14. Centralized Equal Access Serving Wire Center14.1 General

This section lists those Telephone Companies that provide FGD service within a Centralized Equal Access ("CEA") tandem network. Also, those locations for which the Telephone Company has designated the service wire center(s) and/or an interconnection point(s) for a CEA tandem network are shown below. The following locations are listed by state. Local Transport charges will be calculated based on regulations set forth in Section 6 preceding. When a customer connects to a CEA tandem network at an interconnection point that is not designated as a serving wire center, Local Transport mileage will be measured to the designated serving wire center for that interconnection point, as set forth below. Serving wire centers, CEA access tandems and subtending end offices and the associated V & H coordinates are found in the National Exchange Carrier Association Tariff FCC No. 4.
