ACCESS SERVICE13. Additional Engineering, Additional Labor and Miscellaneous Services (Cont'd)13.3 Miscellaneous Services (Cont'd)13.3.2 Maintenance of Service

(A) When a customer reports a trouble to the Company for clearance and no trouble is found in the Company's facilities, the customer shall be responsible for payment of a Maintenance of Service charge as set forth in the Rate Sections, beginning in Section 16, following for the period of time from when Company personnel are dispatched, at the request of the customer, to the customer designated premises to when the work is completed. Failure of Company personnel to find trouble in Company facilities will result in no charge if the trouble is actually in those facilities, but not discovered at the time.

(B) the customer shall be responsible for payment of a Maintenance of Service charge when the Company dispatches personnel to the customer designated premises, and the trouble is in equipment or communications systems provided by other than the Company or detariffed CPE provided by the Company.

In either (A) or (B) preceding, no credit allowance will be applicable for the interruption involved if the Maintenance of Service Charge applies.

13.3.3 Telecommunications Service Priority - TSP

Priority installation and/or restoration of National Security Emergency Preparedness (NSEP) telecommunications services shall be provided in accordance with part 64.401, Appendix A, of the Federal Communication Commission's (FCC's) Rules and Regulations.

In addition, TSP System service shall be provided in accordance with the guidelines set forth in "Telecommunications Service Priority (TSP) System for National Security Emergency Preparedness (NSEP) Service Vendor Handbook" (NCSH 3/1/2) dated July 9, 1990, and "Telecommunications Service Priority System for National Security Emergency Preparedness Service User manual (NCSM 3-1-1).

The TSP System is a service, developed to meet the requirements of the Federal Government, as specified in the Service Vendor's Handbook and Service User's Manual which provides the regulatory, administrative and operational framework for the priority installation and/or restoration of NSEP telecommunications services. This includes Switched Access Services. D
The TSP System applies only to NSEP telecommunications services and requires and authorizes priority action by the Company providing such services.

For Switched Access Service, the TSP System's applicability is limited to those services which the Company can discreetly identify for priority provisioning and/or restoration.

ACCESS SERVICE13. Additional Engineering, Additional Labor and Miscellaneous Services (Cont'd)13.3 Miscellaneous Services (Cont'd)13.3.3 Telecommunications Service Priority - TSP (Cont'd)

Additionally, a Miscellaneous Service Order Charge as set forth in the Rate Sections, beginning in Section 16, will apply to TSP requests that are ordered subsequent to the initial installation of the associated access service.

A TSP charge does not apply when a TSP is discontinued or when ordered coincident with an Access Order to install or change service. In addition, Additional Labor rates as set forth in the Rate Sections, beginning in Section 16, may be applicable when provisioning or restoring Switched Access Services with TSP.

D

When the customer requests an audit or a reconciliation of the Company's TSP records, a Miscellaneous Service Order Charge as set forth in the Rate Sections, beginning in Section 16, and Additional Labor rates as set forth in the Rate Sections, beginning in Section 16, are applicable.

13.3.4 Bill Name and Address Information

The term "telecommunications service providers" as used in this provision includes interexchange carriers, operator service providers, enhanced service providers and other providers of interstate telecommunications services. Telecommunications service providers may request Billing Name and Address (BNA) information of the Company or the Company's billing agent for a specifically stated Billed Telephone Number (BTN).

D

ACCESS SERVICE**14. Access Service Interface and Transmission Specifications**

14.1 contains Switched Access Service Options (which are comprised of Interface Groups, Supervisory Signaling, Entry Switch Receive level and Local Transport Termination) and Transmission Specifications. 14.3 contains Interface Group, Premises Interface Code and Standard Transmission Specifications applicable to Directory Access Service.

D
D

14.1 Switched Access Service

Ten Interface Groups are provided for terminating the Local Transport Entrance Facility at the customer's designated premises. Each Interface Group provides a specified premises interface (e.g., two-wire, four-wire, DS1, etc.). Where transmission facilities permit, and at the option of the customer, the Entrance Facility may be provided with optional features as set forth in 14.1.1 following.

As a result of the customer's access order and the type of Company transport facilities serving the customer designated premises, the need for signaling conversions or two-wire to four-wire conversions, or the need to terminate digital or high frequency facilities in channel bank equipment may require that Company equipment be placed at the customer designated premises. For example, if a voice frequency interface is ordered by the customer and the Company facilities serving the customer designated premises are digital, then Company channel bank equipment must be placed at the customer designated premises in order to provide the voice frequency interface ordered by the customer.

14.1.1 Local Transport Interface Groups

Interface Groups are combination of technical parameters which describe the Company handoff at the point of termination at the customer designated premises. The technical specifications concerning the available interface groups are set forth in (A) through (D) following.

Interface Group 1 is provided with Type C Transmission Specifications, as set forth in 14.1.2(C) following, and Interface Groups 2 through 10 are provided with Type A or B Transmission Specifications, as set forth respectively in 14.1.2(D) and (E) following, depending on the Feature Group and whether the Access Service is routed directly or through an access tandem. All Interface Groups are provided with Data Transmission Parameters.

Only certain premises interfaces are available at the customer designated premises. The premises interfaces associated with the Interface Groups may vary among Feature Groups.

(3) Impulse Noise Counts: The Impulse Noise counts exceeding a 67 dBnCO threshold in 15 minutes is no more than 15 counts.

(4) Intermodulation Distortion: The Second Order (R2) and Third Order (R3) Intermodulation Distortion products are equal to or greater than:

Second Order (R2)	31 dB
Third Order (R3)	34 dB

(5) Phase Jitter: The Phase Jitter over the 4-300 Hz frequency band is less than or equal to 70 peak-to-peak.
