to the end office is requested but facilities are not available and the customer accepts tandem routing, the rates for the tandem routing configuration shall apply until such time that direct routing to the end office is provided.

6.5.3 DS1 RECORDS ASSIGNMENT

When the customer initially orders a DS3 EF with DS3 DTT facilities to a Company Hub, access tandem or end office, the Company will provide to the customer, the appropriate DS1 facility record necessary for the customer to identify circuit facility assignment (CFA). On subsequent orders utilizing existing DS3 Entrance Facilities or DS3 DTT facilities, the Company will assign the DS1 facility to the DS3 Entrance Facility or DS3 DTT facility as directed by the customer's order.

6.5.4 MULTIPLEXING

The Company will provide multiplexing equipment at a location determined by the Company as part of its overall network design when the conditions exist as set forth in 6.1.2, preceding.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.5 OBLIGATIONS OF THE COMPANY (Cont'd)

6.5.5 PROVISION OF SERVICE PERFORMANCE DATA

Subject to availability, end-to-end service performance data available to the Company through its own service evaluation routines, may also be made available to the customer based on previously arranged intervals and format. These data provide information on overall end-to-end call completion and non-completion performance, e.g., customer equipment blockage, failure results and transmission performance. These data do not include service performance data which are provided under other tariff sections, e.g., testing service results. If data are to be provided in other than paper format, the charges for such exchange will be determined on an individual case basis.

6.5.6 TRUNK GROUP MEASUREMENT REPORTS

Subject to availability, the Company will make available trunk group data, in the form of usage in CCS, peg count and overflow, to the customer based on previously agreed to intervals. Trunk group measurement reports will be available for Feature Group Switched Access Service, bundled *DID* Switched Access Service and WATS Access Service at no charge to the customer.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.5 OBLIGATIONS OF THE COMPANY (Cont'd)

6.5.7 DETERMINATION OF NUMBER OF TRANSMISSION PATHS

DS1 and DS3 Entrance Facilities and DTT facilities requested by the customer are solely transport facilities capable of 24 and 672 channels, respectively, and do not reflect the actual switching capacity in the SWC, end office, access tandem, or Company Hub. The actual number of transmission paths provided will be based on the customer's line or trunk request. Subsequent assignment will be based on switching equipment available.

For Lineside or Trunkside Switched Access Service which is ordered on a per-line or per-trunk basis, the customer specifies the number of transmission paths in the order for service.

6.5.8 DETERMINATION OF NUMBER OF END OFFICE TRANSPORT TERMINATIONS

For analog entry switches, a termination will be provided for each Feature Group or BSA line or trunk requested. For digital entry switches, an equivalent termination will be provided for each Feature Group or BSA line or trunk requested.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.5 OBLIGATIONS OF THE COMPANY (Cont'd)

6.5.9 DESIGN BLOCKING PROBABILITY

The Company will design and monitor the facilities used in the provision of Switched Access Services to meet the blocking probability criteria as set forth in A. through D., following.

- A. For CSL, CST1, Feature Group A and B and *DID* Switched Access Services, no design blocking criteria apply.
- B. For CST2 and Feature Group C, the design blocking objective will be no greater than one percent (.01) between the point of termination at the customer's premises and the first point of switching when traffic is directly routed without an alternate route. Standard traffic engineering methods will be used by the Company to determine the number of transmission paths required to achieve this level of blocking.
- C. For CST3 and Feature Group D, the design blocking objective for the final group will be no greater than one percent (.01) between the point of termination at the customer's premises and the end office switch, whether the traffic is directly routed without an alternate route or routed via an access tandem. Standard traffic engineering methods as set forth in reference document Special Report SR-TAP-000191 Trunk Traffic Engineering Concepts and Applications will be used by the Company to determine the number of transmission paths required to achieve this level of blocking.
- D. The design blocking criteria for 500, 800 DB Access Service and 900 Access Service will be equivalent to the design blocking criteria of the basic serving arrangement that they are provisioned as, except under media stimulation when protective controls may be utilized to ensure the provisioning of acceptable service levels to all telecommunication users of the Company's network services.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.5 OBLIGATIONS OF THE COMPANY****6.5.9 DESIGN BLOCKING PROBABILITY (Cont'd)**

- E. The Company will perform routine measurement functions for the trunks ordered in accordance with Company design blocking criteria to assure that an adequate number of trunks are in service. The Company will recommend that additional trunks be ordered by the customer when additional trunks are required to reduce the measured blocking to the designed blocking level. Where design blocking criteria apply, the design blocking objective is assumed to have been met if the routine measurements show that the measured blocking does not exceed the thresholds listed in the following tables.
1. For transmission paths carrying only first routed traffic directly between an end office and a customer's premises without an alternate route, and for paths carrying only overflow traffic, the measured blocking thresholds are as follows:

NUMBER OF TRUNKS PER TRUNK GROUP	MEASURED BLOCKING THRESHOLDS IN THE TIME-CONSISTENT BUSY HOUR FOR THE NUMBER OF MEASUREMENTS PER TRUNK GROUP			
	15-20 MEASURE- MENTS	11-14 MEASURE- MENTS	7-10 MEASURE- MENTS	3-6 MEASURE- MENTS
2	.070	.080	.090	.140
3	.050	.060	.070	.090
4	.050	.060	.070	.080
5-6	.040	.050	.060	.070
7 or more	.030	.035	.040	.060

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.5 OBLIGATIONS OF THE COMPANY

6.5.9 DESIGN BLOCKING PROBABILITY

E. (Cont'd)

2. For transmission paths carrying first-routed traffic between an end office and a customer's premises via an access tandem, the measured blocking thresholds are as follows:

NUMBER OF TRANSMISSION PATHS PER TRUNK GROUP	MEASURED BLOCKING THRESHOLDS IN THE TIME CONSISTENT BUSY HOUR FOR THE NUMBER OF MEASUREMENTS PER TRUNK GROUP			
	15-20 MEASURE- MENTS	11-14 MEASURE- MENTS	7-10 MEASURE- MENTS	3-6 MEASURE- MENTS
2	.045	.055	.060	.095
3	.035	.040	.045	.060
4	.035	.040	.045	.055
5-6	.025	.035	.040	.045
7 or more	.020	.025	.030	.040

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.5 OBLIGATIONS OF THE COMPANY (Cont'd)

6.5.10 END USER LINE AND USAGE INFORMATION DATA

A. General

The Company will provide to customers, upon request, historical and projected information pertaining to the number of end user lines and average use per line. Such historical and projected information shall be limited to that information which the Company uses in the course of performing its normal business operations. Additionally, the Company will make updated information available on a semi-annual basis.

B. Information Content and Format

The historical and projected data will be provided on a per end office basis and will consist of the following information:

- Number of residential lines
- Number of business lines
- Average use per line

Unless otherwise requested, the data will be provided in machine-readable format.

C. Availability of Data

The Company will update the data semi-annually and provide the data to the requesting IC within 30 days of the receipt of the request.

D. Charges for Data

The charge to the customer for such data will be developed on an individual case basis and will include only those incremental costs incurred by the Company in responding to the individual data request. Incremental costs include, but are not limited to, costs associated with the provision of data in a non-standard format as well as costs associated with responding to other individualized treatment requested by the customer.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.6 OBLIGATIONS OF THE CUSTOMER

In addition to the obligations of the customer set forth in Section 2, preceding, the customer has certain specific obligations pertaining to the use of Switched Access Service. These obligations are as follows:

6.6.1 ORDERING REQUIREMENTS

When ordering Switched Access Service, the customer shall specify on the order for service, the type and number of Entrance Facilities to terminate at the customer's SWC, the desired interoffice transport, direct or tandem routing, the number of lines and/or trunks to be provisioned at an end office or access tandem and the desired directionality.

6.6.2 REPORT REQUIREMENTS

Customers are responsible for providing the following reports to the Company, when applicable.

A. Jurisdictional Reports

When a customer orders Switched Access Service for both interstate and intrastate use, the customer is responsible for providing reports as set forth in 2.3.10, preceding. Charges will be apportioned in accordance with those reports. The method to be used for determining the interstate charges is set forth in 2.3.12, preceding.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.6 OBLIGATIONS OF THE CUSTOMER

6.6.2 REPORT REQUIREMENTS (Cont'd)

B. Code Screening Reports

When a customer orders Service Class Routing or trunk access limitation arrangements, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

C. 900 NXX Code Reports

When ordering 900 Access Service, the customer must report the appropriate NXX code(s) to be instituted in each Company office at which the customer identification function is performed. The report must be updated by the customer each time a change is scheduled to occur (i.e., when a new code is to be added or an existing code is to be deleted). Such updated reports shall be provided at least 60 calendar days prior to the effective date of the change in order to allow the Company sufficient time to implement the change.

D. Multiple POTs Tandem Sectorization Reports

When ordering MPTS the customer must report the customer designated POT for all subtending end offices served by an access tandem. The report shall be provided at the same time the Access Order is placed.

E. 5YY NXX Code Reports

When ordering 500 Access Service, the customer must report the appropriate NXX code(s) to be instituted in each required point of six-digit translation at which the carrier identification function is performed. The report must be updated by the customer each time a change is scheduled to occur (i.e., when a new NXX code is to be added or an existing NXX code is to be deleted). Such updated reports shall be provided at least 45 calendar days prior to the effective date of the change in order to allow the Company sufficient time to implement the change.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.6 OBLIGATIONS OF THE CUSTOMER (Cont'd)

6.6.3 SUPERVISORY SIGNALING

The customer's facilities shall provide the necessary off-hook and on-hook answer and disconnect supervision.

6.6.4 TRUNK GROUP MEASUREMENTS REPORTS

With the agreement of the customer, trunk group data in the form of usage in hundred call seconds (CCS), peg count and overflow for its end of all access trunk groups, where technologically feasible, will be made available to the Company. These data will be used to monitor trunk group utilization and service performance and will be based on previously arranged intervals and format.

6.6.5 DESIGN OF SWITCHED ACCESS SERVICES

When a customer orders Switched Access Service on a per-facility and/or per-trunk basis, it is the customer's responsibility to assure that sufficient access services have been ordered to handle its traffic.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

This section contains the specific regulations governing the rates and charges that apply for Switched Access Service.

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

There are three types of rates and charges that apply to Switched Access Service. These are monthly recurring rates, usage rates and nonrecurring charges. These rates and charges are applied differently to the various rate elements as set forth in C. and D., following.

A. Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a specific rate element is provided. For billing purposes, each month is considered to have 30 days.

B. Usage Rates

Usage rates are rates that apply only when a specific rate element is used. These are applied on a per-access minute, a per-call or per-query basis. Usage rates are accumulated over a monthly period.

C. Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for specific work activity (i.e., installation or change to an existing service). The types of nonrecurring charges that apply for Switched Access Service are: installation of service, installation of optional features or BSEs and service rearrangements. These charges are set forth in 6.8, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****C. Nonrecurring Charges (Cont'd)****1. Installation of Service**

Nonrecurring charges apply for the installation of the Entrance Facility and for the installation of the individual Feature Group or BSA line or trunk.

- a. An Entrance Facility nonrecurring charge is assessed per point of termination (i.e., Voice Grade, DS1 or DS3), per customer designated premises, per Access Order for every new Entrance Facility installed. When the EF is existing, and the customer orders additional Switched Access services to connect to the existing EF, nonrecurring charges will not apply for the EF.
- b. For Switched Access Service that is ordered on a per-line or -trunk basis for the Feature Group or BSA, the nonrecurring charge is applied per line or per trunk. Nonrecurring charges are assessed dependent on the Interface Group ordered for terminating Switched Transport at the customer's point of termination. Each Interface Group provides a specified premises interface as set forth in 6.1.2, preceding. Each Interface Group (i.e., 1, 2, 6, 9) is assigned to an Interface Group Category for the application of nonrecurring charges based on the "first" and "each additional" line or trunk application per Access Order. If a customer orders multiple lines or trunks on the same Access Order, the first line or trunk is assessed the "first" installation charge and each additional line or trunk is assessed the "each additional" installation charge per Interface Group Category (i.e., 1 and 2, 6 or 9), per Access Order. The per-line or per-trunk nonrecurring charge is in addition to the Entrance Facility charge, if applicable.
- c. Nonrecurring charges for FGB, FGD, CST1 or CST3 Switched Access Service include one Carrier Identification Code (CIC) on an initial Access Order. The CIC is a uniform numeric code that identifies the customer associated with the Switched Access Service. The customer of the initial CIC is the customer of record for the Switched Access Service. When a customer requests two or more CICs on an initial Access Order, each additional CIC (i.e., two or more) is considered to be a service rearrangement as set forth in j., following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

C. Nonrecurring Charges (Cont'd)

2. Installation of Optional Features and BSEs

Nonrecurring charges apply for the installation of some of the optional features and BSEs available with Switched Access Service. The charges may apply whether the feature is installed coincident with the initial installation of service or at any time subsequent to the initial installation of service. In addition, a BSE Access Service Order charge may apply when a BSE is ordered subsequent to the initial installation of service. Specific rate applications are as set forth in 6.7.1, following.

3. Service Rearrangements

Service rearrangements are changes to existing services installed which do not result in either a change in the minimum period requirements as set forth in 5.2.5, preceding, or a change in the physical location of the point of termination at a customer's premises or a customer's end user's premises. Changes which result in the establishment of new minimum period obligations are treated as disconnects and starts. Changes in the physical location of the point of termination are treated as moves and are described and charged for as set forth in 6.7.6, following.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

C. Nonrecurring Charges

3. Service Rearrangements (Cont'd)

The charge to the customer for the service rearrangement is dependent on whether the change is administrative only in nature or involves an actual technical and/or physical change to the service.

Administrative changes will be made without charge(s) to the customer. Administrative changes are as follows:

- Change of customer name (i.e., the customer of record does not change but rather the customer of record changes its name - e.g., XYZ Telephone Company to XYZ Communications)
- Change of customer name as the result of a transfer of use of services as set forth in 2.1.2, preceding
- Change of customer or customer's end users premises address when the change of address is not a result of a physical relocation of equipment
- Change in billing data (name, address, or contact name or telephone number)
- Change of agency authorization
- Change of customer circuit identification
- Change of billing account number
- Change of customer test line number
- Change of customer or customer's end users contact name or telephone number
- Change of jurisdiction

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

C. Nonrecurring Charges

3. Service Rearrangements (Cont'd)

All other service rearrangements will be charged as set forth following:

- a. If the change involves the addition of or a modification to an optional feature which has a separate nonrecurring charge, that nonrecurring charge will apply.
- b. If the change involves the addition of or a modification to a BSE which has a separate nonrecurring charge, that nonrecurring charge will apply. In addition, a BSE Access Service Order charge, per order, will apply when a BSE is ordered on a subsequent basis without line or trunk activity on the same order, except as set forth in 6.7.1.L.5., following. The BSE Access Service Order charge will not apply when a BSE and an optional feature are ordered on the same order.
- c. If, due to technical limitations of the Company, a customer could not combine its 500 Access Service, 800 DB Access Service and/or 900 Access Service traffic with its other Trunkside Switched Access Services, no charge shall apply to combine these trunk groups when it becomes technically possible.
- d. If, due to an office replacement, a customer requests conversion from one-way to two-way trunks, and the request is made six months in advance of the office replacement due date, the nonrecurring charges will not apply.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****C. Nonrecurring Charges****3. Service Rearrangements (Cont'd)**

- e. For all other changes, including the addition of, or modifications to optional features without separate nonrecurring charges, a charge equal to one-half the Switched Transport per-line or per-trunk nonrecurring (i.e., installation) charge will apply. This one-half nonrecurring charge is assessed the "first" installation charge for the first line or trunk and each additional line or trunk is assessed the "each additional" installation charge per appropriate Interface Group category, per Access Order. If two or more optional features and changes are ordered on the same Access Order, the optional feature or change requiring the lowest level of work activity will apply. If a feature is not required on each line or trunk, but rather for an entire hunt or trunk group, end office or access tandem switch, only one such charge will apply (i.e., it will not apply per line or trunk). This one-half nonrecurring charge is assessed the "first" installation charge for the first hunt group, trunk group, end office or access tandem switch and each additional hunt group, trunk group, end office or access tandem switch is assessed the "each additional" installation charge per appropriate Interface Group category, per Access Order. Service Rearrangement terms and conditions associated with WATS service optional features, additions and changes are set forth in f., following. Nonrecurring charges for service rearrangements are specified in 6.8, following.
- f. For optional features, additions and changes associated with WATS service, the one-half nonrecurring charge is assessed the "first" installation charge for the first line or trunk and each additional line or trunk is assessed the "each additional" installation charge for Interface Group 6, per Access Order. This charge applies for all Network Channel Interface (NCI) codes associated with a WATS access line. If two or more optional features and changes are ordered on the same Access Order, the optional feature or change requiring the lowest level of work activity will apply. If a feature is not required on each line but rather for an entire hunt group, only one such charge will apply (i.e., it will not apply per line). This one-half nonrecurring charge is assessed the "first" installation charge for the first hunt group and each additional hunt group is assessed the "each additional" installation charge per Interface Group 6, per Access Order. Nonrecurring charges for service rearrangements are specified in 6.8, following.
- g. Service rearrangement charges apply when the customer rearranges 500 Access Service from direct end office routing to tandem routing or tandem routing to direct end office routing. These service rearrangement charges, as set forth in e., preceding, apply even if the customer requests a rearrangement due to the Company performing the screening and routing function at a different location.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

C. Nonrecurring Charges

3. Service Rearrangements (Cont'd)

- h. Service rearrangement charges are applicable, as set forth in e., preceding, when Alternate Traffic Routing, as described in 6.3.1, preceding, is added, changed or removed from an existing trunk group. Service rearrangement charges are not applicable when the following Alternate Traffic Routing changes are requested:
- renaming a high usage group to be an intermediate high usage group and the delivery of the originating traffic (i.e., the overflowing traffic) is not changing,
 - renaming an intermediate high usage group to be a high usage group and the delivery of the originating traffic (i.e., the overflowing traffic) is not changing, or
 - renaming a trunk group (i.e., a direct final) to be an alternate final trunk group.
- i. A request to change CST3 or FGD Service from a direct route or a tandem route to a direct route equipped with TSI (where the Company End Office subtends a customer-provided tandem) is a discontinuance of the existing service and an installation of a new service. All associated nonrecurring charges apply for the new service. Minimum period requirements for Switched Access Service apply as set forth in 5.2.5, preceding.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****C. Nonrecurring Charges****3. Service Rearrangements (Cont'd)**

- j. Nonrecurring charges for additional (i.e., two or more) CICs are determined based on whether the FGB, FGD, CST1 or CST3 trunk(s) or trunk group(s) are new or existing, the Interface Group Category rate and the level of work activity (i.e, trunk, trunk group, end office and/or tandem).

When the trunk or trunk group is new, one CIC is included in the nonrecurring charges for the initial Access Order. Each additional CIC requested on the same Access Order is assessed one-half the "each additional" installation charge assessed by Interface Group Category. In addition, the charge is based on the lowest level of work, per Access Order, per LATA. The additional (i.e., two or more) CIC service rearrangement charge is in addition to Installation Charge(s) for the trunk(s).

When the FGB, FGD, CST1 or CST3 trunk group is existing service and the customer is requesting additional CICs on an existing tandem-routed trunk group, the customer is charged one-half the "first" installation charge at the tandem and one-half the "each additional" installation charge at each subtending end office for the "first additional" CIC on the Access Order, assessed by Interface Group Category. Each "additional" CIC after the "first additional" CIC on the same Access Order is charged one-half the "each additional" installation charge at the tandem and one-half the "each additional" installation charge per subtending end office, per LATA, based on the Interface Group Category.

When the FGB, FGD, CST1 or CST3 trunk group is existing service and the customer is requesting additional CICs on a direct-routed trunk group, the customer is charged one-half the "first" installation charge for the "first additional" CIC and one-half the "each additional" installation charge for each "additional" CIC after the "first additional" CIC on the same Access Order, per end office, per LATA, based on the Interface Group Category.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

C. Nonrecurring Charges

3. Service Rearrangements

j. (Cont'd)

When the FGB, FGD, CST1 or CST3 trunk or trunk group is new or existing and the customer is requesting CICs for both a direct and tandem route, the Company will exclude the direct-routed end offices from the end office count when calculating the tandem-routed trunk group service rearrangement charges when the following conditions are met: 1) the CICs requested are the same on each order, 2) the Access Orders are received at the same time 3) the Access Orders are due on the same date and 4) the LATA is the same.

- k. Service rearrangement charges are applicable, as set forth in e., preceding when the customer has Signaling System Seven (SS7) Out of Band Signaling and chooses to change the existing point code on the existing trunk(s). If the point code in the STP is changed for the associated CCSAC link(s), a CCSAC Option Activation charge, as set forth in 20.1.3, following, also applies.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****C. Nonrecurring Charges (Cont'd)****4. Conversion of Existing Feature Groups to Unbundled BSAs**

Nonrecurring charges will not apply to convert existing Feature Groups to unbundled BSA equivalents if the change is administrative in nature. If the customer requests a change in the technical characteristics of the existing Feature Group service, nonrecurring charges will apply as set forth in 1., 2. and 3., preceding.

5. Rearrangement to SS7 Out of Band Signaling

Rearrangement of existing CST3 or FGD Multifrequency (MF) signaling or upgrades in Lineside or Trunkside Switched Access Service to CST3 or FGD trunk groups equipped with SS7 out of band signaling will be performed at Company tandems and end offices designated as having SS7 capabilities. SS7 Out of Band Signaling Rearrangement Charges will apply when the following conditions are met:

- The same customer premises, quantity of lines or trunks, routing, traffic type, Interface Group category, optional features and/or BSEs are maintained. Exceptions to this condition are set forth in 6.7.1.K., 6.7.1.O. and 6.7.5, following.
- Rearrangement from a one-way or two-way transmission when the signaling is changing to SS7 out of band signaling will be by trunk group(s) ordered and received at the same time.
- Multiple lines or trunk groups may be combined into a single CST3 or FGD trunk group with SS7 out of band signaling when all trunks within the group are traffic engineered as a unit and all the communications paths within the group are interchangeable.
- The disconnect date and connect date on the Access Orders must be the same date when rearranging to a CST3 or FGD trunk group with SS7 out of band signaling. Exceptions to this condition are set forth in 6.7.5.A., following.
- Upgrades from Lineside or Trunkside service types to FGD Switched Access Service with SS7 out of band signaling are available when the above conditions and conditions in 6.7.5, following are met.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

C. Nonrecurring Charges

5. Rearrangement to SS7 Out of Band Signaling (Cont'd)

When Switched Access Service is rearranged to CST 3 or FGD with SS7 out of band signaling, the customer will be charged a Service Order Rearrangement charge and Trunk Rearrangement charges. The Service Order Rearrangement charge is assessed per access order, per Interface Group. The SS7 Trunk Rearrangement charge is applied per trunk in each SS7 out of band signaling trunk group. The first trunk in the SS7 out of band signaling trunk group will be charged the "first trunk" charge and each additional trunk in the same group will be charged the "each additional" trunk charge. Service Order and Trunk Rearrangement charges are sensitive to whether the transmission (one-way or two-way) is changing. These charges are set forth in 6.8., following.

The description and application of rates and charges when rearranging Switched Data Service or CST3 or FGD service to SS7 out of band signaling and Clear Channel Capability are set forth in 6.7.1.K. and 6.7.1.O., following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****C. Nonrecurring Charges (Cont'd)**

6. Rearrangement of CST1, FGB, CST3, or FGD Trunks from a Company Access Tandem Route to a Direct Route.

When the customer requests the rearrangement of existing CST1, FGB, CST3 or FGD trunks (excludes 500 Access Service) from a Company access tandem route to an end office direct route without the TSI option, charges are determined as set forth following.

When the customer has the DTT rating option between the SWC of the customer's premises and the access tandem and is requesting DTT to an end office (see exception described in 8., following), a rearrangement charge, as set forth in 6.8.1.E.5., following, is assessed if the following conditions are met. If the conditions are not met, nonrecurring charges as described in 1., 2., or 3., preceding, may apply as determined by the customer's access service request.

- The rearrangement charge is assessed in association with the Interface Group, 1, 2, 6 or 9, and is applied per trunk in each direct routed access trunk group. The first trunk in the direct routed access trunk group is charged the "first trunk" charge and each additional trunk is charged the "each additional" trunk charge.
- The same customer premises, service type and Interface Group category are maintained with the exception of a change in Interface Group category and service type as set forth in 6.7.4 and 6.7.5, following. If the quantity of trunks changing to direct routed access exceeds the number of trunks disconnecting from the Company access tandem, full nonrecurring installation charges will apply for the additional trunks.
- Customers may specify a change in traffic type and direction (i.e., one-way to two-way) at the time the order is received.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

C. Nonrecurring Charges

6. (Cont'd)

- Customers may specify a change in optional features (except Switched Transport multiplexing) and/or BSEs at the time the order is received. If the optional feature and/or BSE has a separate nonrecurring charge, that nonrecurring charge will apply in addition to the rearrangement charge. Requests for a rearrangement from MF to SS7 out of band signaling must be received on a separate access order.
- All trunks will be rearranged into 24 trunks within a direct routed access trunk group.
- The order to disconnect the tandem route and to connect the end office DTT shall be placed at the same time. The disconnect date of the tandem route order may be negotiated with the Company not to exceed 30 days from the connect date of the end office DTT order with the exception of a change in service type as set forth in 6.7.5, following.
- Customer specified rearrangement requests will be cooperatively negotiated with the customer and are subject to the availability of Company switching equipment and other existing facilities.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****C. Nonrecurring Charges (Cont'd)****7. Hubbing**

When a customer meets the hubbing conditions, as set forth in a., following, and is rearranging their facilities, as set forth in b., following, a rollover charge shall apply to the lower speed facility as specified in 6.8, following. Multiplexing rates and charges apply as set forth in 6.1.2, preceding.

a. Hubbing Conditions

- The EF and/or DTT facilities are provided to the same customer location as the original facilities, and
- The DTT facilities are currently routed to an access tandem or Company hub, or directly routed to an end office, and
- The access tandem and end office locations are not changing.

b. Hubbing Service Rearrangements

- The DTT facilities are rerouted through a Company hub to the access tandem, or from one Company hub to a different Company hub to the access tandem, or through a Company hub to an end office, or from one Company hub to a different Company hub to an end office, and
- A lower speed Entrance Facility or DTT facility is to be placed on a higher speed facility, or
- Moved from one higher speed facility to a different higher speed facility.

If an order is required to rearrange the lines and/or trunks associated with a hubbing rearrangement, service rearrangement charges apply as set forth in 6.7.1.C.3, preceding.

If an order is required to change the interface group category on the lines and/or trunks associated with a hubbing rearrangement, then the terms and conditions as set forth in 6.7.4, following, apply in addition to the charge specified for the hubbing rearrangement.

If an order is required to change the Switched Access Service type on the lines and/or trunks associated with a hubbing rearrangement, then the terms and conditions as set forth in 6.7.5, following, apply in addition to the charge specified for the hubbing rearrangement.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****C. Nonrecurring Charges (Cont'd)****8. Rearrangement of 800 DB Access Service from Tandem Routing to Direct Routing**

When the customer requests the rearrangement of 800 DB Access Service from tandem routing to direct routing, no charge shall apply for the customer requested rearrangement as long as the following conditions are met:

- The same customer premises, service type and Interface Group category are maintained with the exception of a change in Interface Group category and service type as set forth in 6.7.4 and 6.7.5, following.
- The end office must subtend the tandem which service is being rearranged from.
- The customer must disconnect one trunk at the tandem for each rerouted end office trunk installed. Trunk rearrangements for more than one-for-one must be determined on an equivalent basis substantiated by industry accepted engineering standards and mutually agreed upon by the Company and the customer.
- The customer may specify a change in traffic type and direction (i.e., one-way to two-way) at the time the order is received.
- The customer may specify a change in optional features (except Switched Transport multiplexing) and/or BSEs at the time the order is received. If the optional feature and/or BSE has a separate nonrecurring charge, that nonrecurring charge shall apply. Requests for a rearrangement from MF to SS7 out of band signaling must be received on a separate access order.
- The Company must receive an ASR to connect 800 DB Access Service at the end office within six months of the end office becoming SSP capable. The customer must place the order to disconnect from the tandem at the same time the order is placed to connect at the end office. The disconnect date may be negotiated with the Company not to exceed 90 days from the connect date.
- Customer specified rearrangement requests will be cooperatively negotiated with the customer and are subject to the availability of Company switching equipment and other existing facilities.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****C. Nonrecurring Charges (Cont'd)****9. Rollover**

When a customer meets the rollover conditions as set forth in (a), following, and is rearranging their facilities, as set forth in (b), following, a rollover charge shall apply to the lower speed facility as specified in 6.8, following. When the requested change does not meet the rollover conditions, then the appropriate nonrecurring charge applies as set forth in this section.

a. Rollover Conditions

- The EF and/or DTT facilities are provided between the same customer locations as the original facilities, and
- all rollovers are performed at the same Company central office location, and
- all facilities involved in the rollover are provided by the Company.

b. Rollover Service Rearrangements

- A lower speed Entrance Facility or DTT facility is to be placed on a higher speed facility, or
- moved from one higher speed facility to a different higher speed facility, or
- moved to a different channel on the same multiplexed facility.

If an order is required to rearrange the lines and/or trunks associated with a facility rollover, service rearrangement charges (e.g., Switched Transport per-line or per-trunk nonrecurring charges) may apply as set forth in C.3, preceding in addition to the facility rollover charges.

If an order is required to change the interface group category on the lines and/or trunks associated with a facility rollover, then the terms and conditions as set forth in 6.7.4, following, apply in addition to the facility rollover charge.

If an order is required to change the Switched Access Service type on the lines and/or trunks associated with a facility rollover, then the terms and conditions as set forth in 6.7.5, following, apply in addition to the facility rollover charge.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)

D. Application of Rates

The specific application of rates for a specific customer is dependent upon the type of service provided.

The following rules, 1. through 4., provide the basis for applying the usage rates for Local Switching, Information Surcharge, and Carrier Common Line.

1. Rates apply to all CST2, CST3, FGC and FGD access minutes, to all CSL, FGA, CST1, FGB and *DID* access minutes that originate from or terminate at end offices.

When originating CST3 or FGD is not available in an end office, and terminating CST3 or FGD service to an access tandem in a LATA is available, such terminating CST3 or FGD service may be used, at the option of the customer, to terminate CST3 or FGD calls to that end office. CST3 or FGD rates apply to all access minutes associated with such calls.

BSE rate applications are described in 3., following.

2. Where Switched Access Service is provided to a carrier in conjunction with a Commercial Mobile Radio Service provider, the Company shall apply the rates as set forth in 2.4.8, preceding.

3. BSE Recurring Rates

The recurring rates for BSEs are dependent upon the serving arrangement.

The following rules provide the basis for applying BSE rates.

- Rates apply to all BSEs provided at end offices or access tandems and to all BSEs provided to customers who furnish interstate MTS/WATS.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)

E. 800 DB Access Service

An 800 Carrier Identification Charge is assessed per call to the service provider the call is delivered to in accordance with SMS/800 information residing in the Company's SCP.

A POTS Translation Charge is assessed per call, in addition to the 800 Carrier Identification Charge, when the POTS number is delivered to the service provider instead of the 8XX number in accordance with SMS/800 information residing in the Company's SCP. The POTS Translation feature is described in 6.2.8, preceding.

A Call Handling and Destination Feature Charge is assessed to the service provider the call is intended for on a per-query basis for each 8XX query to the Company's SCP that utilizes a Call Handling and Destination feature as described in 6.2.8, preceding. The query rate is assessed for all completed queries whether or not the actual 8XX call is delivered to the service provider. A query is considered to be completed when the routing information is delivered back to the Service Switching Point.

The rates and charges are in addition to the rates and charges for the rate categories described in 6.1.2, preceding, which are applicable to all Switched Access Service. The 800 DB Access Service rates are set forth in 6.8.9, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)****F. 900 Access Service Customer Identification Charge**

A 900 Access Service Customer Identification Charge is assessed for each 900 call delivered to the customer. This charge is in addition to the rates and charges for the rate categories described in 6.1.2, preceding, which are applicable to all Switched Access Services. The per-call rate is set forth in 6.8, following.

G. 900 Access Service Nonrecurring Charge

In addition to the rates and charges for the rate categories described in 6.1.2, preceding, which are applicable to all Switched Access Services, the following charges apply to 900 Access Service:

1. There are two additional charges which apply to 1+900 Service to activate the 900 NXX code(s) for each end office. These charges are assessed on a first and subsequent NXX per access order, per screening location. The screening location, end office or tandem, is determined by where the six-digit translation of the 900 NXX portion of the dialed number is performed. These charges are set forth in 6.8, following.
2. There are two additional charges which apply to expanded 0+900 Service to activate the Expanded 900 Option. These charges are assessed per access order, per screening location, end office or tandem with NXX activity or can be ordered without NXX activity. The Expanded 900 Option is not offered without 1+900 Access Service within a LATA and is available only with CST3 or Feature Group D Service in suitably equipped Telephone Company end offices. These charges are set forth in 6.8, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)****H. Multiple POTs Tandem Sectorization [1] Nonrecurring Charge**

The nonrecurring charges for MPTS are described as follows.

The MPTS ASR charge applies when a customer is ordering MPTS without associated trunk activity on the same order. This charge applies whether the order is to initially add sectors, or make rearrangements to an existing sector(s). Trunk activity includes installing new trunks, adding additional trunks, rearranging existing trunks or removing trunks. This charge is in addition to the MPTS establishment charge (without associated trunk activity) and the MPTS rearrangement charge (without associated trunk activity).

The MPTS establishment charge (without associated trunk activity) applies when a customer orders MPTS Service without associated trunk activity on the same order. The MPTS establishment charge (with associated trunk activity) applies when a customer orders MPTS Service with associated trunk activity on the same order.

The MPTS rearrangement charge (without associated trunk activity) applies when a customer orders rearrangements to established MPTS service without associated trunk activity on the same order. The MPTS rearrangement charge (with associated trunk activity) applies when a customer orders rearrangements to established MPTS service with associated trunk activity on the same order. These charges are set forth on 6.8, following.

[1] Effective February 20, 1999, MPTS is limited to existing customers on existing MPTS trunk groups only. Customers with MPTS in service may augment existing MPTS trunk groups until the service is moved or disconnected. If the service is moved or disconnected, MPTS may not be reestablished.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)****I. Self Healing Alternate Route Protection (SHARP)**

The charges for SHARP are described as follows:

When the SHARP optional feature is ordered and installed coincident with the initial installation of the associated Switched Access Service, no nonrecurring charges apply for the SHARP option.

The SHARP installation charge applies when a customer orders SHARP subsequent to the initial installation of the associated Switched Access trunks. These charges are assessed per Interface Groups 6 and/or 9, per access order. The customer is assessed the "first" installation charge for the first trunk and each additional trunk is assessed the "each additional" installation charge for every trunk ordered with the SHARP option. These rates are as set forth in 6.8.1., following.

The removal of the SHARP optional feature will be treated as a discontinuance of the existing service and installation of a new service. All associated nonrecurring installation charges will apply for the new service. A new minimum period will be established for the new service. Minimum period requirements will not apply to monthly charges for the SHARP facility.

J. Switched Data Service (SDS)

SDS nonrecurring installation charges are assessed per Interface Group 6 or 9 per dedicated trunk provisioned as CST3 or FGD equipped with SDS. The customer is assessed the "first" installation charge for the first trunk and the "each additional" installation charge for each additional trunk installed. Switched Transport trunk nonrecurring installation of service charges do not apply. SDS is subject to all applicable CST3 and FGD recurring rates. Rates and charges for SDS are set forth in 6.8, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****J. Switched Data Service (SDS) (Cont'd)**

Any change in existing service equipped with SDS will be treated as a discontinuance of existing service and installation of new service with the exception of changing to Clear Channel Capability and SS7 out of band signaling. When Clear Channel Capability and SS7 out of band signaling are available in the same Company digital end office as SDS and the following conditions are met, the customer may discontinue SDS without disconnecting the CST3 or FGD provisioned service by ordering Clear Channel Capability and SS7 out of band signaling. The customer will be assessed the nonrecurring charges as set forth in 6.8.1.E.5.a. and 6.8.2.C.32., following.

- The customer changes from SDS provisioned on CST3 or FGD with multifrequency signaling to CST3 or FGD with SS7 out of band signaling and Clear Channel Capability with no other changes in optional features and or BSE's.
- The same customer premises, quantity of trunks, service type, direct routing, and Interface Group Category 6 or 9 are maintained.
- The traffic type on the SDS equipped CST3 or FGD service is changed to the Clear Channel Capability originating and/or terminating traffic type as set forth in 6.1.1, preceding.
- All service orders are received at the same time and the disconnect date and the connect date are the same when rearranging trunk groups from MF to SS7 out of band signaling with Clear Channel Capability.
- Multiple MF trunk groups may be combined into a single SS7 trunk group with Clear Channel Capability when all trunks within the group are traffic engineered as a unit and all the communication paths within the group are interchangeable.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)

K. BSE Rate Applications

1. BSEs with separate nonrecurring charges, as set forth in 6.8.2., which apply on an initial and subsequent basis are:
 - Flexible ANI (BSE)
 - Called Directory Number Delivery (BSE)
 - Caller Identification - Number (BSE)
 - Caller Identification - Bulk (BSE)
 - Clear Channel Capability (BSE)
 - Message Delivery Service (BSE)
 - Message Delivery Service - Interoffice (BSE)
 - *DID* Trunk Queuing (BSE)
 - Queuing for Use With UCD (BSE)
 - Answer Supervision - Lineside (BSE)

2. BSEs with separate nonrecurring charges, as set forth in 6.8.2., which only apply on a subsequent basis are:
 - Automatic Number Identification (BSE)
 - Alternate Traffic Routing (BSE)

3. If the following BSEs are installed coincident with the initial installation of service, nonrecurring charges will not apply for the BSEs.
 - Hunt Group Arrangement (BSE)
 - Uniform Call Distribution (BSE)
 - Call Transfer (BSE)
 - Three-Way Calling (BSE)
 - Make Busy (BSE)
 - Call Forwarding Variable (BSE)

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES

L. BSE Rate Applications (Cont'd)

4. When the BSEs as set forth in 1., 2. and 3., preceding, are ordered on a subsequent basis without any other order activity, the BSE Access Service Order charge will apply, per order, except as set forth in 5., following.
5. The BSE Access Service order charge will not apply on Flexible ANI (BSE) or Clear Channel Capability (BSE).
6. The BSEs as set forth in 1., 2. and 3., preceding, are not subject to Switched Transport nonrecurring charges.

L. DNAL

1. The DNAL is a monthly rated service and is not subject to Switched Transport, Local Switching or Carrier Common Lines rates.
2. DNAL rates and charges are in addition to the rates and charges for the associated Switched Access circuit and BSE.
3. A monthly DNAL Transport Facility rate, per mileage band, and a monthly DNAL Transport Termination rate, as set forth in 6.8, following, shall be assessed per facility. The monthly rates for Entrance Facilities and DTT facilities are not applicable.
4. A nonrecurring DNAL Transport Termination charge, as set forth in 6.8, following, shall be assessed per point of termination.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)****M. Information Surcharge**

The Information Surcharge rate element recovers the cost of white page directory expenses. Information Surcharge is assigned to the Interstate Information Category through Part 36 and 69 of the F.C.C.'s rules. Information Surcharge is applicable to all Interstate Switched Access Service minutes of use. Rate applications as described in 6.7.1.D., preceding, are applicable to Information Surcharge. These rates are set forth in 6.8, following.

N. Clear Channel Capability (BSE)

When Clear Channel Capability (CCC) is ordered and installed coincident with initial installation of CST3 or FGD service, a CCC nonrecurring charge applies per trunk group in addition to the initial installation charge(s) for CST3 or FGD Service. Rates and charges for CCC are as set forth in 6.8.2, following.

When CCC is ordered on existing trunkside service, the service may be rearranged when the following conditions are met:

1. The customer changes from CST3 or FGD service with multifrequency signaling to CST3 or FGD services with SS7 out of band signaling and Clear Channel Capability with no other change in optional features and/or BSE's.
2. The customer changes from CST3 or FGD Service with SS7 out of band signaling to CST3 or FGD Services with SS7 out of band signaling and Clear Channel Capability with no other change in optional features and/or BSEs.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES****N. Clear Channel Capability (BSE) (Cont'd)**

3. The same customer premises, quantity of trunks, service type, direct routing and Interface Group Category 6 or 9 are maintained.
4. The traffic type on CST3 or FGD service is changed to the Clear Channel Capability originating and/or terminating traffic type as set forth in 6.1.1, preceding.
5. All service orders are received at the same time and the disconnect date and the connect date are the same when rearranging trunk groups from MF to SS7 out of band signaling with Clear Channel Capability.
6. Multiple MF trunk groups may be combined into a single SS7 trunk group with Clear Channel Capability when all trunks within the group are traffic engineered as a unit and all the communication paths within the group are interchangeable.

Rearrangement charges from CST3 or FGD Service with multifrequency signaling to CST3 or FGD Service with SS7 out of band signaling and Clear Channel Capability will be assessed the nonrecurring charges as set forth in 6.8.1.E.5.a. and 6.8.2.C.32., following.

Rearrangement charges from CST3 or FGD service with SS7 out of band signaling to CST3 or FGD service with SS7 out of band signaling and Clear Channel Capability, will be assessed the "first trunk" charge in association with Interface Group Category 6 or 9 service. Each additional trunk will be assessed the "each additional trunk" charge in association with Interface Group Category 6 or 9 service. The nonrecurring charge for Clear Channel Capability, as set forth in 6.8.2., is assessed per trunk group in addition to the nonrecurring charges per trunk as set forth in 6.8.1.E.5.b., following.

The removal of the CCC arrangement from existing trunkside service will be treated as a discontinuance of the existing service and installation of new service. All associated nonrecurring installation charges will apply for the new service. A new minimum period will be established for the new service.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)****O. Entrance Facility**

The Entrance Facility monthly rate is assessed based on the type of facility provided, Voice Grade, DS1 or DS3. When Lineside Switched Access Service is provided, the Voice Grade Entrance Facility rate is assessed for each Lineside service provided, unless the customer requests a DS1 or DS3 Entrance Facility. The Entrance Facility rate is assessed even when the customer's premises and the SWC are located in the same building. The Entrance Facility rate is in addition to the rates assessed for DTT and TST. Rates and charges are set forth in 6.8, following.

P. Direct-Trunked Transport

1. Except as set forth in 2. and 3., following, for each DTT facility provided, Voice Grade, DS1 or DS3, a fixed monthly rate, per mile band, and a monthly rate per mile is assessed. The DTT rates are in addition to the Entrance Facility rate. Mileage measurement is described in 6.7.11, following. Rates and charges are set forth in 6.8, following.
2. When Lineside Switched Access service is provided, the Voice Grade DTT rates are assessed for each Lineside service, unless the customer requests a DS1 or DS3 facility. DTT rates are assessed between the SWC of the customer's premises and the dial tone office. When traffic is terminated in an end office which is not the dial tone office, Tandem Transmission rates, as set forth in R., following, are assessed between the dial tone office and the end office where the traffic terminates. The Tandem Transmission rates are in addition to the DTT rates. Tandem Switching rates will not be assessed.
3. When the customer orders DTT to a remote switching system or module (RSS or RSM), DTT rates are assessed between the SWC and the host office and Tandem Transmission rates, as set forth in R., following, are assessed between the host and the RSS or RSM. Mileage measurement rules are set forth in 6.7.11, following. Tandem Switching rates will not be assessed.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)****Q. Tandem-Switched Transport**

The TST rate category is composed of Tandem Transmission, Tandem Switching Access Tandem Trunk Port and Common Transport Multiplexing rates. Mileage measurement is described in 6.7.11, following. Rates and charges are set forth in 6.8, following.

1. Tandem Transmission

The Tandem Transmission rates are assessed on a per-MOU basis when tandem routing is provided for trunkside services. Tandem Transmission rates are also assessed to FGA and CSL Service when traffic is terminated in an end office that is not the dial tone office as set forth in 6.7.11, following. The Tandem Transmission rates are portrayed in mileage bands. There are two rates that apply for each band, a fixed rate per band and a rate per mile, per minute.

2. Tandem Switching

The Tandem Switching rate is assessed on a per-MOU basis to all Switched Access minutes when tandem switching functions are utilized. Tandem Switching is not assessed to FGA or CSL Service.

3. Access Tandem Trunk Port

The Access Tandem Trunk Port (ATTP) is a monthly rate assessed per FG or BSA trunk in service terminating on the serving wire center side of the access tandem. If the customer combines Voice DA with trunkside Switched Access Service, only one ATTP charge is assessed per trunk. ATTP is not assessed to FGA or CSL.

4. Common Transport Multiplexing

Common transport multiplexing is a per-MOU rate assessed to all Switched Access minutes utilizing common transport from the access tandem to all subtending end offices for trunkside services. Nonrecurring charges are not assessed for common transport multiplexing.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.1 DESCRIPTION AND APPLICATION OF RATES AND CHARGES (Cont'd)****R. Multiplexing associated with EF and DTT facilities**

A nonrecurring charge is assessed per arrangement when multiplexing equipment is not installed at the same time as the associated Entrance Facility and/or DTT facility. The multiplexing monthly rate is assessed on a per-arrangement basis as set forth in 6.8.1, following.

S. 500 Access Service

A 500 Access Service Carrier Identification Charge is assessed for each 5YY call delivered to the customer. This charge is in addition to the rates and charges for the rate categories described in 6.1.2, preceding, which are applicable to all Switched Access Services. The per-call rate is set forth in 6.8.2, following.

An Activation Nonrecurring Charge applies to activate the 5YY NXX code(s). This charge is assessed per NXX code, per required point of six-digit translation.

In addition to the Activation Nonrecurring Charge, a Route Pattern Nonrecurring Charge is assessed on a initial and subsequent basis when the customer orders 500 Access Service in a LATA to establish a route pattern. This charge is assessed per each point in the network where 5YY service routing logic is required to deliver 500 traffic to the identified access customer. The nonrecurring charges for 500 Access Service are set forth in 6.8.2, following.

T. Carrier Identification Parameter

A monthly recurring rate is assessed per CST3 or Feature Group D trunk equipped with Carrier Identification Parameter (CIP). When CST3 and Feature Group D Switched Access is initially ordered as new service with the SS7 Out of Band Signaling and the CIP option, the CIP Nonrecurring Charge is assessed in addition to the installation charges for the Feature Group D trunks, per access order. When the CIP optional feature is ordered on existing CST3 or Feature Group D trunks equipped with SS7 Out of Band Signaling, the SS7 Out of Band Signaling Service Order Rearrangement Charge and the CIP Nonrecurring Charge are assessed per access order. When existing CST3 or Feature Group D Switched Access with Multifrequency (MF) signaling is being rearranged to be equipped with SS7 Out of Band Signaling and the CIP optional feature, the SS7 Service Order Rearrangement Charge, the SS7 Rearrangement Charges and the CIP Nonrecurring Charge are assessed. The SS7 Service Order Rearrangement charge and the SS7 Trunk Rearrangement Charges are set forth in 6.8.1.D., following, and the CIP Nonrecurring Charge is set forth in 6.8.2.G., following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS (Cont'd)****6.7.2 MINIMUM PERIODS**

Minimum periods for Switched Access Service are described in 5.2.5, preceding.

6.7.3 MINIMUM MONTHLY CHARGE

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total capacity provided. The minimum monthly charge consists of the following elements:

- The minimum monthly charge for usage rated elements is the sum of the charges set forth in 6.8, following, for the measured or assumed usage for the month.
- For monthly rated elements, the minimum monthly charge is the tariffed monthly rate as set forth in 6.8, following.
- When Lineside Access or *DID* services are provided where actual measurement capabilities do not exist, the customer will always be billed for the assumed average number of access minutes for all applicable usage rated elements.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS (Cont'd)****6.7.4 CHANGE OF SWITCHED ACCESS INTERFACE GROUP CATEGORY**

Changes from one Switched Access Service Interface Group Category to another will be treated as a discontinuance of service and the installation of service with the establishment of a new minimum period as set forth in 5.2.5, preceding. When the following conditions are met, the nonrecurring charges will not apply:

- A. Interface Group Category 6 (IG6) on CST1 or Feature Group B Service to Interface Group Category 9 (IG9) on CST1 or Feature Group B and CST3 or Feature Group D Service
- The same customer premises, quantity of trunks, routing, traffic type, direction (i.e., one-way, two-way), optional features and BSEs are maintained.
 - The orders for the change from IG6 to IG9 are received at the same time.
 - The trunks are upgraded from IG6 to IG9 in groups of 24 trunks.
 - In accordance with 6.7.5, following, the disconnect date for the CST1 or FGB Service with IG6 is no more than 90 days from the connect date of the CST3 or FGD Service with IG9.
 - The disconnect date for IG6 is the connect date for IG9 when the CST1 or FGB service type is not changing.
- B. Interface Group Category 6 to Interface Group Category 9 on CST3 or Feature Group D Service
- The same customer premises, quantity of trunks, service type, routing, traffic type, direction (i.e., one-way, two-way), optional features and BSEs are maintained.
 - The orders for the change from IG6 to IG9 are received at the same time.
 - The trunks are upgraded from IG6 to IG9 in groups of 24 trunks.
 - The disconnect date for IG6 is the connect date for IG9.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS (Cont'd)

6.7.5 CHANGE OF SWITCHED ACCESS SERVICE TYPE

Changes from one type of Switched Access Service to another will be treated as a discontinuance of service and the installation of service with the establishment of a new minimum period as set forth in 5.2.5, preceding. When the following conditions are met, nonrecurring charges will not apply.

A. Service type upgrade from CSL, CST1, FGA or FGB to CST3 or FGD Service

- The same customer premises, quantity of trunks, routing, traffic type, direction (i.e., one-way, two-way), optional features and BSE's are maintained.
- The same interface group category is maintained (except as set forth in 6.7.4, preceding).
- The orders for the disconnect of the Lineside connection, CST1 or FGB Service and the start of CST3 or FGD Service are placed with the Company at the same time.
- The disconnect date for the Lineside connection, CST1 or FGB Service is no more than 90 days from the connect date of CST3 or FGD Service.
- At the customer's option, the Company will allow a change to SS7 out of band signaling and a change in direction from one-way to two-way at the same time as the service type upgrade. When this kind of request is received, the customer will be assessed an SS7 Rearrangement Charge when conditions in 6.7.1.C.5., preceding and the above conditions are met. A new minimum period as set forth in 5.2.5, preceding, will also be established.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.5 CHANGE OF SWITCHED ACCESS SERVICE TYPE (Cont'd)**

- B. Service type upgrade from CST2 or Feature Group C Service to CST3 or Feature Group D Service

When CST2 or FGC service is upgraded to a CST3 or FGC service, the nonrecurring charge will not apply. Because CST2 or FGC is no longer available in an end office once the end office is equipped with equal access capabilities, such upgrades will be performed by the Company without the customer being required to place an order for the change, unless a customer specifies an increase in the number of transmission paths.

When the effective dates for the disconnect and start of service are the same, the minimum period, as set forth in 5.2.5, preceding, will not change. When the effective dates for the disconnect and start of service are different, a new minimum period will be established for the CST3 or FGD Service. For all other changes other than a change in service type, a new minimum period will be established on the CST3 or FGD.

At the customer's option, the Company will allow a change to SS7 out of band signaling and a change in direction from one-way to two-way to occur at the same time the CST2 or FGC is upgraded to CST3 or FGD. When this kind of request is received, the customer will be assessed a SS7 Rearrangement Charge when conditions in 6.7.1.C.5., preceding, are met. When upgrading CST2 or FGC to CST3 or FGD with SS7 out of band signaling, the disconnect date and the connect date on the orders must be the same date and a new minimum period will apply on the CST3 or FGD service.

If a customer has the optional feature, Multiple POTS Tandem Sectorization (MPTS) and a non-equal access end office is upgraded to a equal access end office with the tandem serving area, the MPTS nonrecurring charges do not apply.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS (Cont'd)****6.7.6 MOVES**

A move involves a change in the physical location or reconfiguration of the following:

- The point of termination of the Entrance Facility (EF) at the customer's premises is moving
- The customer's premises and associated EF is moving
- The DTT facility and associated Lineside and/or Trunkside Switched Access Services are reconfigured as set forth in A. and B., following.

The charges for a move or reconfiguration are dependent on whether the move or reconfiguration is within the same serving wire center, as set forth in A., following, or to a different serving wire center, as set forth in B., following. New minimum period requirements will be established for moved or reconfigured services. Any changes to the existing Switched Access facilities, lines, trunks, optional features and BSEs as they exist at the current location, excluding a change in Circuit Facility Assignment (CFA), made in conjunction with a move or reconfiguration will be treated as a discontinuance and a start of new service and all associated nonrecurring installation charges will apply. The addition of lines and trunks made in conjunction with a move or reconfiguration will be treated as a start of new service and all associated nonrecurring installation charges and new minimum period requirements will apply. The customer will also remain responsible for satisfying all outstanding minimum period charges for any disconnected service as the result of a move or reconfiguration.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.6 MOVES (Cont'd)****A. Application of Move Charges Within the Same Serving Wire Center (SWC)**

1. EF Move to a New Location Within the Same Building, Same SWC, for the Same Customer

The charge for moving an EF to a new location within the same building, same SWC, for the same customer, is one-half of the Move Within the Same Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed one-half of the "first" move charge and each additional line or trunk is assessed one-half of the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. In addition, one-half of the EF Nonrecurring Installation charge based on the capacity affected, per point of termination, per Access Order is assessed.

2. Reconfiguration of a DTT Facility and Associated Lineside or Trunkside Switched Access Services from an EF of One Customer to an EF of Another Customer, or to an Expanded Interconnection-Collocation Channel Termination (EICT) or Interconnect Tie Pair (ITP) all Within the Same Building, Same SWC. EICT and ITP are set forth in Section 21.

The charge for reconfiguring a DTT facility and associated Lineside or Trunkside Switched Access Services from an EF of one customer to (a.) an EF of another customer where its customer premises is located within the same building, same SWC, or (b.) to an EICT or ITP located within the same building, same SWC, is one-half of the Move Within the Same Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed one-half of the "first" move charge and each additional line or trunk is assessed one-half of the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. The customer providing the EF, EICT, or ITP is responsible for providing the CFA and is assessed an EF, EICT, or ITP Nonrecurring Installation charge when a new EF, EICT, or ITP is ordered.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.6 MOVES****A. Application of Move Charges Within the Same Serving Wire Center (Cont'd)**

3. Reconfiguration of a DTT Facility and Associated Lineside or Trunkside Switched Access Services from One EICT or ITP to Another EICT or ITP, all Within the Same Building, Same SWC.

The charge for reconfiguring a DTT facility and associated Lineside or Trunkside Switched Access Services from one EICT or ITP to another EICT or ITP within the same building, same SWC, is one-half of the Move Within the Same Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed one-half of the "first" move charge and each additional line or trunk is assessed one-half of the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. The customer providing the EICT or ITP is responsible for providing the CFA and is assessed an EICT or ITP Nonrecurring Installation charge when a new EICT or ITP is ordered.

4. Reconfiguration of a DTT Facility and Associated Lineside or Trunkside Switched Access Services from an EICT or ITP to an EF, all Located Within the Same Building, Same SWC.

The charge for reconfiguring a DTT facility and associated Lineside or Trunkside Switched Access Services from an EICT or ITP to an EF where its customer premises is located within the same building, same SWC, is one-half of the Move Within the Same Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed one-half of the "first" move charge and each additional line or trunk is assessed one-half of the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. The customer providing the EF is responsible for providing the CFA and is assessed an EF Nonrecurring Installation charge when a new EF is ordered.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.6 MOVES****A. Application of Move Charges Within the Same Serving Wire Center (Cont'd)****5. EF Move to a Different Building, Same SWC for the Same Customer**

The charge for moving an EF to a different building, same SWC, for the same customer is the Move Within the Same Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed the "first" move charge and each additional line or trunk is assessed the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. In addition, a full EF Nonrecurring Installation charge based on the capacity affected, per point of termination, per Access Order is assessed.

6. Reconfiguration of a DTT Facility and Associated Lineside or Trunkside Switched Access Services from an EF of One Customer to an EF of Another Customer or to an EICT or ITP Located in a Different Building, Same SWC.

The charge for reconfiguring a DTT facility and associated Lineside or Trunkside Switched Access Services from an EF of one customer to (a.) an EF of another customer where its customer premises is located in a different building, same SWC, or (b.) to an EICT located in a different building, same SWC is the Move Within the Same Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed the "first" move charge and each additional line or trunk is assessed the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. The customer providing the EF, EICT, or ITP is responsible for providing the CFA and is assessed an EF, EICT, or ITP Nonrecurring Installation charge when a new EF, EICT, or ITP is ordered.

7. Reconfiguration of a DTT Facility and Associated Lineside or Trunkside Switched Access Services from an EICT or ITP to an EF Located in a Different Building, Same SWC.

The charge for reconfiguring a DTT facility and associated Lineside or Trunkside Switched Access Services from an EICT or ITP to an EF where its customer premises is located in a different building, same SWC, is the Move Within the Same Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed the "first" move charge and each additional line or trunk is assessed the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. The customer providing the EF is responsible for providing the CFA and is assessed an EF Nonrecurring Installation charge when a new EF is ordered.

6.7 RATE REGULATIONS

6.7.6 MOVES (Cont'd)

B. Application of Move Charges to a Different Serving Wire Center (SWC)

1. EF Move to a Different SWC for the Same Customer

The charge for moving an EF to a different SWC for the same customer is assessed the Move to a Different Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed the "first" move charge and each additional line or trunk is assessed the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. In addition, a full EF Nonrecurring Installation charge based on the capacity affected, per point of termination, per Access Order is assessed.

2. Reconfiguration of a DTT Facility and Associated Lineside or Trunkside Switched Access Services from an EF of One Customer to an EF of Another Customer or to an EICT or ITP in a Different SWC.

The charge for reconfiguring a DTT facility and associated Lineside or Trunkside Switched Access Services from an EF of one customer to (a.) an EF of another customer where its customer premises is served by a different SWC or (b.) to an EICT or ITP located in a different SWC is the Move to A Different Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed of the "first" move charge and each additional line or trunk is assessed of the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. The customer providing the EF, EICT, or ITP is responsible for providing the CFA and is assessed an EF, EICT, or ITP Nonrecurring Installation charge when a new EF, EICT, or ITP is ordered.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.6 MOVES**

- B. Application of Move Charges to a Different Serving Wire Center (SWC) (Cont'd)
3. Reconfiguration of a DTT Facility and Associated Lineside or Trunkside Switched Access Services from One EICT or ITP to Another EICT or ITP Located in a Different SWC

The charge for reconfiguring a DTT facility and associated Lineside or Trunkside Switched Access Services from one EICT or ITP to another EICT or ITP located in a different SWC is the Move to a Different Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed the "first" move charge and each additional line or trunk is assessed the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. The customer providing the EICT or ITP is responsible for providing the CFA and is assessed an EICT or ITP Nonrecurring Installation charge when a new EICT or ITP is ordered.

4. Reconfiguration of a DTT Facility and Associated Lineside or Trunkside Switched Access Services from an EICT or ITP to an EF Located in a Different SWC

The charge for reconfiguring a DTT facility and associated Lineside or Trunkside Switched Access Services from an EICT or ITP to an EF where its customer premises is served by a different SWC is the Move to a Different Serving Wire Center charge as set forth in 6.8.1, following. The first line or trunk is assessed the "first" move charge and each additional line or trunk is assessed the "each additional" move charge per Interface Group 1, 2, 6 or 9, per Access Order. The customer providing the EF is responsible for providing the CFA and is assessed an EF Nonrecurring Installation charge when a new EF is ordered.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS (Cont'd)

6.7.7 MEASURING ACCESS MINUTES

Customer traffic to end office switches will be measured (i.e., recorded or assumed) by the Company at end office switches or access tandem switches. Originating and terminating calls will be measured (i.e., recorded or assumed) by the Company to determine the basis for computing chargeable access minutes. In the event the customer message detail is not available because the Company lost or damaged tapes or experienced recording system outages, the Company shall estimate the volume of lost customer access minutes of use based on previously known values. The measured minutes are the chargeable access minutes for calls over the following serving arrangements:

- For terminating calls over
 - CSL and FGA
 - CST1 and FGB
 - CST2 to 800/800-type and FGC to 800/800-type
 - CST3 and FGD
- For originating calls over
 - CSL and FGA used for resale
 - CST1 and FGB
 - CST2 and FGC (where measurement capability is available)
 - CST3 and FGD
 - *DID*
- For originating calls over CSL and FGA not used for resale

For originating calls over CSL and FGA not used for resale and CST2 and FGC (where measurement capability is not available), chargeable originating access minutes are derived from recorded minutes in the following manner.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.7 MEASURING ACCESS MINUTES (Cont'd)

STEP 1

Obtain recorded originating minutes and messages (measured as set forth in A., and C. following for CSL and FGA not used for resale and CST2 and FGC where measurement capability is not available, respectively) from the appropriate recording data.

STEP 2

Obtain the total messages and attempts by multiplying the originating measured messages by the "attempts per message ratio". "Attempts per message ratios" (A/M) are obtained separately for the major call categories such as DDD, operator, 5YY, 8XX, 900, Voice DA and international from a sample study which analyzes the ultimate completion status of the total attempts which receive acknowledgment from the customer. That is, Measured Messages divided by Completion Ratio equals Total Attempts.

STEP 3

Obtain the total non-conversation time additive (NCTA) by multiplying the total attempts (obtained in Step 2) by the NCTA per-attempt ratio. The NCTA per-attempt ratio is obtained from the sample study identified in Step 2 by measuring the non-conversation time associated with both completed and incompleting attempts. The total NCTA is the time on a completed attempt from customer acknowledgment of receipt of call to called party answer (set up and ringing) plus the time on an incompleting attempt from customer acknowledgment of call until the access tandem or end office receives a disconnect signal (ring - no answer, busy or network blockage). That is, Total Attempts times Non-Conversation Time per Attempt Ratio equals Total NCTA.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.7 MEASURING ACCESS MINUTES (Cont'd)

STEP 4

Obtain total chargeable originating access minutes by adding the total NCTA (obtained in Step 3) to the recorded originating measured minutes (obtained in Step 1). That is, Measured Minutes plus NCTA equals Chargeable Originating Access Minutes.

Following is an example which illustrates how the chargeable originating access minutes are derived from the measured originating minutes using this formula.

Where:	Measured Minutes (M. Min.)	=	7,000
	Measured Messages (M. Mes.).....	=	1,000
	Attempts Per Message Ratio (A/M)	=	1.333
	NCTA Per Attempt.....	=	.4
1.	Total Attempts = 1,000 (M. Mes.) x 1.333.....	=	1,333
2.	Total NCTA = .4 (NCTA per Attempt) x 1,333.....	=	533.2
3.	Total Chargeable Originating Access Minutes =		
	7,000 (M. Min.) + 533.2 (NCTA)	=	7,533.2

When assumed minutes are used, the assumed minutes are the chargeable access minutes.

Lineside access minutes or fractions thereof, the exact value of the fraction being a function of the switch technology where the measurement is made, are accumulated over the billing period for each line or hunt group, and are then rounded up to the nearest access minute for each line or hunt group. Trunkside access minutes or fraction thereof, the exact value of the fraction being a function of the switch technology where the measurement is made, are accumulated over the billing period for each end office, and are then rounded up to the nearest access minute for each end office.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.7 MEASURING ACCESS MINUTES (Cont'd)

Assumed minutes are used for Lineside and *DID* Access Services which originate or terminate in end offices not equipped with measurement capabilities.

The assumed average interstate access minutes are set forth following.

- When a Lineside service arranged for two-way calling is provided where neither the originating nor the terminating access minutes are recorded, the average interstate access minutes will be assumed.
- Where recording capability exists for either originating or terminating usage, but not both, on a line arranged for two-way calling, the number of access minutes per-line will be the assumed average interstate access minutes, or the recorded usage, whichever is greater. If the usage in the measured direction exceeds the assumed number of minutes, it will be assumed that there is zero usage in the unmeasured direction. If the measured usage is less than the assumed number of minutes, the usage in the unmeasured direction will be assumed to be the assumed number of access minutes minus the measured usage (e.g., 5919 - 4000 measured = 1919 assumed in unmeasured direction).

Assumed Average Interstate Access Minutes

5943

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.7 MEASURING ACCESS MINUTES (Cont'd)

- When a Lineside service arranged for originating calling only is provided where originating access minutes are not recorded, the average originating access minutes will be assumed, and no terminating access minutes will apply.

Assumed Average Originating Access Minutes

3732

- When a Lineside service arranged for terminating calling only is provided where terminating access minutes are not recorded, the terminating access minutes will be assumed, and no originating access minutes will apply.

Assumed Average Terminating Access Minutes

2211

- When any or all of the usage over an unmeasured access line originates from or terminates to a WATS Access Line and the total access line usage recorded at the WATS Serving Office exceeds the assumed usage set forth preceding for Lineside Access, the recorded usage will be billed to the customer in lieu of the assumed usage.

APPLICABLE IN ID (SPOKANE LATA), OR, WA ONLY

When a *DID* Switched Access Service is provided where originating *DID* access minutes are not recorded, the assumed average originating access minutes are 5119 access minutes.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.7 MEASURING ACCESS MINUTES (Cont'd)

A. Lineside Access Usage Measurement

For originating calls over Lineside Access, usage measurement begins when the originating Lineside Access entry switch receives an off-hook supervisory signal forwarded from the customer's point of termination. (Where Lineside Access is used for resale, this off-hook signal is generally provided by the customer's equipment. Where Lineside Access is not used for resale, the off-hook signal is generally forwarded by the customer's equipment when the called party answers.)

The measurement of originating call usage over Lineside Access ends when the originating Lineside Access entry switch receives an on-hook supervisory signal from either the originating end user's end office, indicating the originating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

For terminating calls over Lineside Access, usage measurement begins when the terminating Lineside Access entry switch receives an off-hook supervisory signal from the terminating end user's end office, indicating the terminating end user has answered. The measurement of terminating call usage over Lineside Access ends when the terminating Lineside Access entry switch receives an on-hook supervisory signal from either the terminating end user's end office, indicating the terminating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.7 MEASURING ACCESS MINUTES (Cont'd)

B. CST1 and Feature Group B Usage Measurement

For originating calls over CST1 and FGB, usage measurement begins when the originating CST1 or FGB entry switch receives answer supervision forwarded from the customer's point of termination, indicating that the customer's equipment has answered.

The measurement of originating call usage over CST1 and FGB ends when the originating CST1 or FGB entry switch receives disconnect supervision from either the originating end user's end office, indicating the originating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

For terminating calls over CST1 and FGB, usage measurement begins when the terminating CST1 or FGB entry switch receives answer supervision from the terminating end user's end office, indicating the terminating end user has answered.

The measurement of terminating call usage over CST1 and FGB ends when the terminating CST1 or FGB entry switch receives disconnect supervision from either the terminating end user's end office, indicating the terminating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

C. CST2 and Feature Group C Usage Measurement

For originating calls over CST2 and FGC, if measurement capabilities are not available, usage measurement begins when the originating CST2 or FGC entry switch receives answer supervision from the customer's point of termination, indicating the called party has answered. If measurement capabilities are available, usage measurement begins when the originating CST2 or FGC entry switch receives the first wink supervisory signal forwarded from the customer's point of termination.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.7 MEASURING ACCESS MINUTES

C. CST2 and Feature Group C Usage Measurement (Cont'd)

The measurement of originating call usage over CST2 and FGC ends when the originating CST2 or FGC entry switch receives disconnect supervision from either the originating end user's end office, indicating the originating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

For terminating calls over CST2 and FGC to services other than 800/800-type, 900 or Voice DA, terminating CST2 and FGC usage may not be directly measured at the terminating entry switch, but may be imputed from originating usage, excluding usage from calls to 8XX, 900 or Voice DA Services. Actual measured usage will be used where available, rather than an imputed value.

For terminating calls over CST2 and FGC to 800/800-type usage measurement begins when the terminating CST2 or FGC entry switch receives answer supervision from the terminating end user's end office, indicating the terminating 800/800-type end user has answered.

The measurement of terminating call usage over CST2 and FGC to 800/800-type ends when the terminating CST2 or FGC entry switch receives an on-hook supervisory signal from the terminating end user's end office, indicating the terminating end user has disconnected, or from the customer's point of termination, whichever is recognized first by the entry switch.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.7 MEASURING ACCESS MINUTES (Cont'd)

D. CST3 and Feature Group D Usage Measurement

1. Originating Usage Measurement

a. Multifrequency Signaling

- For originating calls over CST3 and FGD, usage measurement begins when the originating CST3 or FGD entry switch receives the first wink supervisory signal forwarded from the customer's point of termination.
- The measurement of originating call usage over CST3 and FGD ends when the originating CST3 or FGD entry switch receives disconnect supervision from either the originating end user's end office, indicating the originating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

b. SS7 Out of Band Signaling

- For originating calls over CST3 or FGD, usage measurement on direct trunks begins when the CST3 or FGD entry switch sends an Initial Address Message (IAM). The usage measurement for trunks via an access tandem or customer-provided tandem switch begins when the CST3 or FGD entry switch receives an Exit Message (EXM).
- The measurement of originating call usage over CST3 or FGD with SS7 out of band signaling ends when a Release Message is sent or received by the originating end user's end office, whichever occurs first.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.7 MEASURING ACCESS MINUTES**

D. CST3 and Feature Group D Usage Measurement (Cont'd)

2. Terminating Usage Measurement

- For terminating calls over CST3 and FGD, the measurement of access minutes begins when the terminating CST3 or FGD entry switch receives answer supervision from the terminating end user's end office, indicating the terminating end user has answered.
- The measurement of terminating call usage over CST3 and FGD ends when the terminating CST3 or FGD entry switch receives disconnect supervision from either the terminating end user's end office, indicating the terminating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

E. Direct Inward Dial (*DID*) Switched Access Service**AVAILABLE IN ID (SPOKANE LATA), OR, WA ONLY**

For originating calls over *DID* Switched Access Service, usage measurement begins when the originating *DID* switch receives an answer supervision signal forwarded from the customer's point of termination. This answer supervision signal must be provided by the customer's premises equipment upon receipt of the outpulsed *DID* telephone number from the *DID* switching office.

The measurement of originating call usage over *DID* ends when the originating *DID* switch receives an on-hook supervisory signal from either the originating end user's end office, indicating the originating end user has disconnected, or the customer's point of termination, whichever is recognized first.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS (Cont'd)****6.7.8 APPLICATION OF RATES FOR EXTENSION SERVICE**

Lineside Switched Access Service is available with extensions, i.e., additional terminations of the service at different building(s) in the same or a different LATA. Lineside extensions within the LATA and same states are charged for under the Telephone Company's local and/or general exchange service tariffs. Lineside extensions in different LATAs, or in a different state in the same LATA, are charged for as Private Line Transport Service. The rate elements which apply are: A Voice Grade Channel Termination, Channel Mileage, if applicable, and signaling capability, if applicable. All appropriate monthly rates and nonrecurring charges set forth in Section 7, following, will apply. Such extensions are ordered as set forth in 5.2, preceding.

6.7.9 MESSAGE UNIT CREDIT

Calls from end users to the seven digit local telephone numbers associated with Lineside Switched Access Service may be subject to Telephone Company local and/or general exchange service tariff charges (including message unit and toll charges as applicable), as well as any other applicable charges for the Access Service. The monthly bills rendered to customers for their Lineside Switched Access Service for which Carrier Common Line rates apply will include a credit to reflect any message unit charges collected from their end users under the Telephone Company's local and/or general exchange service tariffs. The credit will apply for recorded originating usage or for assumed originating usage, as appropriate, for the Lineside service provided. When the credit is applied on assumed usage, such credit will not exceed the assumed levels of usage set forth in 6.7.7, preceding. No Message Unit Credit will apply for any terminating Lineside Access minutes. The Message Unit Credit for originating Lineside Access minutes is set forth in 6.8, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS (Cont'd)****6.7.10 LOCAL INFORMATION DELIVERY SERVICES**

Calls over Switched Access in the terminating direction to certain community information services (e.g., 976) will be rated under the applicable rates for Switched Access Service as set forth in 6.8, following. In addition, non-access charges will also apply in accordance with the Information Provider's applicable service rates when the Company performs the billing function for that Information Provider.

6.7.11 MILEAGE MEASUREMENT

The mileage to be used to determine the Switched Transport rate for direct routed traffic via DTT is calculated on the airline distance between the end office switch, or the serving wire center of a Mobile Telephone Switching Office (MTSO), where the call originates or terminates and the customer's serving wire center. For tandem routed traffic, DTT is calculated from the access tandem to the customer's serving wire center and TST is calculated on the airline distance between the end office switch, or the serving wire center of a MTSO, where the call originates or terminates and the access tandem. Exceptions for mileage measurement are as set forth in A. through H., following. The V & H coordinates method is used to determine mileage. This method is set forth in National Exchange Carrier Association, Inc. Tariff F.C.C. No. 4 for Wire Center Information (V & H coordinates).

Mileage is shown in terms of mileage bands as set forth in 6.8, following, in terms of mileage bands. To determine the rate to be billed, first compute the mileage, using the V & H coordinates method; then, find the band into which the computed mileage falls, and apply the rate shown for that band. If the calculation results in a fraction of a mile, always round up to the next whole mile before determining the mileage band and applying the rates.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.11 MILEAGE MEASUREMENT (Cont'd)**

Exceptions to the mileage measurement rules are as follows:

- A. Mileage for Lineside Switched Access provided by DTT in the originating direction is calculated on an airline basis, using the V & H coordinates method, between the end office switch where the Lineside switching dial-tone is provided and the customer's serving wire center for the Switched Access Service provided.

Mileage for Lineside Switched Access provided by DTT in the terminating direction is calculated on an airline basis, using V & H coordinates method, between the end office switch where the Lineside switching dial-tone is provided and the customer's serving wire center when traffic is terminated in the dial-tone office or an end office without measurement capability. When traffic is terminated in an end office with measurement capability and is not the dial-tone office, Tandem Transmission rates are applicable as set forth in 6.7.1, preceding, and mileage will be calculated between the dial-tone office and the end office where the traffic terminates for the application of Tandem Transmission rates. The Tandem Transmission rates are in addition to the DTT rates.

- B. When the customer orders access service via DTT to a host for access to a remote switching system or module (RSS or RSM), both DTT and Tandem Transmission rates apply as set forth in 6.7.1, preceding. Mileage for DTT is calculated on an airline basis between the SWC of the customer's premises or Company Hub, whichever is applicable, and the host office for the RSS or RSM. Mileage for Tandem Transmission is calculated between the host office and the RSS or RSM.

When the customer orders TST from an access tandem to a host for access to a RSS or RSM, mileage for Tandem Transmission is calculated between the access tandem and the host office and then a second mileage measurement is calculated between the host office and the RSS or RSM.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.11 MILEAGE MEASUREMENT (Cont'd)**

- C. When the Switched Transport for Switched Access Service is provided by the Company and the end user connection is provided by a Commercial Mobile Radio Service provider, mileage for access is calculated on an airline basis, using the V & H Coordinate Method as set forth in this section based on tandem or direct routing. The serving wire center of the MTSO functions as the end office for mileage calculations for direct routed traffic via DTT.

For tandem routed traffic, if the Company and the Commercial Mobile Radio Service provider are jointly providing Switched Access Service, the serving wire center of the MTSO functions as the end office for mileage calculations. If the Company and the Commercial Mobile Radio Service are not jointly providing Switched Access Service, the tandem provider's End Office or Access Tandem Switch which is geographically closest to the MTSO functions as the end office for mileage calculations.

- D. The mileage measurement portion of the DNAL will be calculated on an airline mile basis, using the V & H coordinates method, between the customer premises serving wire center and the Company central office where the DNAL terminates.
- E. When jointly provisioned Switched Access is provided between the Company and another Exchange Telephone Company in conjunction with 800 DB Access Service and ANI cannot be identified, the Company and the other Exchange Telephone Company will mutually agree upon an end office designation to determine an existing end office that reflects the closest mileage measurement to the average Switched Transport miles. This end office designation can then be used for purposes of determining the appropriate mileage by using the V&H coordinate method. When the ANI can be determined, the originating end office will be used to determine the Switched Transport mileage.
- F. When DTT Switched Transport facilities of different capacities or bandwidths are connected by a multiplexer at a Company Hub, mileage is determined using the V & H coordinates method. Mileage for DTT is measured separately from the serving wire center to the Company Hub where multiplexing occurs and then measured from the Company Hub to the end office.
- G. When DTT is provided from the SWC to an access tandem in conjunction with TST to subtending end offices, the mileage is determined using the V & H coordinates method. Mileage for DTT is measured between the SWC and the access tandem and mileage for TST is measured from the access tandem to the end offices.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.11 MILEAGE MEASUREMENT (Cont'd)**

- H. When SST facilities are provided in conjunction with Switched Access Services, mileage is determined using the V & H coordinates method in the following manner. When DTT facilities connect at a SST CO Node (The SST CO Node must be located in the customer's SWC.), DTT is measured from the SST CO Node to an access tandem, Company hub or end office. When SST facilities are provided from a SST CO Node to a Remote CO Node, SST transport channel mileage is assessed between the nodes and DTT mileage is assessed from the Remote CO Node to an access tandem, Company hub or end office. If tandem routing is utilized, TST mileage is assessed between the access tandem and the end office. The mileage for the SST transport channel is measured separately from the mileage of the DTT and TST facilities.
- I. Mileage Measurement for Switched Transport connected to Expanded Interconnection-Collocation (EIC) Service is determined as follows:
- If the EIC Service and the access tandem are in the same wire center building, the zero mileage band is used for the transport between the EIC Service and the access tandem. Mileage measurement for TST from the access tandem to subtending end offices not located in the same wire center building as the access tandem is calculated using the V&H coordinate method. If the subtending end office is in the same wire center building, a zero mileage band applies.
 - Mileage measurement for DTT is calculated using the V&H coordinate method between the EIC Service wire center building and the access tandem when the EIC Service and access tandem are in different wire center buildings.
 - Mileage measurement for DTT between the EIC Service and the end office when the DTT connects to EIC Service in the same wire center building as the end office is a zero mileage band. When the end office is not located in the same wire center building, mileage measurement is calculated using the V&H coordinate method.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS (Cont'd)****6.7.12 SHARED USE**

Shared Use is available on DS1 with 36 and 60 month Switched Access pricing plans and on DS3 with 12, 24, 36, 60 and 120 month Switched Access pricing plans. Additional regulations governing the provision of Switched Access Shared Use facilities are set forth in 2.7.

6.7.13 PERCENT DIRECT ROUTED (PDR) FACTOR

When the customer orders Trunkside Switched Access Service, and the Company is unable to determine routing based on the call detail, the Company apportions usage between TST and DTT based on a state PDR factor. The PDR factor determines the percentage of traffic to be billed TST rates. DTT monthly rates will not be apportioned by the PDR factor.

The Company calculates the PDR factor in the following manner:

Step 1: The Company obtains the total billed usage for all Switched Access Services on a state-wide basis.

Step 2: The Company obtains the total billed usage for all Switched Access Services utilizing TST on a state-wide basis.

Step 3: The percentage of TST traffic is obtained by dividing the total TST billed usage obtained in Step 2 by the total billed usage in Step 1.

Step 4: The percentage in Step 3 is subtracted from 100 to determine the percentage of DTT traffic (PDR factor).

Step 5: The percentage in Step 3 is multiplied by the total number of access minutes that the Company was unable to determine routing for in that specific state.

This PDR factor will serve as the basis for billing until a revised PDR factor is calculated annually based on the previous year's usage.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS (Cont'd)

6.7.14 DENSITY ZONE PRICING PLAN

A. General

The Density Zone Pricing Plan allows the Company pricing flexibility in states where an operational Switched Access Expanded Interconnection-Collocation Service (EIC) as set forth in Section 21, exists.[1]

The Density Zone Pricing Plan consists of Zones 1, 2 and 3. The Density Zone Pricing Plan applies to EF DS1 and DS3, DTT DS1 and DS3, EF DS1 to VG multiplexing, EF DS3 to DS1 multiplexing, DTT DS1 to VG multiplexing, DTT DS3 to DS1 multiplexing and DS1 to DS3 rollover rates and charges in states where an operational Expanded Interconnection Service exists. For those states where an operational Expanded Interconnection Service does not exist, Non-Plan rates are applicable.

For DTT DS1 and DTT DS3 and associated multiplexing equipment provisioned between a Company serving wire center in one zone and a Company Hub, tandem or end office wire center located in a different zone, the zone with the highest mileage rate is the applicable zone rate.

Density zones are designated by wire center in National Exchange Carrier Association, Inc., Tariff F. C. C. No. 4.

[1] The Density Zone Pricing Plan is applicable in the states of AZ, CO, IA, MN, NE, NM, OR, UT and WA.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS (Cont'd)****6.7.15 SWITCHED TRANSPORT PRICING PLANS**

Switched Transport Pricing Plans are available with certain services in some states when interconnectors have taken either 100 DS1-equivalent cross-connects for the transmission of Switched Access traffic in Zone 1 offices in a state or have taken an average of 25 DS1-equivalent cross-connects for the transmission of Switched Access traffic per Zone 1 office in a state.[1]

Pricing Plans available for Switched Access Transport DS1 and DS3 ordered and provisioned from this section are described in A., following. When PLTS is ordered and provisioned under a Pricing Plan, and the customer chooses to order Switched Access Service in conjunction with that PLTS Service, the Pricing Plan Shared Use regulations as described in B., following, are applicable.

A. Switched Transport DS1 and DS3 Pricing Plans

A Pricing Plan allows a customer to integrate digital services into their network with the assurance that Company-initiated increases in monthly rates during the fixed period plan will not occur.

DS1 or DS3 EF, DS1 or DS3 DTT facilities and/or DS3 to DS1 or DS1 to Voice Grade CO Multiplexing optional features may be ordered at the customer's option on a month-to-month basis or under a Pricing Plan for a fixed period of time.

The customer must specify the length of the Pricing Plan fixed period at the time the initial service is ordered. The fixed periods for an EF, DTT facility and associated CO Multiplexing may be different. The minimum period a customer must have for any Pricing Plan is twelve months.

[1] Pricing Plans are available in the states of AZ, CO, IA, MN, NE, NM, OR, UT and WA. Pricing Plans are not available for DID Service.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.15 SWITCHED TRANSPORT PRICING PLANS

A. Switched Transport DS1 and DS3 Pricing Plans (Cont'd)

The following fixed periods are available for Switched Transport DS1 and DS3 Pricing Plans:

- For DS1 EF or DS1 DTT, the customer's Pricing Plan fixed period is available in thirty-six (36) or sixty (60) month increments.
- For DS3 EF, electrical interface capacity of one, or DS3 DTT, the customer's Pricing Plan fixed period is available in thirty-six (36) and sixty (60) month increments.
- DS3 EF electrical or optical interface capacities of two or greater can only be ordered and provisioned from Section 7, following. The Switched Access Service rate for the Electrical or Optical Entrance Facility as set forth in 6.8.1, following, is for the billing of Shared Use only. Shared use regulations for Pricing Plans are set forth in B., following.
- For Switched Transport CO Multiplexing requested at the same time as its associated EF or DTT facility, the multiplexing Pricing Plan fixed period must be equal to the associated EF or DTT fixed period or less than the associated EF or DTT fixed period, respectively. If Switched Transport CO Multiplexing is ordered subsequent to the EF or DTT facility, the multiplexing feature will be assessed only on a month-to-month basis.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.15 SWITCHED TRANSPORT PRICING PLANS

A. Switched Transport DS1 and DS3 Pricing Plans (Cont'd)

No Company-initiated increases to Pricing Plan monthly rates shall occur during the customer's fixed period. Effective September 1, 1998, customers establishing a Pricing Plan will not receive a rate decrease if the Company decreases rates during the term of the plan. Pricing Plans established on or before August 31, 1998, will automatically receive a rate decrease if the Company decreases rates during the term of the plan.

At the end of a Pricing Plan fixed period, the customer may convert to month-to-month rates or subscribe to a new Pricing Plan fixed period. The new Pricing Plan monthly rates will be adjusted to those in effect at the time of the new Pricing Plan fixed period. Should the customer not make a choice by the end of a Pricing Plan fixed period, the Company will automatically revert the customer to current month-to-month rates.

The Termination Liability and Waiver Policy as set forth in C. and D., following, will be in effect for all customers subscribing to a Switched Transport Pricing Plan. When Switched Transport is provided in conjunction with a PLTS facility, the PLTS Termination Liability and Waiver Policy as set forth in 7.1.8, following, shall be in effect. When PLTS Termination Liability charges are appropriate, Switched Transport Termination Liability charges are not assessed.

Switched Transport DS1 or DS3 Pricing Plans may be converted to Partnership Program as set forth in 6.7.17, following.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.15 SWITCHED TRANSPORT PRICING PLANS (Cont'd)****B. Pricing Plan Shared Use Regulations**

When the customer's Switched Access Service is provided on a portion of the capacity of a PLTS facility under a PLTS Pricing Plan, the Shared Use billing will be apportioned as described in 2.7, preceding. The following conditions are in addition to the Shared Use regulations.

Pricing Plans established for PLTS are not always available for Switched Services in all states. Pricing Plans are applicable in the states of AZ, CO, IA, MN, NE, NM, OR, UT and WA when the PLTS and Switched Services fixed periods are the same. Pricing Plans are not available for DID Service. When the customer has an existing PLTS Pricing Plan in a state where Switched Transport Pricing Plans are not available, the appropriate non-plan (month-to-month) Switched Transport rate element shall be apportioned in lieu of a Pricing Plan rate.

The Company shall bill Switched Transport Pricing Plan rate elements at the same capacity level as the PLTS Pricing Plan rate elements for the same duration of time remaining on the Shared Use PLTS Pricing Plan fixed period. When Switched Transport rate elements at the same capacity level (e.g., SRS) are not available, the Company shall utilize a Switched DS3 Pricing Plan rate element for the billing of Switched Access.

When a customer requests the PLTS DS1/DS3 Regional Commitment Program (RCP) for DS3 Service, any shared use DS3 rate elements must be billed the month-to-month rate. DS3 customers establishing a new DS3 RCP with shared use switched EFs established prior to April 4, 2002, may retain any existing Section 6 Pricing Plan on the EFs until the existing Plan expires.

All other exceptions are described under the Shared Use regulations as described in 2.7, preceding.

The Switched Transport Pricing Plan minimum period will be for the same duration of remaining months on the Shared Use PLTS Pricing Plan fixed period.

When the customer migrates Switched Access Service to a Shared Use PLTS facility, the Company shall establish the Switched Access rate elements using current pricing plan tariff rates in effect at the time the request is completed.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.15 SWITCHED TRANSPORT PRICING PLANS

B. Pricing Plan Shared Use Regulations (Cont'd)

In the event the customer discontinues the PLTS Pricing Plan and the PLTS facilities remain in-service, the Company will discontinue the Switched Transport Pricing Plan. The Company will revert the Switched Transport rate elements to current month-to-month billing.

When Switched Transport is provided in conjunction with a PLTS facility, the PLTS Termination Liability and Waiver Policy as set forth in 7.1.8, following, shall be in effect. When PLTS Termination Liability charges are appropriate, Switched Transport Termination Liability charges are not assessed.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.15 SWITCHED TRANSPORT PRICING PLANS (Cont'd)

C. Switched Transport Pricing Plan Termination Liability[1]

The Termination Liability Policy provides the liability terms and conditions for customers subscribing to Switched Transport Pricing Plans.

If a customer chooses to discontinue the entire Pricing Plan service or a portion of the services in a Pricing Plan, termination charges apply (unless the customer satisfies the conditions specified in the Waiver Policy as set forth in D., following).

Termination charges are determined based on the status of the twelve (12) month Pricing Plan minimum period requirement as set forth following:

- Should the customer choose to discontinue the Pricing Plan prior to completion of the twelve (12) month minimum period, termination charges equal to one-hundred percent (100%) of the total Pricing Plan monthly charges for the remaining months of the minimum period apply. In addition to the 100% minimum period termination charge, forty percent (40%) for a DS1 Pricing Plan or seventy percent (70%) for a DS3 Pricing Plan based on the total current tariff Pricing Plan monthly rates will apply for the remaining portion of the Pricing Plan fixed period. For example, if a customer discontinues after completing 8 months of a 36 month Pricing Plan, the termination charge will be the total Pricing Plan monthly charges multiplied by 100% for the remaining 4 months of the minimum period requirement then, the total Pricing Plan monthly charge based on current tariff rates is multiplied by either 40% or 70% for the remaining 24 months of the fixed period.
- Should the customer choose to discontinue the Pricing Plan after the completion of the twelve (12) month minimum period, termination charges equal to 40% for a DS1 Pricing Plan or 70% for a DS3 Pricing Plan based on the total current tariff Pricing Plan monthly rates will apply for the remaining portion of the Pricing Plan fixed period. For example, if a customer discontinues after completing 17 months of a 36 month Pricing Plan, the termination charge will be the total Pricing Plan monthly charges based on current tariff rates multiplied by either 40% or 70%, multiplied by the remaining 19 months of the fixed period.

[1] Switched Transport DS1 or DS3 Pricing Plans in service prior to August 12, 1997, will retain the 15% Termination Liability application for the duration of the existing fixed period only.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS

6.7.15 SWITCHED TRANSPORT PRICING PLANS (Cont'd)

D. Switched Transport Pricing Plan Waiver Policy

A waiver of the Pricing Plan Termination Liability charge as set forth in C., preceding, may occur when the customer moves to a different location within the same state, upgrades to a new fixed period Pricing Plan or upgrades the Pricing Plan to DS3 capacity and the following conditions are met:

- The transport service between the customer's premises and the serving wire center and/or Hub (e.g., Switched Transport EF or PLTS Channel Termination and/or associated Switched Transport or PLTS and/or mileage multiplexing) is provided by the Company.
- The customer must agree to a new Pricing Plan for the new service and a new minimum period will apply.
- The customer must satisfy the existing Pricing Plan minimum period. Should the customer choose to discontinue the Pricing Plan fixed period service prior to completion of the minimum period, termination charges equal to one-hundred percent (100%) of the total Pricing Plan monthly charges for the remaining months of the minimum period will apply.
- The total value of the new Pricing Plan service must be equal to or greater than 115% of the remaining value of the existing Pricing Plan service (Nonrecurring charges and Special Construction charges will not be used for the Waiver calculation).
- The order to disconnect the existing Pricing Plan service and the order for the new Pricing Plan service are received by the Company at the same time and both orders must reference the application of the Switched Transport Pricing Plan Waiver Policy.
- The new fixed period must meet or exceed the fixed period being upgraded. The monthly rates will be those that are in effect at the time the service is upgraded (e.g., a 36 month fixed period may be upgraded to a new 36 month, or longer fixed period).

E. Non appropriations Clause

Termination charges do not apply to Pricing Plan fixed period services purchased by Local, State or Federal government entities or to customers who have purchased services solely for resale to Local, State or Federal government entities when the Non appropriations Clause terms and conditions, as described in 7.1.8, following, are met.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.15 SWITCHED TRANSPORT PRICING PLANS (Cont'd)****F. Pricing Plan Nonrecurring Charge Reduction****1. General[1]**

When the customer's Switched Transport is under a Switched Transport Pricing Plan (e.g., DS1 or DS3) or is provided on a PLTS Shared Use facility under a PLTS Pricing Plan (e.g., DS1 or DS3), RCP or Partnership Program, a nonrecurring charge (NRC) reduction may apply. Switched Transport nonrecurring charges associated with a thirty-six month (36) Switched Transport or Shared Use PLTS fixed period will be reduced twenty-five percent (25%) when the access order is received within 90 days of the fixed period establishment date. Switched Transport nonrecurring charges associated with a sixty month (60) Switched Transport fixed period or any fixed period of a Shared Use PLTS Pricing Plan, RCP or Partnership Program of longer duration than 36 months will be reduced fifty percent (50%) when the access order is received within 180 days of the fixed period establishment date.

For Switched Access Service ordered from Section 6, the Company will use the Switched Transport Pricing Plan establishment date as the beginning date through day 90 or day 180, respectively, to determine the NRC reduction eligibility. For Switched Access provisioned as Shared Use on PLTS Service, the Company will use the PLTS Pricing Plan establishment date as the beginning date through day 90 or day 180, respectively, to determine the NRC reduction eligibility. Nonrecurring charges on access orders received after day 90 or day 180 from the establishment date of the fixed period (i.e., Switched or PLTS) will not be reduced.

An NRC reduction may be applied to Switched Access Service work activities for installation of service, service rearrangements, rollovers and moves. Nonrecurring charges for work activities performed at the line group, trunk group, end office or tandem level or for 500 Access Service (6.8.2.F), 900 Access Service (6.8.6), Dedicated Network Access Link (6.8.1.G), Direct Inward Dial (6.8.2.C), Switched Data Service (6.8.7) and CCSAC (20.8) are not eligible for a NRC reduction.

In addition to the conditions described preceding, Switched Access Service nonrecurring charges, as set forth in 6.8, following, will be reduced when the conditions in 2. through 4., following, are met.

[1] The Switched Transport Pricing Plan NRC reduction is applicable in the states of AZ, CO, IA, MN, NE, NM, OR, UT and WA.

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.15 SWITCHED TRANSPORT PRICING PLANS**

F. Pricing Plan Nonrecurring Charge Reduction (Cont'd)

2. Line or Trunk Work Activity

When the Switched Access Service work activity is at the line or trunk level for installation of service, service rearrangements, rollovers and moves, the customer of record for the line or trunk and the customer of record for the Company-provided facility the line or trunk is provisioned on must be the same customer. The NRC reduction eligibility is based on the following conditions:

- When the Company provisions the transport facility as one facility between the customer's premises and the Company HUB, access tandem or end office, the Company will use the customer's Switched Transport EF pricing plan fixed period or the Shared Use PLTS pricing plan fixed period between the customer's premises and the serving wire center of the customer's premises to determine the NRC reduction eligibility.
- When the Company provisions the transport facility as two facilities between the customer's premises and the Company HUB, access tandem, end office, HUB to access tandem or HUB to end office, the Company will determine the NRC reduction eligibility based on the pricing plan fixed period of the connecting facility assignment for the line or trunk. (e.g., if the DTT facility between the serving wire center and the HUB has a pricing plan, that pricing plan will be used to determine the NRC reduction eligibility for the lines or trunks on that facility. If the DTT facility does not have a pricing plan, a NRC reduction does not apply at the line or trunk level).
- When the customer has a line group or trunk group provisioned on multiple Switched Transport or Shared Use PLTS facilities between the customer's premises and the Company HUB, access tandem or end office, the Company will determine the NRC reduction eligibility based on the pricing plan fixed period of each connecting facility assignment (e.g., trunks 1-24 of a 48 member trunk group provisioned on a connecting facility assignment without a pricing plan would not be eligible for a NRC reduction while trunks 25-48 of a 48 member trunk group provisioned on another connecting facility assignment with a thirty-six or sixty month pricing plan may be eligible for a NRC reduction).

3. Facility Work Activity

When Switched Access Service work activity is at the facility level for installation of service, service rearrangements, rollovers and moves, the NRC reduction eligibility is based on the pricing plan fixed period of the facility.

6. SWITCHED ACCESS SERVICE

6.7 RATE REGULATIONS (Cont'd)

6.7.16 RESERVED FOR FUTURE USE

ACCESS SERVICE**6. SWITCHED ACCESS SERVICE****6.7 RATE REGULATIONS****6.7.17 PARTNERSHIP PROGRAM**

Switched Transport DS1 and DS3 provided on a portion of the capacity of a Shared Use PLTS facility are included in the Partnership Program when the PLTS facility has been enrolled in a Partnership Program. At the customer's option, Switched Transport DS1 and DS3 provided as non-shared (i.e., a facility provisioned as 100% Switched Transport without any PLTS provisioning) may also be included in the Partnership Program. The terms and conditions set forth in 7.1.3, following, and the conditions described below must be met in order for Switched Transport DS1 and DS3 rate elements to be included under the Partnership Program:

- Interconnectors have taken either 100 DS1-equivalent cross-connects for the transmission of Switched Access traffic in Zone 1 offices in a state or have taken an average of 25 DS1-equivalent cross-connects for the transmission of Switched Access traffic per Zone 1 office in a state.[1]
- The Switched Transport DS1 and DS3 rate elements will bill as month-to-month rate elements for the same duration of time remaining on the Partnership Program fixed period.
- The Switched Transport DS1 and DS3 rate elements will have the same minimum period as remaining on the Partnership Program.
- The Switched Transport DS1 and DS3 rate elements can not participate in any other pricing plan option or STCP in the same LATA as the Partnership Program except as set forth in 7.1.3, following.
- A Nonrecurring Charge Reduction for Pricing Plans as set forth in 6.7.15.F., preceding, is available to customers when Switched Access is associated with the customer's Partnership Program.

[1] Partnership Program is available for Switched Access Service in the states of AZ, CO, IA, MN, NE, NM, OR, UT and WA.

3. End Office Dedicated Trunk Port,[2] Per Trunk	P4Twx
	\$3.00 (R)

[1] *DID* available only in ID (Spokane LATA), OR, WA.

[2] The End Office Dedicated Trunk Port rate was calculated based upon a 50/50 split between originating and terminating traffic using this flat-rated port. The FCC in their FCC 11-161 ICC Transformation order in section 51.907(d)(1) allowed Price Cap Carriers to use an equal split to divide the charge between originating and terminating elements. When the terminating portion of the rate is reduced and then combined with the originating portion of the rate a single flat rate is generated for billing purposes. The Originating portion of the charge is \$3.00.

[1] MF Signaling or SS7 Out of Band Signaling.

[2] This flat rated charge was calculated based upon a 50/50 split between originating and terminating. The FCC in their FCC 11-161 ICC Transformation order in section 51.907(d)(1) allowed Price Cap Carriers to use an equal split to divide the charge between originating and terminating elements. When the terminating portion of the rate is reduced and then combined with the originating portion of the rate, a single flat rate is generated for billing purposes. (N)

[3] Nonrecurring charges apply on subsequent orders only. (T)

[4] Nonrecurring charges apply only to customer's ordering Flexible ANI for purposes other than determination of payphone compensation to Payphone Service Providers (T)
