

## ACCESS SERVICE

7 Special Access Service (Cont.)7.2 Rate Regulations (Cont.)7.2.7 Mixed Use Analog and Digital High Capacity Services (Cont.)

When Special Access Service is provided utilizing a channel of the mixed use facility to a hub, High Capacity rates and charges will apply for the facility to the hub, as set forth preceding, and individual service rates and charges will apply from the hub to the customer designated premises. The rates and charges that will apply to the portion from the hub to the customer designated premises will be dependent on the specific type of Special Access Service that is provided (e.g., Voice Grade, etc.). The applicable rates and charges will include a Non-Competitive End User Channel Termination if applicable. Rates and charges for optional features and functions associated with the service, if any, will apply for the appropriate channel type.

As each block of channels is activated for Switched Access Service, the High Capacity Special Access Non-Competitive End User Channel Termination rates will be reduced accordingly. Blocks may be ordered in groups of 12 channels for DS1 service and groups of 168 channels for DS3 service.

Switched Access Service rates and charges, as set forth in 17.2 following, will apply for each block of channels of the standard use facility that is used to provide a Switched Access Service. Additionally, the Switched Access Service Entrance Facility, Direct Trunked Transport, and Multiplexing charges, if applicable, will be reduced by multiplying their respective rates by the ratio of derived Switched Access Service blocks of channels to the total number of Voice Grade block of channels that can be derived.

The customer must place an order for each block of individual Switched Access Service or Special Access Non-Competitive End User Channel Terminations utilizing the Mixed Use Facilities and specify the block assignment for each such service.
