

THE CHILlicoTHE TELEPHONE COMPANY INTERSTATE ACCESS TARIFF REVISIONS

August 29, 2002

DESCRIPTION AND JUSTIFICATION

The Chillicothe Telephone Company (Chillicothe), submits the accompanying access tariff revisions to the Access Service Tariff FCC No. 1 to adjust Asymmetrical Digital Subscriber Line rates in Section 8.

Asymmetrical Digital Subscriber Line

Asymmetric Digital Subscriber Line (ADSL) Access Service enables data traffic generated by the customer's equipment to be transported to a DSL Access Service Connection Point using the customer's local exchange service facilities. The basic service packages, per line, include service for 384Kbps, 768 Kbps, and 1.5Mbps downstream speeds. The monthly rates are based on market sensitive pricing and are being adjusted to reflect the current market conditions. The market based cost support for the monthly recurring charge is in Exhibit 1. The new nonrecurring rate calculation for DSL Network Reconfiguration is in Exhibit 2.
