ACCESS SERVICE**2. GENERAL REGULATIONS (Continued)****2.6 Definitions**

Certain terms used herein are defined as follows:

800 Series

The term 800 series denotes the service access codes of 800, 888, 877, 866, 855, 844, 833, and 822.

Access Code

The term "Access Code", with an Abbreviated Dial Arrangement (ADA), denotes a uniform access code assigned by the Telephone Company to an individual customer in the form 10XXX or 101XXXX and 950-XXXX.

Access Minutes

For the purpose of calculating chargeable usage, the term "Access Minutes" denotes customer usage of exchange facilities in the provision of interstate or foreign service. On the originating end of an interstate or foreign call, usage is measured from the time the originating end user's call is delivered by the Telephone Company to and acknowledged as received by the customer's facilities connected with the originating exchange. On the terminating end of an interstate or foreign call, usage is measured from the time the call is received by the end user in the terminating exchange. Timing of usage at both originating and terminating ends of an interstate or foreign call shall terminate when the calling or called party disconnects, whichever event is recognized first in the originating and terminating exchanges, as applicable.

Access Order

An order used by the customer to request Access related services.

Access Tandem

The term "Access Tandem" denotes a Telephone Company or centralized equal access provider switching system that provides a concentration and distribution function for originating or terminating traffic between end offices and a customer designated premises.

(M)-Material now appears on Page 2-83 of this Section.

ACCESS SERVICE**2. GENERAL REGULATIONS (Continued)****2.6 Definitions (Continued)****Installation and Repair Technician**

The term "Installation and Repair Technician" denotes a Telephone Company employee who performs installation and/or repair work, including testing and trouble isolation, outside of the Telephone Company Central Office and generally at the customer designated premises.

Interexchange Carrier (IC) or Interexchange Common Carrier

The terms "Interexchange Carrier" (IC) or "Interexchange Common Carrier" denotes any individual, partnership, association, joint-stock company, trust, governmental entity or corporation engaged for hire in interstate or foreign communication by wire or radio, between two or more exchanges.

Intermediate Hub

See Facility Hub.

Intermodulation Distortion

The term "Intermodulation Distortion" denotes a measure of the nonlinearity of a channel. It is measured using four tones, and evaluating the ratios (in dB) of the transmitted composite four-tone signal power to the second-order products of the tones (R2), and the third-order products of the tones (R3).

Interstate Communications

The term "Interstate Communications" denotes both interstate and foreign communications.

Intrastate Communications

The term "Intrastate Communications" denotes any communications within a state subject to oversight by a state regulatory commission as provided by the laws of the state involved.

Joint Tandem Switched Transport

The term "Joint Tandem Switched Transport" denotes the rate element assessable for the transmission of originating toll free minutes. The rate element includes both the transport between the end office and the tandem switch and the tandem switching. It does not include the transport of the traffic over dedicated transport facilities between the serving wire center and the tandem switching office.

(N)

(N)

ACCESS SERVICE**2. GENERAL REGULATIONS (Continued)****2.6 Definitions (Continued)****Synchronous Test Line**

The term "Synchronous Test Line" denotes an arrangement in an end office which performs marginal operational tests of supervisory and ring-tripping functions.

Tandem Switched Transport

The term "Tandem Switched Transport" denotes transport from the serving wire center to the end office, or from the tandem to the end office, that is switched at a tandem.

Terminating Direction

The term "Terminating Direction" denotes the use of Access Service for the completion of calls from an IC premises to an End User Premises.

Throughput

The term "Throughput" denotes the number of data bits successfully transferred in one direction per unit of time.

Toll Free Data Base Access Service

The term "Toll Free Data Base Access Service" denotes a service which uses a data base system to identify toll free access customers on a 10-digit basis. For purposes of administering the rules and regulations set forth in this tariff regarding the provision of Toll Free Database Access, except where otherwise specified, Toll Free Database Access Service shall include the following service access codes 800, 888, 877, 866, 855, 844, 833, and 822.

(M) (T)
|
(T)
(T)
(T)
(T)
(M)

Transmission Measuring (105 Type) Test Line/Responder

The term "Transmission Measuring (105 Type) Test Line/ Responder" denotes an arrangement in an end office which provides far-end access to a responder and permits two-way loss and noise measurements to be made on trunks from a near end office.

Transmission Path

The term "Transmission Path" denotes an electrical path capable of transmitting signals within the range of the service offering, e.g., a voice grade transmission path is capable of transmitting voice frequencies within the approximate range of 300 to 3000 Hz. A transmission path is comprised of physical or derived facilities consisting of any form or configuration of plant typically used in the telecommunications industry.

Trunk

The term "Trunk" denotes a communications path connecting two switching systems in a network, used in the establishment of an end-to-end connection.

(M)-Material previously appeared on Sheet 2-62 of this Section.

ACCESS SERVICE

6. Switched Access Service (Continued)6.2 Description and Provision of Feature Group C (FGC) (Continued)6.2.1(A) Measuring Access Minutes

Customer traffic to end offices will be measured (i.e., recorded) by the Telephone Company at end office switches or access tandem switches. Originating and terminating calls will be measured or imputed by the Telephone Company to determine the basis for computing chargeable access minutes. In the event the customer message detail is not available because the Telephone Company lost or damaged tapes or incurred recording system outages, the Telephone Company will estimate the volume of lost customer access minutes of use based on previously known values.

For terminating calls over FGC when measurement capability exists, the measured minutes are the chargeable access minutes. For originating calls over FGC, chargeable originating access minutes are derived from recorded minutes in the following manner:

Step 1: Obtain recorded originating minutes and messages from the appropriate recording data.

Step 2: Obtain the total attempts by dividing the originating measured messages by the completion ratio. Completion ratios (CR) are obtained separately for the major call categories such as DDD, operator, toll free series, 900, directory assistance and international from a sample study which analyzes the ultimate completion status of the total attempts which receive acknowledgment from the customer. That is, Measured Messages divided by Completion Ratio equals Total Attempts.

(T)

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE (Cont'd)6.2 Provision and Description of Switched Access Service Arrangements (Cont'd)6.2.4 Switched Access Service Categories (Cont'd)6.2.4(A) Local Transport (Cont'd)6.2.4 (A)3 Tandem Switched Transport

Tandem Switched Transport is associated with the communications path between a tandem and an end office on circuits that are switched at a tandem switch, or between a host and a remote switch.

In those instances where an SSP equipped end office is capable of handling 800 SAC Traffic on a direct trunked basis but incapable of handling 888 SAC traffic on a direct trunked basis, a full credit will be provided for Tandem Switched Transport Charges associated with FGC and FGD service for 888 SAC traffic delivered at the tandem.

This results in all 800 series traffic being rated as direct trunked transport regardless of whether the SSP equipped end office is capable of handling 888 SAC traffic on a direct trunked basis. Those SSP equipped end offices that cannot accommodate direct trunking of originating 888 SAC traffic are identified in NECA Tariff F.C.C. No. 4, Wire Center Information.

ACCESS SERVICE

6. SWITCHED ACCESS SERVICE (Continued)6.2 Provision and Description of Switched Access Service Arrangements (Continued)6.2.4 Switched Access Service Categories (Continued)6.2.4 (C) Chargeable Optional Features (Continued)6.2.4.(C)1 Toll Free Series Data Base Access Service (T)

Toll Free Series Data Base Access Service is provided to all customers in conjunction with FGC and FGD switched access service. When a 1+800+NXX-XXXX call is originated by an end user, the Telephone Company will utilize the Signaling System 7 (SS7) network to query a toll free series data base to identify the customer to whom the call will be delivered and provide vertical features based on the dialed ten digits. The call will then be routed to the identified customer over FGC or FGD switched access. (T)

A Basic or Premium Feature Query charge, as set forth in the Rates and Charges Section of this tariff, is assessed for each query launched to the data base which identifies the customer to whom the call will be delivered. The Basic Query provides the identification of the customer to whom the call will be delivered and includes area of service routing which allows routing of toll free series type calls by telephone companies to different inter-exchange carriers based on the Local Access Transport Area (LATA) in which the call originates. The Premium Feature Query provides the same customer identification as the basic query and vertical features which may include: (1) call validation, (ensuring that calls originate from subscribed service areas); (2) POTS translation of toll free series numbers; (3) alternate POTS translation (which allows subscribers to vary the routing of toll free series type calls based on factors such as time of day, place or origination of the call, etc.); and (4) multiple carrier routing (which allows subscribers to route to different carriers based on factors similar to those in (3). (T)

 Issued: July 14, 2021

 Effective: July 15, 2021

ACCESS SERVICE15. Rates and Charges – TDS Metrocom (Continued)15.2 End User Access Service

Regulations concerning End User Access Service are set forth in Section 4 proceeding.

(A) The rates for End User Common Line are:

	<u>Rate Per Month</u>	
(1) Primary Residence		
- Individual line or trunk, each		
State of Wisconsin		
- Appleton, New Berlin, Madison & Stoughton Market Areas	\$6.50	
- Middleton Market Area	6.50	
- Fitchburg Central, Monona, Sun Prairie, Cottage Grove, McFarland, Merrimac, Oregon, Portage, Sauk City, Baraboo, DeForest/Windsor, Witwen, Stevens Point, Wausau, Neenah, Kaukauna, Little Chute, Sheboygan Falls, & Lodi Market Areas	No Charge	(T) (T)
