8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL

Advanced Communications Networks (ACS) consist of the Public Packet Switching Network (PPSN), Frame Relay Service (FRS), *QWEST DSL* Service, ATM Service and LAN Switching Service (LSS).

(T)

8.1.1 SPECIAL CONSTRUCTION

FRS and ATM Service will be available at Company Service Point locations. The offering of FRS, *QWEST DSL* Service, ATM Service and LSS contemplates the use of existing facilities. There may be occasions when the service is not available due to facility limitations, or where it may be necessary to construct such facilities as either normal or Special Construction. If Special Construction is involved, the regulations as set forth in Tariff F.C.C. No. 2 apply.

(T)

(T)

8.1.2 ORDER MODIFICATIONS

PPSN, FRS, *QWEST DSL* Service, ATM Service and LSS are ordered under the Access Order provisions as set forth in Section 5, preceding.

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL

(T)(M)

8.1.3 MOVES (Cont'd)

(T)

A move involves a change in the physical location of one of the following:

- The network interface at the customer's premises
- The customer's premises

The charges for the move are dependent upon whether the move is to a new location within the same building or to a different building.

A. Moves Within the Same Building

(T)

When the move is to a new location within the same building, the charge for the move will be an amount equal to one-half of the nonrecurring charge for the service termination affected. There will be no change in the minimum period requirements.

B. Moves to a Different Building

(T)

Moves to a different building will be treated as a discontinuance and start of service and all associated nonrecurring charges will apply. New minimum period requirements will be established for the moved services. The customer will also remain responsible for satisfying all outstanding minimum period charges for the discontinued service. Moves to a different building for FRS customers may be eligible for portability, as described in 8.3.4.F., following.

(T)

As of May 29, 1995 moves to a different building with an upgrade in transmission speed for customers subscribing to pricing plans in this Section will be subject to the Termination Liability and Waiver Plan as set forth in 8.1.5. FRS customers who subscribe to Pricing Plans in effective as of November 14, 1994 and who move to a different building, may be eligible for the phased-in installation rates and charges regulations as set forth in 8.3.4.B., following.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL (Cont'd)

8.1.4 CHANGES OF SERVICE

The following rearrangements and changes apply to Frame Relay Service (FRS), *QWEST DSL* Service, and ATM Service.

(T)

A. Service Rearrangements

Service rearrangements are changes to existing service which do not result in a change in the physical location of the network interface. Changes in the physical location of the network interface are treated as moves as described in 8.3.2.A.

1. For additions to existing service, nonrecurring charges associated with the added service element will apply.
2. Related monthly rates and nonrecurring charges for addition(s) to service are the rates and charges in effect at the time of the addition(s).
3. With the exception of PVCs, VCCs, and VPCs, an addendum to the existing fixed period plan is required when service elements are added to an existing fixed period plan. PVCs, VCCs, and VPCs may be added to existing fixed period plans on a month-to-month basis without an addendum to the existing fixed period plan.
4. When PVCs are added to an existing FRS, or VCCs or VPCs are added to an existing ATM Service, the minimum period is one month.
5. A subsequent PVC, VCC or VPC order charge, as set forth in 8.3.2.A. and 8.5.2.A. will apply to add or change PVC, VCC or VPC assignments.

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL

8.1.4 CHANGES OF SERVICE (Cont'd)

B. Administrative Changes

Administrative changes to existing service will be made without charge(s) to the customer. Administrative changes are as follows:

- Change of customer name; i.e., the customer of record does not change but rather the customer of record changes its name; e.g., XYZ Company to XYZ Communications,
- Change of customer premises address when the change of address is not a result of a physical relocation of facilities,
- Change in billing data (name, address, or contact name or telephone number),
- Change of customer contact name or telephone number,
- Change of customer service element identification, and
- Change in jurisdiction for FRS, *QWEST DSL* Service and ATM Service.

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL (Cont'd)

(T)(M)

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

(T)

A. General

Termination Liability and Waiver Policy provides the terms and conditions for customers subscribing to Pricing Plans as set forth in each Pricing Plan. As of May 29, 1995 new customers subscribing to ACS Pricing Plans are subject to the Termination Liability and Waiver Policy terms and conditions in lieu of the Discontinuance Charges, Portability (except for FRS Portability without upgrade in transmission speed, as set forth in 8.3.4.F.) and Upgrades in Service and Transmission Speed as set forth in the Pricing Plans. Customers with Pricing Plans in service prior to May 29, 1995 may utilize the terms and conditions of their pricing plans and portability or the Termination Liability and Waiver Policy. This offer is valid until either the expiration date of their existing term or until the expiration of the respective terms, as set forth in the pricing plans, whichever comes first.

(T)

(T)

(T)

(T)

If the customer chooses to discontinue all or a portion of the service prior to the expiration of the fixed period, termination charges, as set forth in B., following, will apply.

(M)

Certain material on this page formerly appeared on Page 8-103.
Certain material previously found on this page can now be found on Page 8-44.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY (Cont'd)

B. Termination Liability

Customers with Pricing Plans in service prior to August 12, 1997, will retain a Termination Liability of 15% and the minimum billing level requirement of 80% of the total monthly rates for the service, until the expiration of their existing fixed period.

If a customer chooses to discontinue the entire service or a portion of the service prior to the expiration of the fixed period service, termination charges apply (unless the customer satisfies the conditions specified in the Waiver Policy as set forth in C., following).

The minimum billing level is used to calculate the termination charge. The minimum billing level for Packet Switching, MAS, *QWEST DSL* Service (i.e., *QWEST DSL*, *QWEST IDSL* or *QWEST DSL HOST*) and LSS is 100% of the total monthly rates for the rate elements being discontinued. An exception for *QWEST IDSL* exists when this service is upgraded to *QWEST DSL* at the same address of record, the termination charge does not apply. The minimum billing levels for Frame Relay and ATM Service are as follows:

(T)

1. Frame Relay

a. Standard Minimum Billing Level

The Standard Minimum Billing Level (SMBL) for Frame Relay is 100% of the monthly rates for the rate elements being discontinued, except for the FRS User-To-Network Information Transfer (UNIT) or Network-To-Network Information Transfer (NNIT). The minimum billing level for the UNIT or NNIT is 100% of the monthly rate for a UNIT or NNIT with 1 PVC, based on the customer's existing fixed period service rate plan and the speed of the associated UNIT or NNIT.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B.1. (Cont'd)

b. Optional Minimum Billing Level

The Optional Minimum Billing Level (OMBL) for Frame Relay Service (FRS) is a plan that gives eligible customers the flexibility to remove and add circuits within Company territory without incurring a Termination Liability Assessment (TLA) as long as they stay at or above their TLA threshold level. Eligible customers who subscribe to this option must designate at the time they subscribe to a fixed period service rate plan which of their FRS recurring revenue will be part of OMBL and which will remain on SMBL. As new FRS is installed, the customer must determine whether to include the new service in the OMBL or SMBL.

A customer may have two or more OMBL fixed period service rate plans in effect at the same time.

• **Eligibility Requirements:**

- Must have an annual projected FRS revenue of \$100,000 or more that will be committed to each OMBL fixed period service rate plan at the time it is established. Determination of the revenue commitment for the first year will be calculated by multiplying the customer's current month FRS revenue by 12.
- Must subscribe to a fixed period service rate plan of 36 months or greater for the OMBL FRS and its designated circuits.

(T)(M)
(T)

(M)

Certain material previously found on this page can now be found on Page 8-46.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B.1.b. (Cont'd)

• Terms and Conditions:

- Only FRS recurring (whole and partial month) revenues and associated adjustments of these amounts will be used to calculate the annual revenue commitment.
- The FRS Minimum Service Period (MSP) as set forth in 8.3.4.B., preceding, applies. The MSP starts with the installation date of each circuit. Should the customer disconnect the circuit prior to the completion of the MSP of six months (PVCs excepted), TLA will apply to the months remaining in the MSP. TLA will not apply beyond the initial six month period.
- All new circuits added will be co-terminous with the termination date of the OMBL fixed period service rate plan with which they are associated.

(T)(M)

Issued: November 21, 2000

Effective: December 6, 2000

1801 California Street, Denver, Colorado 80202

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B.1.b. (Cont'd)

- **TLA Threshold**

The threshold amount will be determined as follows:

- In the first year of the fixed period service rate plan, the threshold will be 80% of the customer's revenue commitment at the time the OMBL fixed period service rate plan is established.
- For subsequent years of the fixed period service rate plan, the threshold level will be 80% of the previous year's actual revenue, or the threshold of the previous year, whichever is greater.
- For any year the customer's actual revenue falls below the threshold the TLA threshold for the next year will become 80% of the previous year's actual revenue.

- **Annual Verification**

The OMBL will be validated annually on the anniversary of its establishment date. When the customer's annual revenue exceeds their threshold TLA will not be assessed. When the customer's annual revenue falls below their threshold, a Shortfall Calculation will be made as follows.

(T)(M)

(T)

(T)

(M)

Certain material on this page formerly appeared on Page 8-106.
Certain material previously found on this page can now be found on Page 8-49.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B.1.b. (Cont'd)

• **Shortfall Calculation**

In the event the customer's annual revenue falls below the threshold then a TLA will be calculated as follows:

- (25%) x (Revenue Shortfall (TLA threshold – actual revenue)) x (number of years remaining in the fixed period service rate plan).
- Example: Assume a customer has an annual revenue commitment of \$200,000 and a corresponding TLA threshold of \$160,000 (80% of the annual revenue commitment). The OMBL recurring FRS revenue billed for the 3rd year of a 60 month fixed period service rate plan is \$140,000. The TLA would be calculated as follows:

$$(25\%) \times (\$20,000 (\$160,000 - \$140,000)) \times (2) = \$10,000$$

In addition, the TLA threshold for year 4 would be adjusted downward from \$160,000 (80% of \$200,000) to \$112,000 (80% of \$140,000).

(T)(M)

Certain material previously found on this page can now be found on Page 8-48.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B. Termination Liability (Cont'd)

2. Minimum Billing Level for ATM Service

(T)

The minimum billing level for ATM Service is 100% of the monthly rates for the rate elements being discontinued, except the Cell Transfer service elements. The minimum billing level for the Cell Transfer service elements is 100% of the Cell Transfer Fixed monthly rate, plus the monthly rate for a CBR, VBR-rt, VBR-nrt, ABR or UBR Incremental Cell Transfer of 64 kbps on a 1.544 Mbps port, based on the customer's existing Pricing Plan term and the speed of the associated Cell Transfer; or the monthly rate for a CBR, VBR-rt, VBR-nrt, ABR or UBR Incremental Cell Transfer of 5 Mbps of bandwidth on a 45 Mbps port, based on the customer's existing Pricing Plan term and the speed of the associated Cell Transfer; or the monthly rate for a CBR, VBR-rt, VBR-nrt, ABR or UBR ATM Rate of 15 Mbps of bandwidth on a 155 Mbps port, based on the customer's existing Pricing Plan term and the speed of the associated Cell Transfer; or the monthly rate for CBR, VBR-rt, VBR-nrt, ABR or UBR ATM Rate of 60 Mbps of bandwidth on a 622 Mbps port, based on the customer's existing Pricing Plan term and the speed of the associated Cell Transfer.

(T)

(C)

(C)

(C)

(C)

(C)

(C)

Should the customer choose to discontinue fixed period service prior to completion of the minimum service period, termination charges will apply. The termination charge is 100% of the minimum billing level for the remaining months of the minimum service period, plus 15% for Public Packet Switching, or 25% for Frame Relay, or 40% for ATM Service, *QWEST DSL* Service, LSS and MAS of the remaining portion of the fixed period service. Should the customer choose to discontinue fixed period service after the completion of the minimum period, termination charges equal to 15% for Public Packet Switching, 25% for Frame Relay, or 40% for ATM Service, *QWEST DSL* Service, LSS and MAS of the minimum billing level for the remaining portion of the fixed period service will apply. For example, if a Frame Relay customer discontinues a service including the Access Link after completing 17 months of a 36-month term, the termination charge will be the minimum billing level for the service, multiplied by 25%, multiplied by 19 months.

(T)

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B. Termination Liability

3. QWEST DSL Volume Plan

a. Basic Discount Option

The *QWEST DSL HOST* customer(s) must commit to acquiring a minimum of 15,000 active and billable *QWEST DSL* lines by the end of the 12th month of their 36 month Fixed Period Service Rate Plan. If the customer does not have a minimum of 15,000 active and billable *QWEST DSL* lines by the end of the initial 12 month period, the Company will terminate the Plan.

In the event the Company terminates the Basic Discount Option, any new orders for *QWEST DSL* Service lines placed by the customer will be charged the current month-to-month Tariff rates for the respective *QWEST DSL* Service requested. Following termination, the Company will bill 100% of the total accumulated discount credited to the customer plus a 10% surcharge.

b. Volume Commitment Options

(T)

(1) Volume Commitment Option I

(T)

The *QWEST DSL HOST* customer(s) must commit to having a designated number, between 60,001 and 400,000 of active or billable *QWEST DSL* lines by the end of their 36 month Fixed Period Service Rate Plan. The customer must acquire at least 25% of the total committed lines by the end of the first 12 months, 60% of the total committed lines by the end of 24 months, and 100% of the committed lines by the end of their 36 month Fixed Period Service Rate Plan.

• Annual Verification

The Company will annually review the number of active or billable *QWEST DSL* lines to determine whether or not the customer has reached their commitment level for that respective year as determined above. If the customer fails to meet the committed number of active or billable lines, the Company will adjust their billing as follows:

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B. Termination Liability

3.b.(1) (Cont'd)

(T)

- **Shortfall Calculation**

The customer will be billed 100% of the total accumulated discount credited plus a 10% surcharge for the year reviewed. The customer will be moved to the Basic Discount Option for the subsequent year at the appropriate percentage determined by the discount table as set forth in 8.4.5.B., following. If the 15,000 line minimum level has not been met then the customer's bill will be adjusted as set forth in 8.1.5.B.3.a., preceding.

Example: A customer has chosen the Volume Commitment Option and has committed to 100,000 lines over the 36 month Fixed Period Service Rate Plan, entitling the customer to a 14% discount on the active month-to-month *QWEST DSL* lines. The commitment would require the customer to have 25,000 active and billable lines at the end of 12 months, 60,000 active and billable lines at the end of 24 months and 100,000 lines active and billable at the end of the 36 month Fixed Period Service Rate Plan.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B. Termination Liability

3.b.(1) (Cont'd)

(T)

- The customer has 22,000 *QWEST DSL DELUXE* lines active and billable at the 12 month review. The customer has not reached the 25,000 line requirement, so they would be moved to the Basic Discount Option at a 12% discount for the subsequent year in lieu of the 14% discount associated with the 100,000 *QWEST DSL* Volume Commitment. The adjustment for month 12 would be calculated as follows:

(C)

14% of (22,000 lines X \$29.95 each = \$658,900) = \$92,246
\$92,246 + \$9,225 (10% Surcharge) =
\$101,471 for month 12

(T)

(C)

The above calculation would need to be applied to each of the previous 11 months and totaled with the 12th month to reach the annual adjustment.

(C)

- The customer has 27,000 *QWEST DSL DELUXE* lines active and billable at the 12 month review, but at the 24 month review has 57,000 active and billable lines. The first year would receive the 14% discount since the 25 % commitment level was reached. However, at the end of the 24 month review the customer would be moved to the Basic Discount Option at a 13% discount for the subsequent year in lieu of the 14 % discount associated with the 100,000 *QWEST DSL* Volume Commitment. The adjustment is only for the lines installed during the 2nd year and would be calculated as follows:

14% of (30,000 lines X \$29.95 each = \$898,500) = \$125,790
\$125,790 + \$12,579 (10% Surcharge) =
\$138,369 addition to the second year's billing

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B. Termination Liability

3.b. (Cont'd)

(2) Volume Commitment Option II

The *QWEST DSL* Volume Plan customer(s) must commit to having a designated number of active or billable *QWEST DSL* lines comprised of *QWEST DSL 256*, *QWEST DSL SELECT* and/or *QWEST DSL DELUXE* Services, as set forth below. This Volume Commitment Option II is only available on a 5-year Fixed Period Service Rate Plan. The customer must acquire a minimum of 150,000 active and billable *QWEST DSL* lines at any time during the first year of their 5-year Fixed Period Service Rate Plan. If the customer acquires the minimum of active and billable *QWEST DSL* lines at any time during the first year, there is no minimum requirement for the second year of the Fixed Period Service Rate Plan. The customer must acquire at least 200,001 active and billable *QWEST DSL* lines as of the end of the third, fourth and fifth years.

- **Annual Verification**

The Company will annually review the number of active or billable *QWEST DSL* lines to determine whether or not the customer has reached their commitment level for that respective year as determined above. If the customer fails to meet the committed number of active or billable lines, the Company will adjust their billing as follows:

(N)

(N)

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B. Termination Liability

3.b.(2) (Cont'd)

• **Shortfall Calculation**

If the customer falls short of their yearly commitment level (150,000 lines by the end of the first year, 200,001 lines as of the end of the third, fourth and fifth years), the customer shall pay an amount equal to the difference between the customer's applicable DSL commitment level and the customer's actual DSL lines multiplied by the applicable monthly rate times 12.

Example: If the customer's active and billable actual DSL lines at the Annual Verification total 195,000, 5,001 short of the 200,001 commitment level, the Shortfall Calculation will be calculated as follows:

Commitment Level of 200,001 lines minus 195,000 (actual lines) = 5,001 line shortfall. Volume Commitment Option II rate (e.g., \$24.86, *QWEST DSL DELUXE* monthly rate, or the customer's *QWEST DSL DELUXE* Fixed Period Service Rate minus 17%). 5,001 (Line Shortfall) X \$24.86 X 12 = \$1,491,898.32 Shortfall charge.

(N)

(N)

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B. Termination Liability

3.b. (Cont'd)

(3) Volume Commitment Option III

The *QWEST DSL* Volume Plan customer(s) must commit to having a designated number of active or billable *QWEST DSL* lines comprised of *QWEST DSL DELUXE* Service, as set forth below. This Volume Commitment Option III is only available on a 5-year Fixed Period Service Rate Plan. The customer must acquire a minimum of active and billable *QWEST DSL* lines as follows to be eligible for the Volume Commitment Option III:

- 120,000 lines by the end of 18 months
 - 260,000 lines by the end of 30 months
 - 400,000 lines by the end of 42 months
 - 500,000 lines by the end of 54 months
- Annual Verification

The Company will annually review the number of active or billable *QWEST DSL* lines to determine whether or not the customer has reached their commitment level for that respective year as determined above. Should the customer not reach the commitment level, they shall have an additional 180 days to make up the shortfall. If the customer fails to meet the committed number of active or billable lines within the additional 180 days, the Company will adjust their billing as follows:

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 RATE REGULATIONS

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

B. Termination Liability

3.b.(3) (Cont'd)

- **Shortfall Calculation**

If the customer falls short of their yearly commitment levels, the customer shall pay an amount equal to the difference between the customer's applicable DSL commitment level and the customer's actual DSL lines multiplied by the applicable monthly rate times 6. Any lines associated with a shortfall charges shall be recognized for future year(s) commitment levels.

Example: If the customer's active and billable actual DSL lines at the Annual Verification for 30 months, total 195,000, 65,000 short of the 260,000 commitment level, the Shortfall Calculation will be calculated as follows:

Commitment Level of 260,000 lines minus 195,000 (actual lines) = 65,000 line shortfall. Volume Commitment Option III rate (e.g., \$29.95 DSL monthly rate with 24.9% Discount = \$22.49). The formula is as follows: Volume Commitment Rate X 65,000 (Line Shortfall) X 6 = \$8,771,100 Shortfall charge.

8.1 GENERAL

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY (Cont'd)

(T)(M)

(T)

C. Waiver Policy

A waiver of the termination charge as set forth in B., preceding, may occur if the customer moves to a different building within the Company territory or migrates to another Company service or transmission speed (e.g., 56 kbps FRS to 1.544 Mbps FRS, or changes in the Access Link, UNIT or NNIT transmission speeds) provided all of the following conditions are met:

- The customer must agree to a new pricing plan for the new service, except for FRS as set forth following and in 8.3.4.B.; (T)
- The customer must satisfy the minimum service period requirement--should the customer choose to discontinue fixed period service prior to completion of the minimum service period, termination charges, as is set forth in B., preceding, will apply; (T)
- The total value of the new service must be equal to or greater than 115% the remaining value of the existing pricing plan service (nonrecurring charges and Special Construction charges will not be used towards the Waiver calculation); (T)
- The order to disconnect the existing service and the order for the new service are received by the Company at the same time and both orders must reference the application of the waiver policy; (T)
- The new service due date must be within 30 days of the due date of the disconnection of the old service, unless the installation is delayed due to Company reasons; (T)
- New minimum service period applies to the new service, except as set forth in 8.3.4.B., following. (T)
- The customer agrees to pay all outstanding recurring and nonrecurring charges (these charges will not be included in the new service pricing plan); and (T)
- Applicable nonrecurring charges apply and are the charges in effect at the time the service is changed, except as set forth in 8.3.4. (T)

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY (Cont'd)

(T)(M)
(T)

D. Nonappropriations Clause

Termination Liability and Waiver Policy does not apply to ACS Pricing Plan services purchased by local, State or Federal government entities (or to customers who have purchased services solely for resale to local, State or Federal government entities) when they are discontinued prior to the completion of the fixed period service only when all of the following conditions are met:

- The service(s) purchased by the local, State or Federal government entity or by customers that have purchased services for resale to local, State or Federal government entities are utilized solely for provision of services for that local, State or Federal government entity,
- Funding for the fixed period service ordered by the authorized local, State or Federal government entity is included in the budget request for each fiscal period appropriation sufficient to cover the authorized local, State or Federal government entity's obligations under the fixed period service for that fiscal period,
- Nonappropriation may not be used as a means of terminating the service to acquire a functionally similar product or service,
- The local, State or Federal government entity ordered the fixed period service under the good faith belief that moneys in amounts sufficient to discharge its obligations could and would lawfully be appropriated and be made available for this purpose and,

8.1 GENERAL

8.1.5 TERMINATION LIABILITY AND WAIVER POLICY

D. Nonappropriations Clause (Cont'd)

- The local, State or Federal government entity or the customer who ordered the service on their behalf, must provide the Company notarized documents agreed upon by both the Company and the customer, showing that the entity is allotted insufficient funds for the remainder of the then current fiscal period (or for a succeeding fiscal period) by appropriation, appropriation limitation or grant to continue payments under the fixed period service and has no other funding source lawfully available to it for such purpose.

The fixed period service may be terminated by giving the Company not less than 30 days written notice. Should the customer receive funding for the cancelled service prior to physical disconnect of service, the customer may cancel the disconnect order per Section 5. Upon termination, the local, State or Federal government entity or the customer who ordered the service on their behalf, shall pay all applicable rates and nonrecurring charges of the fixed period service incurred through the date of termination and through the end of the then current fiscal period to the extent of lawfully available funds.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL (Cont'd)

8.1.6 SPREAD OF NONRECURRING CHARGES

- A. Frame Relay Service, *QWEST DSL* Service, ATM Service and LSS (T)

At the customer's request, nonrecurring charges for FRS, *QWEST DSL* Service, ATM Service and/or LSS provided under the Pricing Plan may be amortized over the term of the fixed period and billed monthly. Nonrecurring charges billed in this manner (i.e., as an annuity), shall be subject to interest charges which the Company will include in each monthly installment. (T)

The Company will calculate the monthly annuity, including principal and interest, using the following Annuity from a Present Amount formula:

$$\text{Monthly Annuity} = (\text{Nonrecurring Charge}) \frac{\frac{i}{12} \left(1 + \frac{i}{12}\right)^n}{\left(1 + \frac{i}{12}\right)^n - 1}$$

In the above formula, the variable "i" is the Company's Pretax Incremental Cost of Capital rate in effect when the monthly annuity amount is calculated. The variable "n" (an exponent) is the term of the fixed period in months.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL

8.1.6 SPREAD OF NONRECURRING CHARGES

A. Frame Relay Service, *QWEST DSL* Service, ATM Service and LSS (Cont'd) (T)

If the customer discontinues FRS, ATM Service and/or LSS, changes to a lower speed service, moves or upgrades service, prior to the completion of the fixed period, the total remaining unpaid monthly annuity payments for the recovery of the nonrecurring charge must be paid immediately as a one-time charge. The Company will calculate this one-time charge using the following Present Value of an Annuity formula: (T)

$$\text{One-time Charge} = (\text{Monthly Annuity}) \frac{\left(1 + \frac{i}{12}\right)^n - 1}{\frac{i}{12} \left(1 + \frac{i}{12}\right)^n}$$

In the formula directly above, the variable "i" is the Company's Pretax Incremental Cost of Capital in effect when the one-time charge amount is calculated. The variable "n" (an exponent) is the total number of remaining unpaid monthly annuity payments.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL (Cont'd)

8.1.7 PREPAYMENT DISCOUNT

A. Frame Relay Service, ATM Service and LSS

(T)

At the customer's request, recurring rates for FRS, ATM Service and/or LSS provided under a Pricing Plan may be prepaid in whole or in part. The Company will calculate the prepayment amount using the following Present Value of an Annuity formula:

(T)

$$\text{Prepayment} = (\text{Recurring Rate}) \frac{\left(1 + \frac{i}{12}\right)^n - 1}{\frac{i}{12} \left(1 + \frac{i}{12}\right)^n}$$

In the above formula, the variable "i" is equal to the Treasury rate plus a prepayment premium expressed as an Annual Percentage Rate (APR). The variable "n" (an exponent) is a fixed period in months for which the customer requests to prepay the recurring rate in whole or in part.

If the customer discontinues the prepaid service in whole or in part prior to the expiration of the original fixed period, the Company will calculate the Present Value of an Annuity refund amount by using the same rate at which the prepayment was initially calculated. From this credit, Termination Liability charges as specified in 8.1.5, preceding, are subtracted. If a credit balance remains, the Company will return it to the customer.

8. ADVANCED COMMUNICATIONS NETWORKS

8.1 GENERAL (Cont'd)

8.1.8 PROMOTIONS

A. Utah Promotion – Reduced Minimum Service Period for ATM Service (T)

This promotion applies to customers ordering the following services in Utah between September 15, 2001 and December 1, 2001, with order completion within 90 days of the order date. Refer to 7.1.9.A. for a related promotion.

ATM Service – DS3 and OC3 are eligible for this promotion: (T)

This promotion reduces the preceding services' month-to-month minimum service periods from 12 months to 6 months.

ATM Service requires that the customer complete a Fixed Period Service Rate Plan (or Pricing Plan) before the customer may subscribe to month-to-month service. This promotion waives that requirement so the customer may immediately subscribe to month-to-month service. (T)

This promotion does not apply to minimum service periods for Pricing Plans. The month-to-month rates and nonrecurring charges for these services are not changed by this promotion. Special Construction may apply.

This promotion shall not be used with other promotional offerings.

8.1.8 PROMOTIONS (Cont'd)

B. FRS Pricing Plan Promotion 2 - January 5, 1999 through March 31, 1999

For a limited time only, the nonrecurring charges for FRS will be waived for customers who install new service and subscribe to a 24-month or greater Pricing Plan; or for existing FRS Pricing Plan customers who install service at a new customer premises or location and subscribe to a 24-month or greater Pricing Plan; or for existing FRS customers who upgrade from a monthly or a 12-month Pricing Plan to a 24-month or greater Pricing Plan. Order applications must be placed from January 5, 1999 through March 31, 1999, with order completion within 60 days of the order application date. The order application date is the date the service is ordered. When order completion is delayed due to Company reasons, the order completion date will be extended. Termination Liability or Discontinuance Charges will not apply.

Exclusions to the above promotion are:

1. Moves of existing services within the same building or to a different building.
2. Customer Network Management (CNM)
3. Each additional PVC charge associated with existing service pointing to an existing location.
4. Subsequent PVC(s) order charge associated with existing service pointing to an existing location.

8.1.8 PROMOTIONS (Cont'd)

U. MAS Pricing Plan Promotion – July 24, 2000 through October 21, 2000

The following MAS Pricing Plan promotional offerings are available to customers subscribing to a new MAS 12-, 36- or 60-month Fixed Period Service Rate Plan or adding to an existing MAS 12-, 36- or 60-month Fixed Period Service Rate Plan from July 24, 2000 through October 21, 2000. These offerings may not be combined with any other promotion.

- If a customer subscribes to a MAS 12-month Fixed Period Service Rate Plan, they will receive a credit equal to 1 month of the recurring charges, the credit will be applied to the customer's first month of service.
- If a customer subscribes to a MAS 36-month Fixed Period Service Rate Plan, they will receive a credit equal to 2 months of the recurring charges, the credits will be applied to the customer's first and second months of service.
- If a customer subscribes to a MAS 60-month Fixed Period Service Rate Plan, they will receive a credit equal to 3 months of the recurring charges, the credits will be applied to the customer's first, second and third months of service.

All credits will be forfeited, on a per plan basis, if a customer terminates one of these promotional Fixed Period Service Rate Plans prior to the expiration date of the plan. Any credits already given for the terminated plan will be included in the termination liability charges.

X. FRS, ATM and LSS Pricing Plan Promotion – April 2, 2001 through June 29, 2001

LSS does not offer a 48-month Pricing Plan.

The following promotional offerings are available to new customers or customers upgrading or adding to their existing service who subscribe to a new 36-month or longer Pricing Plan for FRS, ATM or LSS from April 2, 2001 through June 29, 2001. These offerings are not available with other FRS, ATM or LSS promotions.

New customers will receive 2 or 3 months recurring credit if they subscribe to a 36-month or longer FRS, ATM or LSS Pricing Plan. If the service is for 36 or 48 months then qualifying customers will receive a 2-month credit that will be applied to the customer's first 2 bills. If the service is for 60 months or longer then qualifying customers will receive a 3-month credit that will be applied to their first 3 bills. This same offering is also available for existing customers who upgrade their service to FRS, ATM, or LSS; or who upgrade their Pricing Plan to a higher transmission speed or install new service at a new location; or who upgrade from a monthly Plan to a 36-month or greater Pricing Plan.

Customer orders must be placed from April 2, 2001 through June 29, 2001, with order completion for FRS – DS1 and below within 60 days of the order date and FRS – DS3, ATM and LSS within 120 days of the order date. When order completion is delayed due to Company reasons, the order completion date will be extended. Termination Liability or Discontinuance Charges will not apply.

(N)

(N)

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

(T)(M)

8.2.1 GENERAL

Public Packet Switching Network (PPSN) is a service, which utilizes packet switching technology and digital transmission facilities to provide common user switched data transport. PPSN consists of Packet Switch Nodes (PSN), Packet Switch Service Points (PSSPs) with modems or data service units (DSUs) and digital facilities. PPSN provides for simultaneous two-way transmission of data signals at various speeds within a PSSP, between two PSSPs, or between a PSSP and a PSN. PPSN connects customers to other customers (end users, Information Service Providers, Interexchange Carriers and other Packet Networks) served from PSSPs and PSNs.

(T)

Messages are transported through the network in data packets. Packets remain in the proper sequence by means of the establishment of virtual circuits using transport capabilities of the X.25 or X.75 protocols.

Customers may access the PPSN at those wire centers where PSSPs and/or PSNs are located. These locations are listed in the National Exchange Carrier Association, Inc., Tariff F.C.C. No. 4.

A. Types of Access

PPSN provides the ability for customers to originate or terminate data calls to other customers connected to the service. The type of service available to a customer is dependent on the manner in which the customer accesses the network. There are five types of access available:

- Public Dial Access (to Packet Switch Service Points)
- PSSP Access (via Private Line Transport Service)
- PSN Access (via Private Line Transport Service)
- Private Dial Access (to Packet Switch Service Points)

(M)

Certain material on this page formerly appeared on Page 8-2
Certain material previously found on this page can now be found on Pages 8-430 and 8-431.

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.1 GENERAL

A. Types of Access (Cont'd)

1. Public Dial Access (to Packet Switch Service Points)

Customers may access the PPSN Service Public Dial Access ports at PSSPs by dialing the 7- or 10-digit telephone number assigned to the port. The rates and charges for the circuit-switched call placed over the voice telephone network are not included in this service. The charges for the circuit-switched call will be charged by the vendor of that service directly to the customer. In addition, the rates and charges for exchange services are not included.

Public Dial Access ports provide X.3, X.28 and X.29 asynchronous protocol connections at 300 and 1200 bps, 2.4 and 9.6 kbps and may originate calls to PSSP and PSN Access Ports only. All calls originated from Public Dial Access Ports must be billed to the called party (Reverse Charge). If the called party does not accept the charges, the call will be blocked and cleared.

2. PSSP Access (Via Private Line Transport Service)

Customers may access the PPSN Service at PSSPs via analog or digital Private Line Transport Service channels as described in Section 7, preceding. Analog Private Line Service - Voice Grade, VG6 or VG10, channels may be used to access the analog ports or Digital Data Service channels may be used to access the synchronous digital ports.

PSSP Access Ports may be either analog or digital synchronous X.25 protocol. Analog ports provide synchronous connections to the PSSP at speeds of 2.4, 4.8, or 9.6 kbps with X.25 protocol.

PSSP Access Ports may both originate and terminate calls (messages) as described following:

8.2.1 GENERAL

A.2. (Cont'd)

a. Originating Calls

Calls may be placed to other PSSP Access Ports or to PSN Access Ports. Originating calls are initiated by the PSSP Access customer and are billed according to the billing option selected as follows:

Prepaid

Unless specifically identified on a call by call basis all originating traffic will be charged to the calling party.

Reverse Charge Billing

Unless specifically identified on a call by call basis all originating traffic will be reverse charged to the called party.

b. Terminating Calls

Terminating calls may be received from originating Dial Access Ports, PSSP Access Ports, or PSN Access Ports. The types of calls received are dependent on the billing option selected as follows:

Reverse Charge Acceptance

Customers who select this option will accept the charges for all calls sent to the network address(es) assigned to the customer.

Reverse Charge Denied

Customers who select this option will only be able to receive calls that have been billed to the originating caller (prepaid). When this option is elected, calls from dial access customers cannot be received.

8.2 PUBLIC PACKET SWITCHING NETWORK

(T)(M)

8.2.1 GENERAL

(T)

A. Types of Access (Cont'd)

3. PSN Access (Via Private Line Transport Service)

Packet Switch Node (PSN) Ports provide the customer with direct access to a Packet Switch Node. The customer may access the PSN Ports via Analog Private Line Service - Voice Grade, VG6 or VG10, or Digital Data Service channels as described in Section 7. PSN Access Ports may be either X.25 or X.75 protocol connections at speeds of 9.6 kbps analog or 9.6 or 56 kbps digital.

(T)

PSN Access Ports may both originate or terminate calls (messages) as described following:

a. Originating Calls

Originating calls may be placed to other PSN Access Ports or to PSSP Access Ports. Originating calls are initiated by the PSN Access customer and are billed according to the default billing option selected:

Prepaid

(T)

Unless specifically identified on a call by call basis all originating traffic will be charged to the calling party.

Reverse Charge Billing

(T)

Unless specifically identified on a call by call basis all originating traffic will be reverse charged to the called party.

b. Terminating Calls

Terminating Calls may be received from originating Private or Public Dial Access Ports, PSSP Access Ports or PSN Access Ports. PSN Access customers must subscribe to Reverse Charge Acceptance.

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.1 GENERAL

A. Types of Access (Cont'd)

4. Private Dial Access (to Packet Switch Service Points)

Customers may access the PPSN Private Dial Access ports at PSSPs by dialing the unique 7- or 10-digit telephone number assigned to the port(s). The rates and charges for the circuit switched call placed over the voice telephone network are not included in this service. The charges for the circuit switched call will be charged by the vendor of that service directly to the customer.

Private Dial Access ports provide X.3, X.28 and X.29 asynchronous protocol connections at 300 and 1200 bps, 2.4 and 9.6 kbps and synchronous X.32 protocol connections at 9.6 kbps. Private Dial Access ports may originate calls to PSSP and PSN Access ports only. All calls originating from Private Dial Access ports are billed according to 2.a., preceding.

The Private Dial Access port includes a connection to the local switched telecommunications network for the termination of voice telephone network calls at the PSSP. This connection does not provide for a listing in the local exchange telephone directory, and may be arranged as a single line or, for multiple lines, they may be provided in a hunting arrangement.

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.1 GENERAL (Cont'd)

(T)(M)
(T)

B. Performance and Interconnection Specifications

PPSN Service provides high quality transport of data using packet switching and digital transmission facilities. The customer shall provide data terminal equipment in accordance with the interface specifications as described in the Qwest Corporation Technical Publication PUB 77359. Flexible interconnection arrangements are available to the customer as described following:

1. Public Dial Access

Public Dial Access is initiated by the customer dialing the PSSP access number (NPA) N29-2929 via the circuit switched telephone network. Dial Access supports asynchronous protocol only at transmission speeds of 300 and 1200 bps and 2.4 and 9.6 kbps.

- Dial access is not recommended from multiparty exchange service.
- To preclude operator interruptions, public dial access is not recommended from a coin operated telephone except on a third party or credit card basis.

2. PSSP Access

PSSP Access is provided through channels (circuits) as defined in Section 7, preceding, to connect the customer through a modem or data service unit (DSU) to a port on the PSSP. PSSP Access supports synchronous X.25 protocol and has a unique network address.

(M)

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.1 GENERAL

B.2. (Cont'd)

(T)(M)
(T)

The X.25 protocol provides the capability of establishing multiple virtual communication links from the customer through the PPSN Network. X.25 protocol ports will interface with analog or digital channels. Analog speeds are 2.4, 4.8 and 9.6 kbps. Digital speeds are 2.4, 4.8, 9.6, and 56 kbps.

3. PSN Access

PSN Access is provided through channels (circuits) as defined in Section 7, preceding, to connect a customer directly to a port on the PSN. This arrangement supports high speed 9.6 or 56 kbps channels and either X.25 or X.75 protocol. X.75 protocol provides load distribution. PSN Access has the capability of establishing multiple virtual communication links from the customer through the PPSN.

Analog access is available only at 9.6 kbps. Digital access is available at 9.6 and 56 kbps.

4. Private Dial Access

Private Dial Access is provided through the voice telecommunications network, as defined in 8.2.1.A.4., preceding, to connect the customer, through an analog modem, to a port on the PSSP. Private Dial Access supports asynchronous (X.3, X.28, X.29) protocol only at transmission speeds of 300 and 1200 bps and 2.4 and 9.6 kbps and synchronous (X.32) protocol only at a transmission speed of 9.6 kbps.

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.2 REGULATIONS (Cont'd)

B. Rate Regulations

1. The minimum service period for PPSN monthly rate categories is 1 month. The minimum period for Public Packet Switching Pricing Plan is 12 months.
2. For dial access, the minimum usage per call for the Network Connection Time is one minute.
3. The minimum usage per call for Packet Transport is one segment.
4. The minimum charge for all Private Line Transport Services channels connected to PPSN is as specified in Section 7 or 17 depending upon the degree of Pricing Flexibility granted to the customer's wire center.

(C)
(C)

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK (Cont'd)

8.2.3 RATE ELEMENTS

There are four rate categories which may apply to the PPSN Service:

- PSSP, PSN, and Private Dial Port Access Connection
- Network Usage (Including Dial Access)
- Port Features and Basic Service Elements (BSEs)
- Rearrangement Charge

In addition, the rates and charges for Private Line Transport Service apply for each private line channel between a customer's designated premises and a PSSP or PSN port. Application of the rates and charges apply as described in Section 7 or 17, depending upon the degree of Pricing Flexibility granted to the customer's wire center. The appropriate vendor's rates apply for circuit switched calls to dial access ports. In addition, rates and charges for exchange services are not included.

(C)
—
(C)

A. PSSP, PSN, and Private Dial Ports Access Connections

The Access Connection, Access Port rate category provides a dedicated connection at a PSSP or PSN. The Private Dial Access port provides for a local exchange switched connection at the PSSP. There are two types of dedicated access ports, the PSSP Access Port described in 1., following, and the PSN Access Port described in 2., following. The Private Dial Access Port is described in 3., following.

1. PSSP Access Port provides the customer with a dedicated analog or digital access through a modem or Data Service Unit (DSU) to a port on a PSSP. Transmission speeds of 2.4, 4.8, 9.6, and 56 kbps with X.25 protocol are available.

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.3 RATE ELEMENTS

A. PSSP, PSN, and Private Dial Ports Access Connections (Cont'd)

2. PSN Access Port provides the customer with dedicated analog or digital access through a modem or DSU to a port on the PSN. Transmission speeds of 9.6 or 56 kbps with X.25 or X.75 protocols are available.
3. Private Dial Access port provides the customer with an analog access, via the public switched network, to a port on a PSSP. Transmission speeds of 300 and 1200 bps and 2.4 and 9.6 kbps with X.3, X.28, X.29 asynchronous protocol and 9.6 kbps with X.32 synchronous protocol are available.

B. Network Connect Time (Dial Access Only)

Dial Access Usage provides for the use of a Dial Access Port other than Private Dial Access Ports, from the time the call is connected until it is terminated. The usage is billed to the terminating network address of the PPSN dial access call on a per minute of connect time basis rounded up to the next whole minute. Usage will be rated at the day rate for that portion of the call in effect during the day rate period (6:00 a.m. 6:00 p.m.) and at the night rate for the portion of the call in effect during the night rate period (after 6:00 p.m. and before 6:00 a.m.) as measured at the Signaling Network Control Center, Denver, Colorado.

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.3 RATE ELEMENTS (Cont'd)

C. Port Features and BSEs

The PSSP and PSN Access customers may select the following port features and BSEs. Some of these features and BSEs are offered at no additional monthly charge. See 8.4.3, following.

1. Access (Asynchronous Only) - One of these three must be selected:

- a. Incoming Calls Barred - The access port is prevented from accepting incoming virtual calls.**
- b. Outgoing Calls Barred - The access port is prevented from placing outgoing virtual calls.**
- c. Two Way Access - The access port is capable of accepting incoming and placing outgoing calls.**

2. Auto Call (Asynchronous only) - Allows the subscriber to access a single, predefined address in lieu of the normal call initiation process. The port may be limited to the sole access of this single address. Where available, the subscriber may override the "Auto Call" option and call another address.

3. Call Redirection (BSE) (Asynchronous and X.25) - At a customer request or in the event of a port failure calls will be directed to a single alternate address. This feature requires the customer to have an alternate port and line designated for this purpose. This feature works automatically concurrent with call initiation.

4. Closed User Group (CUG) (BSE) (Asynchronous, and X.25) - Provides transmission via virtual channels among several specific network addresses arranged into a subnetwork. Each network address may be arranged in a CUG with as many as 10 CUG's available per subscribing host. CUG options are:

- a. CUG Incoming Access Barred (BSE) - Allows a member of the CUG to originate calls to other members of that CUG, but not receive incoming calls from members of that CUG.**

Certain material on this page formerly appeared on Page 8-50.

Certain material previously found on this page can now be found on Pages 8-56 and 8-57.

C.4. (Cont'd)

- | | |
|--|--------|
| | (T)(M) |
| b. CUG with Incoming Access - Allows a member of a CUG to receive incoming calls from any Data Terminal Equipment (DTE) not in that CUG or from any DTE within that CUG with the "CUG with Outgoing Access" feature. | (T) |
| c. CUG Outgoing Access Barred (BSE) - Allows a member of a CUG to receive calls from other members of that CUG, but not originate any calls to members of the CUG. | (T) |
| d. CUG with Outgoing Access - Allows a member of a CUG to make outgoing calls to any DTE not in that CUG and to any DTE within that CUG with the "CUG with Incoming Access" feature. | (T) |
| e. CUG Access Only - No incoming or outgoing calls allowed outside of that CUG. | (T) |
| 5. Fast Select Acceptance (BSE) (Asynchronous and X.25) - Permits the request of up to 124 octets of user data in the call initiation packet and acceptance of up to 124 octets of data in the call termination packet. Additional data packets can be accepted following the acceptance of the call initiation packet. | (T) |
| 6. Flow Control Parameters (BSE) (Asynchronous, X.25 and X.75) - Permits negotiation on a per call basis of the flow control parameter window size for each direction of data transmission in the network. Window size values of two through seven are supported. Default value is two. Maximum packet size of 256 octets is supported. Default packet size is 128 octets. | (T) |
| 7. Link Level Parameters (X.25 and X.75) - Allows the subscriber to specify link level, acknowledgment timer, number of retransmission attempts, and frame size. | (T) |
| 8. Logical Channel (BSE) (X.25 and X.75) - Allows the DTE to derive multiple logical channels from a single physical access line. This is accomplished by specifying the logical channel number on every packet that crosses the Network interface. | (T) |
| | (M) |

8.2.3 RATE ELEMENTS

C. Port Features and BSEs (Cont'd)

- | | | |
|---|-----|-----|
| 9. Logical Channel Layout (BSE) (X.25 and X.75) - Permits the arrangement of logical channels to be configured as incoming, outgoing, two way and/or Private Virtual Circuit (PVC). | (T) | (M) |
| 10. Mnemonic Addressing (BSE) (Asynchronous, and X.25) - Allows the subscriber to access predefined addresses by utilizing a predesignated alphanumeric unique character(s) in lieu of the normal call initiation process. The port is not limited to sole access of this single address when normal call initiation procedures are followed. | (T) | |
| 11. Multiple Port Hunt Groups (BSE) (Asynchronous, and X.25) - A group of access ports with a single data network address. The Maximum number of ports available per hunt group is 16. | (T) | |
| 12. Multiple Network Addresses (BSE) (X.25 only) - One address is included with the port. More than one network address may be assigned to a single access port. Multiple addresses may be purchased in blocks of 10. | (T) | |
| 13. Network Terminal Profile (Asynchronous only) - Permits assignment of a profile representing the X.3, X.28 and X.29 parameter configuration of the user's asynchronous terminal. | (T) | (M) |

8.2.3 RATE ELEMENTS

C. Port Features and BSEs (Cont'd)

- | | |
|---|------------|
| | (T)(M) |
| | |
| 14. Nonstandard Window Size (BSE) (Asynchronous, X.25 and X.75) - Permits the customer to select a window size of two through seven for either or both directions of transmission. Standard default value is two. | (T) |
| 15. Permanent Virtual Circuit (BSE) (Asynchronous, X.25 and X.75) - Permits transmission between two Data Terminal Equipment (DTEs) on the network without the initial packet to establish the call. The transmission path is predefined throughout the network. The default window size for both directions of transmission is two. | (T) |
| 16. Reverse Charge Option (BSE) - Allows for the billing of usage charges associated with calls to be billed to the terminating network address. | (T) |
| 17. Reverse Charge Acceptance (BSE) (Terminating Calls) - Customers who select this option will accept the charges for all calls sent to the network address(es) assigned to the customer. In order to receive calls from a dial access customer, this option must be selected. | (T) |
| 18. Throughput Class Negotiation (X.25 and X.75) - Permits negotiation on a per call basis of the throughput class for each direction of data transmission. | (T) |
| 19. X.25 Gateway Option (BSE) - Provides the ability to route calls to a private X.25 network on the PPSN using the first three or six digits of the destination address. It is the responsibility of the private network to route calls to the specific destination address. This feature allows a private network to assign individual addresses to end users while having a single interconnection to the Company over which traffic will be delivered. The X.25 Gateway Option is available for either three- or six-digit screening and will be provided on PSN X.25 ports only. | (T)
(M) |

(T)(M)

8.2.4 PRICING PLANS

(T)

PPSN may be ordered at the customer's option on a month-to-month basis or for fixed periods of 3 years (36 months) or 5 years (60 months). The optional rate plan allows the PPSN customer to order this service with the assurance that there will be no increases in rates during the fixed period. The optional rate plans apply to the PSSP Access Port, PSN Access Port, Private Dial Access, and Logical Channel rate elements.

A. Fixed Period Service Rate Plans

(T)

The customer may subscribe to a 36- or 60-month fixed period service rate plan. The minimum service period for fixed period service is 12 months. The customer must specify the length of the fixed period service at the time the service is ordered.

(T)

(T)

For customers that subscribe to fixed period service of 36 or 60 months, the monthly rates for the entire fixed period will be frozen from Company-initiated increases, at the rates in effect for the fixed period on the service date.

All rate elements of a PPSN service to be included in a fixed period service must be ordered under the same term conditions (i.e., all 36 months or all 60 months) and with the same negotiated service date.

Ports and Logical Channels may be added to an existing fixed period on a month-to-month basis or under the same fixed period rate plan as the existing PPSN, but at the rates and charges in effect at the time of the addition.

(M)

Certain material on this page formerly appeared on Page 8-64.
Certain material previously found on this page can now be found on Page 301.

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.4 PRICING PLANS

A. Fixed Period Service Rate Plans (Cont'd)

At the end of the fixed period service, the customer may convert to month-to-month or subscribe to a new fixed period service. The monthly rates will be adjusted to those in effect for the new fixed period service. Should the customer not make a choice by the end of the fixed period, the rates will automatically revert to the month-to-month option.

If a rate decrease occurs during the term of an existing fixed rate plan contract, the reduced rates will automatically be applied to the remaining term of the current contract period.

Effective September 1, 1998, customers establishing a Fixed Period Rate Plan, will not receive a rate decrease if the Company decreases rates during the term of the plan. Fixed Period Rate Plans established on or before August 31, 1998, will automatically receive a rate decrease if the Company decreases rates during the term of the plan.

8. ADVANCED COMMUNICATIONS NETWORKS

8.2 PUBLIC PACKET SWITCHING NETWORK

8.2.4 PRICING PLANS (Cont'd)

B. Upgrades In Rate Plan

Services rated as month-to-month may be upgraded to a fixed period service rate plan at any time the customer chooses without incurring nonrecurring or discontinuance charges, this includes ports and logical channels added subsequently to an existing fixed period rated service but rated as month-to-month (see A., preceding). In addition, customers rated under the 36-month plan may upgrade to the 60-month plan without incurring nonrecurring or discontinuance charges. The monthly rates will be those that are in effect at the time the service is upgraded. New minimum service periods apply to all upgrades.

New minimum service period applies to all Packet Switching Pricing Plan rate elements that are upgraded in the following manner:

- If the service being upgraded has been in place for more than 12 months, minimum period provisions will not apply, or
- If the service being upgraded has been in place for less than 12 months, the time in service will be applied against the minimum period term.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

(S-y)

8.3.1 GENERAL

A. Description

Frame Relay Service (FRS), employing digital technology, provides high speed access connections and throughput to interstate service providers or provides high speed throughput to intraLATA interstate Local Area Networks (LANs), as well as host access capabilities. For interLATA interstate FRS, the customer must specify the IC to which the service is connected and the means by which the FRS is transported to another state. Utilizing statistical multiplexing, FRS enables users to allocate circuit bandwidth to applications as needed, up to the maximum bandwidth purchased, rather than assigning fixed channels to specific applications. FRS supports transmission speeds up to 44.736 Mbps.

FRS requires the use of customer-provided terminal equipment that functions as a multiplexer/bridge/router. This terminal equipment must be purchased separately from the FRS and must conform to Telecommunications Standardization Sector of the International Telecommunications Union (ITU-T) and American National Standards Institute (ANSI) standards set forth in technical publications. The terminal equipment accumulates customer data and puts it into a frame relay format suitable for transmission over the Frame Relay Advanced Communications Services (ACS) Network.

FRS conforms to ITU-T and ANSI standards set forth in ANSI technical documents (see "Reference To Technical Publications" in Section 0, preceding). Technical Specifications for FRS are delineated in Qwest Corporation Technical Publication PUB 77372. Performance specifications for 44.736 Mbps FRS are delineated in Qwest Corporation Technical Publication PUB 77324 and PUB 77372.

(S-y)

Grandfathered Services

(N)

As of December 31, 2000, 2-Wire 128 kbps Service, and Fault Tolerant and Priority PVC Features are Grandfathered to existing customers.

Month-to-month customers may retain 2-Wire 128 kbps Service, Fault Tolerant and Priority PVC until December 31, 2001. At that time the Grandfathered service/feature will be discontinued.

(N)

(y) Reissued matter filed under Transmittal No. 28, to become effective December 6, 2000.

(Filed under Transmittal 30.)

Issued: December 11, 2000

Effective: December 26, 2000

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL

A. Description

Grandfathered Services (Cont'd)

Customers with an existing fixed period plan may retain the service/feature until the expiration date of the fixed period. Customers with fixed periods expiring between December 31, 2000 and November 30, 2001 may extend their contract until December 31, 2001, and retain the service at their contracted rates. Customers must contact their sales representative to request this extension.

Customers with 2-Wire FRS, Fault Tolerant and Priority PVC on a fixed period plan may make additions, rearrangements, changes, or moves of existing service if the service, required equipment, and facilities are available for the duration of the fixed period.

Customers may change their existing 2-Wire FRS to 4-wire FRS, 56 kbps, 1.544 Mbps or fractions thereof, and the Company will waive the nonrecurring change for the new 4-wire service. Month-to-month customers may migrate to 4-wire FRS at no charge until December 31, 2001. Customers under contract may migrate to 4-wire FRS at no charge prior to the expiration date of that contract.

(S-y)

(S-y)

(N)

(N)

(y) Reissued matter filed under Transmittal No. 28, to become effective December 6, 2000.

(Filed under Transmittal 30.)

Issued: December 11, 2000

Effective: December 26, 2000

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL (Cont'd)

B. Service Elements

1. Network Interface

When an FRS Access Link is used to access the ACS Frame Relay Network, the point at which a customer's data transmissions first enter the network supporting Frame Relay Service is the network interface. It is the point of interconnection between Company communications facilities and customer terminal equipment.

2. Access Link

For 4-Wire 56 kbps through 1.544 Mbps Frame Relay Service, a connecting FRS Access Link provides access to the ACS Frame Relay Network customer facilities at the network interface connecting other frame relay networks' facilities at the network interface with an Information Transfer service element. The 56 kbps Access Link utilizes the 56 kbps Information Transfer service element, a 64 kbps Access Link utilizes the 64 kbps Information Transfer, and the 1.544 Mbps Access Link utilizes the 56 kbps through 1.544 Mbps Information Transfer service elements.

A Grandfathered 2-wire 128 kbps Access Link employs Integrated Services Digital Network (ISDN) BRI signaling over a single pair to allow customers to access Frame Relay Service over local loop facilities. The 2-Wire 128 kbps Access Link utilizes a 2-Wire 128 kbps User-To-Network Information Transfer service element and must be connected to a Permanent Virtual Connection(s). The customer's serving wire center must be a Company-designated FRS Service Point.

Frame Relay uni-directional polling is required on the Access Link when used in conjunction with User-To-Network Information Transfer. Frame Relay bi-directional polling is required on the Access Link when used in conjunction with the Network-To-Network Information Transfer.

(y) Reissued matter filed under Transmittal No. 28, to become effective December 6, 2000.

(Filed under Transmittal 30.)

Issued: December 11, 2000

Effective: December 26, 2000

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL

B.2. (Cont'd)

In lieu of the 56 or 64 kbps or 1.544 Mbps 4-Wire FRS Access Link, a Private Line Transport 56 or 64 kbps or any 1.544 Mbps interface in Section 7, 17 and/or Section 15, or an EICT (Expanded Interconnection Channel Termination) DDS, EICT 1.544, or ITP (Interconnect Tie Pair) 1.544 Mbps from Section 21, may be used to access Frame Relay Service. (C)

In lieu of an FRS Access Link, a Private Line Transport DS3 Service Channel Termination (CT) with Clear Channel Capability, as set forth in Section 7 or 17, is used to provide access to a 44.736 Mbps Information Transfer. The DS3 Service CT provides access to the ACS Frame Relay Network switch via a connection between customer facilities at the network interface and an Information Transfer service element. In lieu of the DS3 CT, an EICT 44.736 or ITP 44.736, specified in Section 21, may be used to access FRS. FRS switch locations are designated by the Company and are identified in the National Exchange Carrier Association, Inc. Tariff F.C.C. No. 4. (C)

3. Stand-Alone Access Link

A Stand-Alone Access Link connects customer-premises facilities to frame relay service networks provided by service providers other than the Company. It does not connect to the ACS Frame Relay Network. A Stand-Alone Access Link requires uni-directional polling. Private Line Transport Service (PLTS) Transport Channel mileage rates as set forth in Section 7 or 17, may be required in conjunction with a Stand-Alone Access Link to connect the customer's serving wire center, or node, with the serving wire center, or node, of another frame relay service provider. (C)

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL

B. Service Elements (Cont'd)

4. Ports

Ports are part of the FR switch and are the physical entry points for Access Links into the ACS Network. They are originating and terminating points for Permanent Virtual Connections (PVC) transport facilities between FR switches. Ports include the electronic equipment used to connect these service elements to the ACS Network. They enable customers to allocate bandwidth to applications as needed at customer-designated transmission speeds for 4-Wire of up to 56 or 64 kbps, 1.544 Mbps, 44.736 Mbps and for 2-Wire 128 kbps.

5. Service Points

Service Points are geographical locations designated by the Company where the ACS Network Ports are located and where the ACS Network is accessed. Service Point locations are designated by the Company and are identified in the National Exchange Carrier Association, Inc. Tariff F.C.C. No. 4. When the Company establishes new Service Points, which result in a change of existing FRS, the affected services will be rerated and redesigned to the new Service Point at no charge to the customers.

6. User-To-Network Information Transfer (UNIT)

The User-To-Network Information Transfer (UNIT) service element transfers information between the User-To-Network Interface (UNI) and the ACS Frame Relay Service Network.

User-To-Network Information Transfer provides the physical entry point into the ACS Network for Access Links. The UNIT includes the associated port, unidirectional Permanent Virtual Connections (PVCs) and ACS Frame Relay switching equipment. UNIT PVCs are provisioned at customer-selected Committed Information Rates (CIRs), and at port speeds for 4-Wire of 56 or 64 kbps, 112 or 128 kbps, 224 or 256 kbps, 336 or 384 kbps, 448 or 512 kbps, 672 or 768 kbps, or 1.544 Mbps, or 44.736 Mbps and for 2-Wire 128 kbps depending upon the customer's data networking requirements. UNIT provides unidirectional polling between the customer's facilities and the ACS FRS Network.

Certain material on this page formerly appeared on Page 8-14.

Certain material previously found on this page can now be found on Page 8-100.

(T)(M)

(T)

(M)

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL

B. Service Elements (Cont'd)

7. Network-To-Network Information Transfer (NNIT)

Available on a 4-Wire basis only, the Network-To-Network Information Transfer (NNIT) service element transfers information between the ACS Frame Relay Service Network and another frame relay network.

Network-To-Network Information Transfer provides the physical entry point into the ACS Network for Access Links. The NNIT includes the associated port, unidirectional Permanent Virtual Connections (PVCs) and ACS Frame Relay switching equipment. If the other frame relay service network's switch or facility is not in a location served by a Company serving wire center where an ACS FRS switch is located, private line transport charges will apply, at rates set forth in Sections 7 and 17 of this Tariff. NNIT PVCs are provisioned at customer-selected Committed Information Rates (CIRs), and at port speeds, dependent upon the customer's data networking requirements.

(C)

NNIT provides bidirectional polling between the ACS FRS Network and another frame relay network.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL

B. Service Elements (Cont'd)

8. Permanent Virtual Connection (PVC)

A PVC is a unidirectional logical channel from one Frame Relay Port to another Frame Relay Port within the ACS Network. PVCs are provisioned at customer-selected port speeds, with customer-selected Committed Information Rates (CIRs), depending on the customer's data networking requirements.

Although higher numbers of PVCs may be provided, depending on an individual customer's traffic characteristics, the following are the recommended maximum numbers of PVCs for designated FRS port speeds:

4-WIRE FRS PORT SPEEDS

RECOMMENDED NUMBER OF PVCs

56 or 64 kbps	30
112 or 128 kbps	40
224 or 256 kbps	80
336 or 384 kbps	120
448 or 512 kbps	125
672 or 768 kbps	125
1.544 Mbps	125
44.736 Mbps	[1]

GRANDFATHERED

2-WIRE FRS PORT SPEEDS

RECOMMENDED NUMBER OF PVCs

128 kbps	8
----------	---

[1] The maximum number of PVCs, which may be associated with 44.736 Mbps is 500.

(y) Reissued matter filed under Transmittal No. 28, to become effective December 6, 2000.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL

B. Service Elements (Cont'd)

9. Committed Information Rate (CIR)

Although FRS statistical multiplexing capabilities allow customers with FRS configurations to have aggregate PVC CIRs which are greater than the associated port speed, the actual throughput of aggregated PVC CIRs in use at any time on the same port cannot exceed the port speed.

A customer's data throughput may burst up to the customer's subscribed port speed; however, when data exceeds the CIR, the potential for discard exists. It is recommended that a customer subscribe to a CIR no greater than half the port speed; although, a larger CIR may be accommodated, as indicated below, depending on a specific customer's traffic characteristics.

The customer's CIR should closely match the Open System Interconnection (OSI) Model or equivalent Application and Network Layer protocols for the data application utilized.

CIR Options For Permanent Virtual Connections are delineated in PUB 77372.

Certain material previously found on this page can now be found on Pages 8-103 and 8-104.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL

B. Service Elements (Cont'd)

10. Central Office Connecting Channel (COCC)

When a customer accesses FRS via a private line transport facility which requires multiplexing to be compatible with FRS transmission speeds or requires port to port connectivity, the COCC provides the ongoing interconnection from the multiplexer or other Company facility port to an FRS port. The COCC provides connectivity up to 1.544 Mbps, or up to 44.736 Mbps.

11. Transport Channel

The Transport Channel provides for the transmission facilities between the serving wire center associated with the customer-designated premises and the FRS Service Point or FRS switch; or between an EICT or ITP and the FRS Service Point.

12. Optional Features and Functions

a. Customer Network Management (CNM)

The Customer Network Management (CNM) optional feature provides the customer with read-only access to information related to FRS faults, usage information, performance management functions and configurations. Customer-provided network management terminal equipment (e.g., workstation) is used to access CNM as delineated in Qwest Corporation Technical Publication PUB 77376. A PVC is used to access CNM in the Company's Public Data Network Control Center (PDNCC). The PVC is dedicated to the CNM feature but does not affect the total number of per port PVCs available to the customer. ACS network locations where CNM is available are designated in the National Exchange Carrier Association, Inc. Tariff F.C.C. No. 4.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.1 GENERAL

B.12. (Cont'd)

b. Priority PVC

Grandfathered Priority PVC assigns a higher transit priority to the customer's designated UNIT PVCs. During intermittent network congestion, frames with priority PVC will move ahead of the non-priority PVCs. This minimizes delay and lowers the probability for frame discards.

The Priority PVC Optional Feature is not available for 2-Wire 128 kbps Frame Relay Service.

8.3.1 GENERAL

B.12. (Cont'd)

c. Fault Tolerant Service

Grandfathered Fault Tolerant Service reroutes the customer's PVCs in the event of a service interruption at the customer's primary location. Upon notification by the customer that a service interruption has occurred, the PVCs will be rerouted to a backup UNIT. Upon notification by the customer that the service has been restored, the Company will reroute the customer's PVCs back to the primary service. Fault Tolerant Service can be used to backup one or more primary location, however, only one activation can occur at a time. The backup UNIT speed must be equal to or greater than the highest UNIT speed of the designated primary connection. Fault Tolerant Service is only available on speeds of 56/64 kbps, 1.544 Mbps, and/or 44.736 Mbps.

Fault Tolerant Service will be activated within 30 minutes of notification by the appropriate customer representative. If the service is not switched from the designated primary to the backup within that allotted time frame, the customer will pay one half of the normal activation fee for Fault Tolerant Service.

8.3 FRAME RELAY SERVICE (Cont'd)

8.3.2 REGULATIONS

A. General

1. A customer may access Frame Relay Service via an FRS Access Link, or, in lieu of the FRS Access Link, a Private Line Transport 56 or 64 kbps interface or any 1.544 Mbps interface in Section 7, 17 and/or Section 15, or an EICT DDS or EICT 1.544 Mbps or ITP 1.544 Mbps in Section 21. Regulations, rates and charges for Section 7 and/or 17 Channel Terminations, Transport Channels and Optional Features and Functions shall apply in addition to the regulations, rates and charges associated with the FRS. A customer utilizing Section 7 and/or 17 Private Line Transport Service Channel Termination or a EICT DDS, EICT 1.544 Mbps or ITP 1.544 Mbps from Section 21, in lieu of the FRS Access Link, would not incur the nonrecurring charge or monthly rate for a FRS Access Link, but would incur all other monthly rates and nonrecurring charges normally associated with the ordering, installing and provisioning of FRS, e.g., Information Transfer as set forth in this section. (C)
2. A subsequent PVC order is required when a customer chooses to add PVC(s), change PVC assignments or change the CIR on an existing PVC after the initial port installation. One nonrecurring subsequent PVC order charge applies in addition to the nonrecurring charge for each subsequent PVC(s) ordered. When more than one PVC is ordered or changed on the same customer service configuration at the same time, only one subsequent order charge applies. (C)
3. An FRS Access Link is available as a component of FRS or as a Stand-Alone Access Link offering which connects customer-premises facilities to frame relay service networks provided by service providers other than the Company. When a Stand-Alone Access Link is ordered, Transport Channel mileage may apply, as applicable, at rates set forth in Section 7 or 17. (C)

8.3 FRAME RELAY SERVICE

8.3.2 REGULATIONS (Cont'd)

B. Obligations of the Customer

In addition to the Obligations of the Customer in Section 2, the following regulations apply. Error correction is the responsibility of the customer's Frame Relay-compatible terminal equipment. FRS switches may discard frames with errors. They may also discard frames when the network supporting FRS is in a state of congestion. Congestion control and recovery mechanisms are as set forth in technical documents listed under "Reference to Technical Publications" in Section 0, preceding.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE (Cont'd)

8.3.3 RATE ELEMENTS

A. Access Link

A nonrecurring charge and monthly rate, based on the speed of the Access Link (i.e., 56 or 64 kbps, 2-Wire 128 kbps, or 1.544 Mbps), apply per Access Link for each physical connection to the network supporting FRS.

In lieu of an FRS Access Link, a Private Line Transport DS3 Service Channel Termination (CT) with Clear Channel Capability, as set forth in Section 7 or 17 depending upon the Pricing Flexibility relief in the customer's wire center, is used to provide access to a 44.736 Mbps Information Transfer. The DS3 Service CT provides access to the ACS Frame Relay Network switch via a connection between customer facilities at the network interface and an Information Transfer. FRS switch locations are designated by the Company and are identified in the National Exchange Carrier Association, Inc. Tariff F.C.C. No. 4.

(C)
(C)

B. Stand-Alone Access Link

A nonrecurring charge and a monthly rate, based on the speed of the Stand-Alone Access Link, apply per Stand-Alone Access Link for the physical connection between a customer's facilities and a frame relay service network provided by a service provider other than the Company. In addition to this rate element, PLTS Transport Channel mileage may apply, at the rates set forth in Section 7 or 17.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.3 RATE ELEMENTS (Cont'd)

C. Information Transfer (UNIT or NNIT)

A monthly rate, based on the speed of the port and the number of PVCs assigned to the port, applies per port for each FRS Access Link or digital private line connection to the network supporting FRS. A "First PVC" nonrecurring charge applies for the first unidirectional PVC ordered on an FRS Port. An "Each Additional PVC" nonrecurring charge applies for each additional unidirectional PVC ordered on the same FRS Port as the first PVC. For subsequent installations (order request after initial installations), a subsequent nonrecurring order charge applies, in addition to the "Each Additional PVC" nonrecurring charge, when PVCs are added, PVC assignments are changed, or CIR is changed on an existing PVC. In addition, private line transport charges may apply for NNIT, as set forth in Section 7 or 17 of this Tariff.

(C)

D. Transport Channel

The Transport Channel rate element provides for the transmission facilities between the serving wire center associated with the customer-designated premises and a FRS Service Point or an FRS Switch; or between an EICT or ITP and a FRS Service Point. The Transport Channel is portrayed in mileage bands. Two rates apply for each band -- a flat rate per band and a rate per mile. The sum of the two rates constitutes the Transport Channel rate element. The rates, set forth in Section 7 or 17, apply according to the speed of the Access Link (i.e., 56 kbps, 64 kbps, or 1.544 Mbps) or the speed of the Channel Termination (i.e., 56 kbps, 64 kbps, 1.544 Mbps, or 44.736 Mbps).

(C)

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.3 RATE ELEMENTS (Cont'd)

E. Central Office Connecting Channel (COCC)

A nonrecurring charge and a monthly rate apply per COCC connection between a multiplexer and a FRS Port or between a Company facility port and a FRS Port when used for port-to-port connectivity.

F. Optional Features and Functions

1. Customer Network Management

A monthly rate and a nonrecurring charge apply per customer-provided network management terminal equipment (workstation) designated to access the CNM optional feature. The customer must provide the Company with a registered address for each customer-provided workstation designated to access CNM. A nonrecurring charge applies for the initial setup of each workstation registered address designated to access CNM. A subsequent nonrecurring charge applies to change a workstation registered address in the CNM or to add CNM to existing FRS. When CNM is added to existing FRS, the subsequent nonrecurring charge applies, in addition to the initial setup nonrecurring charge.

F. Optional Features and Functions (Cont'd)

(S-y)

2. Priority PVC (Grandfathered)

(C-y)

A nonrecurring charge applies per UNIT PVC to establish priority designation and is in addition to the rates and charges for the UNIT PVCs with which priority is associated. A monthly rate, based on the speed of the UNIT, applies per Unit Priority PVC.

(S-y)

(S-y)

3. Fault Tolerant Service (Grandfathered)

(C-y)

A Frame Relay UNIT Initial Service Establishment nonrecurring charge applies to establish Fault Tolerant Service. The UNIT speed must be equal to or greater than the highest UNIT speed of the designated primary connection (e.g., if the interruption occurs on a 1.544 Mbps UNIT, the backup UNIT must be 1.544 Mbps or greater). A Subsequent Service Establishment nonrecurring charge applies to add primary site(s) to a previously established Fault Tolerant backup. In addition, the Fault Tolerant Service UNIT monthly rate for a 56/64 kbps, 1.544 Mbps or 44.736 Mbps UNIT with 0 PVCs applies. A customer must also purchase access to the Frame Relay UNIT (e.g., an Access Link). When a customer request is received to activate the Fault Tolerant Service to reroute the customer's primary PVCs to the backup, then subsequently restore the service to the primary PVCs, one Activation and Restoral nonrecurring charge also applies.

(T)

8.3.4 PRICING PLANS

A. General

FRS has two optional Pricing Plans: Fixed Period Service Rate Plan and Rate Stability Plan. The optional rate plans allow the FRS customer the assurance of no Company-initiated increases in rates during the fixed period.

In addition to the optional Pricing Plans the Company offers a nonrecurring charge (NRC) waiver to customers who subscribe to large volumes of FRS within the Qwest Corporation's 14 state region. The terms and conditions for this waiver are as set forth in 3, following.

(N)

(N)

1. Rate Stability Plan

FRS existing customers may have stabilized rates for fixed periods of 12 months, 24 months, 36 months, 48 months, 60 months, 72 months or 84 months at the rates listed in 8.4.2.A.

As of May 29, 1995, the Rate Stability Plan is no longer available for new subscribers. Existing RSP subscribers may retain RSP until the expiration of the existing term or until the customer disconnects the service. In this situation, a move to a different building does not constitute a disconnect of service.

2. Fixed Period Service Rate Plan

The FRS customer (except 2-Wire 128 kbps) may order this plan for 12 months, 24 months, 36 months, 48 months, 60 months, 72 months, or 84 months at the rates set forth in 8.3.5. Prior to the Grandfather date of December 26, 2000, the 2-Wire 128 kbps FRS customer could order this plan for 12 months, 36 months, or 60 months at the rates set forth in 8.3.5.

3. Volume Nonrecurring Charge (NRC) Waiver

FRS customers who have 500 or more activated Frame Relay Access Links on a Fixed Period Service Rate Plan of 36 months or greater are eligible for the Volume NRC Waiver. This waiver will only be applicable to the nonrecurring charges associated with the 1.544 Mbps Access Link and the User-To-Network Information Transfer (UNIT) PVC charges associated with 1.544 Mbps and 44.736 Mbps as set forth in 8.3.5, following.

(N)

(N)

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS (Cont'd)

(T)(M)

B. Terms and Conditions

1. Monthly rates for the entire fixed period will be frozen from Company-initiated increases, at the rates in effect for the fixed period on the service date. (T)
2. The customer must specify the length of the fixed period at the time the service is ordered. (T)
3. FRS rate elements may be ordered under monthly or any optional rate plan. For example, the customer may order the Access Link under the 36-month fixed period service rate plan and the Information Transfer under the 60-month fixed period service rate plan. (T)
(T)
4. Customers with fixed period service established prior to September 1, 1998 receive rate decreases occurring during that fixed period. The reduced rates are automatically applied to the remaining term of the fixed period. (T)
5. Effective September 1, 1998, customers establishing a Fixed Period Rate Plan, will not receive a rate decrease if the Company decreases rates during the term of the plan. Fixed Period Rate Plans established on or before August 31, 1998, will automatically receive a rate decrease if the Company decreases rates during the term of the plan. (T)

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS

B. Terms and Conditions (Cont'd)

8. Phased-In Installation Rates and Charges Regulations

For Pricing Plans in effective as of November 14, 1994, and for each individual customer's FRS ordered under a Pricing Plan since that date, the recurring rates and nonrecurring charges for rate elements installed or moved to a new building during the first 24 months of the customer's Pricing Plan, or 12 months for customer's who subscribe to the 12-month Plan, will be those rates in effect as of the installation date of the first rate element (unless a decrease in rates has occurred, in which case the lower rates will apply).

After the first 24 months of the Pricing Plan, or 12 months for customer's who subscribe to the 12-month Plan, FRS Access Links and Optional Features and Functions may be moved or added to an existing Pricing Plan using the original Pricing Plan establishment date; however, the rates and charges will be those in effect at the time of the move or addition. If the remaining number of months for the existing term is less than either 3 months for an FRS Rate Stability Plan, or 6 months for an FRS Fixed Period Service Rate Plan, then the new service can be added as month-to-month until the expiration of the existing term or the new service can be added to the original Pricing Plan but the minimum period will be the minimum period designated by the type of Pricing Plan.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS (Cont'd)

C. Changes in Rate Plans

Services rated under the month-to-month plan or an existing fixed period service rate plan may be upgraded to a new fixed period service rate plan at any time the customer chooses without incurring nonrecurring charges, Discontinuance Charges or Termination Liability charges. This upgrade will be allowed provided the channel interface and the customer-designated premises remain the same. Additionally, the new fixed period service rate plan must meet or exceed the fixed period service rate plan being upgraded.

The monthly rates will be those in effect at the time the new fixed period begins. New minimum service periods apply to upgrades in rate plan.

If a customer chooses to change an existing service provided under a fixed period service rate plan or a rate stability plan to a month-to-month plan, the change will be treated as a discontinuance of the existing service and an establishment of new service. Appropriate Discontinuance Charges, as set forth in E., following, or Termination Liability as set forth in 8.1.5, and a new minimum period will apply in addition to the new monthly rates for the service.

D. Changes in Transmission Speed

1. Customers with the FRS Pricing Plan in service prior to May 29, 1995, may utilize Termination Liability and Waiver Policy as set forth in 8.1.5, in lieu of Changes in Transmission Speed. This offer is valid until either the expiration date of their existing term or until May 29, 1996 for a 12-month term, May 29, 1997 for a 24-month term, May 29, 1998 for a 36-month term, May 29, 2000 for a 60-month term, May 29, 2001 for a 72-month term and May 29, 2002 for a 84-month term, whichever comes first. After May 29, 1995 Termination Liability and Waiver Policy will be in effect for all new customers subscribing to the FRS Pricing Plan.

Certain material previously found on this page can now be found on Page 8-338.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS

D. Changes in Transmission Speed (Cont'd)

2. Should the customer choose to change the service provided under a fixed period service rate plan or a rate stability plan to an equal or greater transmission speed FRS or other Company service (e.g., 56 kbps FRS to 56 kbps Digital Data Service, 56 or 64 kbps FRS to 64 kbps Digital Data Service or to 1.544 Mbps FRS or DS1 Service), discontinuance charges will not apply, provided all the following conditions are met:

- Both the existing service and the new service are provided solely by the Company,
- The customer's request for disconnect of the existing service and the request for new connect of the new service are received at the same time,
- The new service is provided between the same customer locations as the discontinued service, except as set forth in F., following,
- The new fixed period meets or exceeds the remaining length of the existing fixed period being discontinued[1], and
- The total monthly rate of the new service is equal to or greater than the total monthly rate of the existing service.

3. All changes in transmission speed are subject to the availability of service. The monthly rates for the new service and/or service elements will be those rates in effect at the time the service is changed. Related nonrecurring charges apply for the change and are the charges in effect at the time the service is changed.

4. Should the order to change transmission speed exclude one or more of the conditions above, it will be treated as a discontinuance of the existing service and the establishment of a new service. All outstanding minimum period charges and discontinuance charges, as set forth in E., following, will apply.

[1] On the effective date of this Tariff, RSP subscribers must change to a fixed period service rate plan, which meets or exceeds the remaining length of the existing RSP being discontinued.

Certain material on this page formerly appeared on Page 8-73 and 8-74.
Certain material previously found on this page can now be found on Page 8-339.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS (Cont'd)

E. Discontinuance of Service

Discontinuance charges apply if the customer chooses to discontinue all or a portion of the service, equaling more than 20% of the total monthly rate, prior to the expiration of the fixed period service. A minimum billing level of 80% of the total monthly rates will be used to calculate discontinuance charges. The minimum billing level is based on the monthly rate as of the service established date, plus any additions to the service after the service established date.

Customers with the FRS Pricing Plan in service prior to May 29, 1995 may utilize Termination Liability and Waiver Policy as set forth in 8.1.5, in lieu of Discontinuance Charges in 1., following. This offer is valid until either the expiration date of their existing term or until May 29, 1996 for a 12-month term, May 29, 1997 for a 24-month term, May 29, 1998 for a 36-month term, May 29, 1999 for a 48-month term, May 29, 2000 for a 60-month term, May 29, 2001 for a 72-month term and May 29, 2002 for a 84-month term, whichever comes first. After May 29, 1995, Termination Liability and Waiver Policy will be in effect for all new customers subscribing to the FRS Pricing Plan.

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS

E. Discontinuance of Service (Cont'd)

1. Rate Stability Plan

After May 29, 1995, the Rate Stability Plan is no longer available for new subscribers.

Should the customer choose to discontinue service provided under the rate stability plan prior to the completion of the minimum service period of 3 months, a discontinuance charge will apply. The discontinuance charge is 80% (minimum billing level) of the total monthly rates for the remaining months of the minimum service period, plus 10% of the minimum billing level for the remaining term of the fixed period.

Should the customer choose to discontinue the rate stability plan after the minimum service period but before the completion of the fixed period, a discontinuance charge equal to 10% of the minimum billing level for the remaining term of the fixed period will apply. For example, if a customer chooses to discontinue service after 33 months of a 60-month fixed period, the discontinuance charge will be .10 multiplied by 27 months, multiplied by the minimum billing level.

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS

E.1. (Cont'd)

(T)(M)

(T)

If, by discontinuing a portion of the service provided under a rate stability plan, a customer's total monthly billing level falls below the minimum billing level, which shall include any additions to the service, a discontinuance charge, as set forth preceding, will apply only to the portion of the service being discontinued.

2. Fixed Period Service Rate Plan

(T)

Should the customer choose to discontinue fixed period service rate plan prior to the completion of the minimum service period of 6 months, discontinuance charges will apply. The discontinuance charge is 80% (minimum billing level) of the total monthly rates for the remaining months of the minimum service period, plus 40% of the minimum billing level for the remaining portion of the fixed period service.

(T)

Should the customer choose to discontinue fixed period service rate plan after the minimum service period but before the completion of the fixed period, discontinuance charges will apply. Discontinuance charges equal to 40% of the minimum billing level for the remaining portion of the fixed period service will apply. For example, if a customer chooses to discontinue service after 33 months of a 60-month fixed period, the discontinuance charges would be 0.40 multiplied by 27 months, multiplied by the minimum billing level.

(T)

If, by discontinuing a portion of the service provided under a fixed period service rate plan, a customer's total monthly billing level falls below the minimum billing level, which shall include any additions to the service, a discontinuance charge, as set forth preceding, will apply only to the portion of the service being discontinued.

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS

E.2. (Cont'd)

(T)(M)

(T)

If a customer chooses to change an existing service offered under a fixed period service rate plan to a rate stability plan or to a month-to-month plan, the change will be treated as a discontinuance of the existing service and an establishment of new service. Appropriate discontinuance charges, a new minimum period and related nonrecurring charges for establishment of the new service will apply in addition to the new monthly rates for the service.

(T)

(T)

3. Discontinuance charges do not apply to fixed period services purchased by local, State or Federal government entities, or to customers who have purchased services solely for resale to local, State or Federal government entities, when they are discontinued prior to the completion of the fixed period service only when all of the following conditions are met:

(T)

(T)

- The service(s) purchased by the local, State or Federal government entity or by customers that have purchased services for resale to local, State or Federal government entities are utilized solely for provision of services for that local, State or Federal government entity,
- Funding for the fixed period service ordered by the authorized local, State or Federal government entity is included in the budget request for each fiscal period appropriation sufficient to cover the authorized local, State or Federal government entity's obligations under the fixed period service for that fiscal period,
- Nonappropriation may not be used as a means of terminating the service to acquire a functionally similar product or service,

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS

E.3. (Cont'd)

- The local, State or Federal government entity ordered the fixed period service under the good faith belief that moneys in amounts sufficient to discharge its obligations could and would lawfully be appropriated and be made available for this purpose and,
- The local, State or Federal government entity or the customer who ordered the service on their behalf, must provide the Company notarized documents agreed upon by both the Company and the customer, showing that the entity is allotted insufficient funds for the remainder of the then current fiscal period (or for a succeeding fiscal period) by appropriation, appropriation limitation or grant to continue payments under the fixed period service and has no other funding source lawfully available to it for such purpose. The fixed period service may be terminated by giving the Company not less than 30 days written notice. Should the customer receive funding for the cancelled service prior to physical disconnect of service, the customer may cancel the disconnect order per Section 5. Upon termination, the local, State or Federal government entity or the customer who ordered the service on their behalf, shall pay all applicable rates and nonrecurring charges of the fixed period service incurred through the date of termination and through the end of the then current fiscal period to the extent of lawfully available funds.

8. ADVANCED COMMUNICATIONS NETWORKS

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS (Cont'd)

F. Moves to a Different Building Utilizing Portability

Portability allows FRS ordered under a Pricing Plan to move to a different building without incurring discontinuance charges or establishing new minimum service periods. Applicable nonrecurring charges apply to move the service.

1. Portability without upgrade in transmission speed

A customer with existing FRS may choose to move either a portion of or the entire existing service or move and change their FRS to another Company service without incurring discontinuance charges provided the following conditions are met:

- Both the existing and the new service are provided solely by the Company,
- The new service has a speed equal to the speed of the disconnected service,
- The customer's request for both the disconnect order for the existing service and the new connect order for the new service are received at the same time and must specifically reference the application of Portability,
- The customer's request for the disconnect order for the existing service must reference the new connect order, and
- The due date of the new connect order must be within 30 days of the due date of the disconnect order.

F.1. (Cont'd)

(T)(M)

(T)

The monthly rates for the new service will be those rates in effect at the time the service is installed at the new location. All nonrecurring charges apply for the new service. Should changes to either the disconnect order or the new connect order for Portability exclude one or more of the conditions above, applicable discontinuance charges will be assessed. The rates, charges and regulations for changes from FRS to other Company services are as specified in other sections of this Tariff.

For FRS provided under VTPP, the existing term or fixed period may be utilized for the FRS at the new location, provided the remaining number of months of the existing term is at least the minimum period of the VTPP (i.e., three months for an FRS Rate Stability Plan, or six months for an FRS Fixed Period Service Rate Plan). If the remaining number of months for the existing term is less than the associated minimum period, then the remaining number of months for the existing term at the new location shall be extended to either three months for an FRS Rate Stability Plan, or six months for an FRS Fixed Period Service Rate Plan.

8.3 FRAME RELAY SERVICE

8.3.4 PRICING PLANS

F. Moves to a Different Building Utilizing Portability (Cont'd)

2. Portability with upgrade in transmission speed

Customers with FRS Pricing Plans in service prior to May 29, 1995, may utilize Portability with upgrade in transmission speed until the end of their existing term, or may utilize the Termination Liability and Waiver Policy as set forth in 8.1.5, following. At the expiration of their existing Pricing Plan, the Termination Liability and Waiver Policy must be utilized for moves to a different building with an upgrade in transmission speed.

A customer with existing FRS may choose to move the existing service and upgrade to another higher speed FRS or to another higher speed service provided by the Company without incurring discontinuance charges provided the following conditions are met:

- Both the existing and the new services are provided solely by the Company,
- The customer's request for the disconnect order for the existing service and the new connect order for the new service are received at the same time and must specifically reference the application of Portability and upgrade in capacity,
- The customer's request for the disconnect order for the existing service must reference the new connect order, and
- The due date of the new connect order must be within 30 days of the due date of the disconnect order.

(T)(M)

(T)

For FRS provided under Pricing Plans, the term or fixed period for the existing FRS may continue to be the same term for the FRS at the new location, provided the remaining number of months of the existing plan is at least the minimum period of the existing Pricing Plan (i.e., three months for an FRS Rate Stability Plan, or six months for an FRS Fixed Period Service Rate Plan). If the remaining number of months for the existing Pricing Plan is less than the associated minimum period, then the minimum period for the new service shall be three months for an FRS Rate Stability Plan, or six months for an FRS Fixed Period Service Rate Plan.

(T)

The monthly rates for the new service will be those rates in effect at the time the new upgraded service is installed. Should changes to either the disconnect order or the new connect order for Portability exclude one or more of the conditions above, applicable discontinuance charges will be assessed. The rates, charges and regulations for changes from FRS to other Company services are as specified in other sections of this Tariff.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

A. Description

QWEST DSL Service utilizes Asynchronous Transfer Mode (ATM) technology over dedicated transport facilities, Asymmetrical Digital Subscriber Line (ADSL) technology over a Company-provided metallic local loop at a single physical location and *QWEST DSL* ISDN Digital Subscriber Line Service (IDSL) technology over Company-provided 2-wire, private line facilities to provide customers with high speed data services. Qwest DSL Service is comprised of *QWEST DSL* Service, *QWEST DSL HOST* Service and *QWEST IDSL*. (C)

QWEST DSL Service utilizes customer-provided equipment, located at the customer's premises, and Company-provided equipment, at Company Central Offices, to allow the Company to accept traffic from the customer and then separate and send bi-directional voice and data transmissions to the designated, separate voice and data networks. With the deployment of "Discrete Multitone" (DMT) technology April 4, 2001 and with the grandfathering *QWEST DSL SELECT* on June 14, 2001, "Carrierless Amplitude/Phase Modulation Protocol" (CAP) technology will no longer be offered as new service. (C)

Each *QWEST DSL* Service must be connected to a *QWEST DSL HOST* Service. The data connection from the *QWEST DSL* location to the *QWEST DSL HOST* location is a dedicated virtual point-to-point connection across a shared backbone network, ATM Service.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

A. Description (Cont'd)

QWEST IDSL provides a data only, 2-wire, private line service with a bi-directional data transmission capacity of 128 kbps or 144 kbps. Each *QWEST IDSL* must be connected to a *QWEST DSL HOST* Service. The data connection from the *QWEST IDSL* location to the *QWEST DSL HOST* location is a dedicated virtual point-to-point connection across a shared backbone network, ATM Service. (T)

QWEST DSL HOST Service aggregates multiple data streams into a single host site using peak transmission speeds of 1.544 Mbps, and 3 Mbps up to 45 Mbps, in 3 Mbps increments.

Technical Specifications for *QWEST DSL* Service are delineated in Qwest Corporation Technical Publications PUB 77392 and PUB 77399.

The offering of *QWEST DSL* Service contemplates the use of existing ADSL, IDSL and ATM facilities. There may be occasions where *QWEST DSL* Service is not available due to facility limitations or where it may be necessary to construct such facilities. If Special Construction is involved the regulations as set forth in Tariff F.C.C. No. 2 apply. (T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

A. Description (Cont'd)

During the Company's network maintenance and software update period, it may be necessary to temporarily place *QWEST DSL Service* central office equipment out of service. The Company also reserves the right to temporarily interrupt *QWEST DSL Service* at other times in emergency situations.

QWEST DSL Service is available in specific wire center locations where the Company has established ADSL, IDSL and ATM technology as specified in the National Exchange Carrier Association Tariff F.C.C. No. 4. Availability of ADSL or IDSL in a wire center does not guarantee customer access to any or all speeds.

(T)

The Company will qualify copper facilities to determine the suitability of such facilities for *QWEST DSL Service*. The Company will not provide *QWEST DSL Service* on copper facilities that are unsuitable for the Service. Nor will the Company provide *QWEST DSL Service* if it determines that such provision will produce interference to other services.

QWEST DSL Service and *QWEST IDSL Service* will be provided subject to the availability and limitations of Company wire centers and outside plant facilities.

The customer is responsible for providing and installing all compatible customer provided equipment (CPE). Compatibility requirements are delineated in Qwest Corporation Technical Publication PUB 77392 and 77399. The modem must support customer-selected services.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

(T)

8.4.1 GENERAL (Cont'd)

B. Service Elements

1. QWEST DSL Service Charge

(T)

The *QWEST DSL* Service Charge uses ADSL technology, which permits simultaneous data over voice service using the same Company-provided flat-rated local exchange line. All *QWEST DSL* Services are provided as dedicated connections, except the 256 kbps service which is offered as either a dedicated connection or as a per session connection. A dedicated connection provides a modem devoted specifically to the customer whereas a per-session connection utilizes pooled modems, however both services while connected offer equivalent performance.

(T)

(T)

Unlike dedicated connection customers, per session connection customers must vie for a modem in the pool and the potential for a busy state exists. The Company will limit each session connect time, but will ensure a session of no less than one hour but no more than four hours, with all customers having the same maximum session time. The Company will not change the maximum session time more than once a month. A per session connection customer can expect to establish a connection within one to two hours of the initial attempt.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

B.1 (Cont'd)

Customers who purchase *QWEST DSL* Service will receive DMT protocol. All *CAP QWEST DSL* Services are grandfathered as of April 4, 2001, except *CAP QWEST DSL SELECT* which is grandfathered as of June 14, 2001. Customers who purchased *QWEST DSL* Service with CAP protocol prior to the respective grandfather dates will retain this service. CAP protocol is not capable of providing the precise service speeds as defined below for DMT protocol.

(C)

(C)

DMT *QWEST DSL* is available in 3 categories: *QWEST DSL 256*, *QWEST DSL DELUXE* and *QWEST DSL PRO* (Professional). *QWEST DSL PRO* is available from 256 kbps up to 7 Mbps (Down Stream) and includes Installation and Service Guarantees as set forth in D. and E., following.

(C)

DMT RATE ELEMENTS	DOWN STREAM CONNECTION SPEED	UP STREAM CONNECTION SPEED	TYPE[1]
<i>QWEST DSL 256</i>	256 kbps	128 kbps up to 256 kbps	Dedicated
<i>QWEST DSL DELUXE</i>	256 up to 640 kbps	128 kbps up to 256 kbps	Dedicated
<i>QWEST DSL PRO DELUXE</i>	256 up to 640 kbps	128 kbps up to 256 kbps	Dedicated
<i>QWEST DSL PRO 640 KBPS</i>	640 kbps	128 kbps up to 640 kbps	Dedicated
<i>QWEST DSL PRO 1 MBPS</i>	1.024 Mbps	128 kbps up to 1.024 Mbps	Dedicated
<i>QWEST DSL PRO 4 MBPS</i>	4.0 Mbps	128 kbps up to 1.024 Mbps	Dedicated
<i>QWEST DSL PRO 7 MBPS</i>	7.0 Mbps	128 kbps up to 1.024 Mbps	Dedicated

(N)

(N)

[1] Upstream speeds will be set to allow the maximum speed within the range. Actual connection speed may be limited by the physical condition of the customer's line.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

B.1 (Cont'd)

CAP *QWEST DSL DELUXE* and CAP *QWEST DSL PRO* are grandfathered service categories as of April 4, 2001, and CAP *QWEST DSL SELECT* [1] is grandfathered as of June 14, 2001. Existing customers of CAP *QWEST DSL* Services will be able to change the destination of their service, however any other changes, including speed changes, will require the customer to migrate to DMT *QWEST DSL* or completely disconnect service. CAP *QWEST DSL PRO* for existing customers includes Service Guarantees as set forth in 8.4.1.

(C)
|
(C)

CAP RATE ELEMENTS	DOWN STREAM CONNECTION SPEED	UP STREAM CONNECTION SPEED	TYPE
<i>QWEST DSL SELECT</i>	256 up to 640 kbps	272	Per Session
<i>QWEST DSL DELUXE</i>	256 up to 640 kbps	272	Dedicated
<i>QWEST DSL PRO DELUXE</i>	256 up to 640 kbps	272	Dedicated
<i>QWEST DSL PRO 640 KBPS</i>	640 kbps	544	Dedicated
<i>QWEST DSL PRO 960 KBPS</i>	960 kbps	816	Dedicated
<i>QWEST DSL PRO 1.2 MBPS</i>	1.280 Mbps	1088	Dedicated

<i>QWEST DSL PRO 7 MBPS</i>	7.168 Mbps	1088	Dedicated

- [1] *QWEST DSL SELECT* is provisioned independent of DMT capacity and cannot use Dedicated DMT-based capacity. In the event an order for *QWEST DSL SELECT* Service is delayed for Company reasons, the customer will have the option of subscribing to a new DMT dedicated service and receiving a onetime credit of \$30. The \$30 credit will only be available if the *QWEST DSL SELECT* is delayed for Company reasons and the order is placed on or before June 13, 2001. This offer may be combined with other *DSL* Promotion.

(C)

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

B. Service Elements (Cont'd)

2. QWEST DSL HOST Service

a. QWEST DSL HOST Ports (BSE) [1]

The *QWEST DSL HOST* Port is a Port on an ATM switch at the serving wire center or *QWEST DSL HOST* Service Point. This element applies in conjunction with the 1.544 or 44.736 Mbps Private Line Transport *QWEST DSL HOST* Access Link, and the 44.736 Mbps ATM or 155.52 Mbps Optical Access Link.

The types of Ports which may be used with *QWEST DSL HOST* Service are:

- **10BaseT Interface**

A 10BaseT interface connects a customer's *QWEST DSL HOST* (hub) location to a *QWEST DSL HOST* Services Access Link. 10BaseT interfaces are available with peak Port speeds of 1.544 Mbps, 3 Mbps, 6 Mbps, or 9 Mbps.

- **100BaseT Interface**

A 100BaseT interface connects a customer's *QWEST DSL HOST* (hub) location to a *QWEST DSL HOST* Services Access Link. 100BaseT interfaces are available with peak port speeds of 3 Mbps to 44.736 Mbps, in 3 Mbps increments.

[1] A 44.736 Mbps or 155.52 Mbps ATM Port may be used by customers with existing ATM Service for a *QWEST DSL HOST* Port.

(T)
(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

B.2.a.[1] (Cont'd)

- 1.544 Mbps *QWEST DSL HOST* Port
- 44.736 Mbps *QWEST DSL HOST* Port. This port is capable of terminating *QWEST DSL HOST* Access Links with a bandwidth of 3 Mbps up through 44.736 Mbps, in 3 Mbps increments. [2]
 - A 44.736 Mbps ATM Port [1,2] (T)
 - 155.52 Mbps ATM Port [1,2] (T)

[1] A 44.736 Mbps or 155.52 Mbps ATM Port may be used by customers with existing ATM Service for a *QWEST DSL HOST* Port. (T)

[2] A minimum of one 3 Mbps bandwidth increment applies for each 44.736 Mbps *QWEST DSL HOST* Port, and for each 44.736 Mbps or 155.52 Mbps ATM Port used for *QWEST DSL HOST* Port. (T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

B.2. (Cont'd)

b. QWEST DSL HOST Access Links

QWEST DSL HOST Access Links are a physical transport facility that transmits data from the customer site to a *QWEST DSL HOST* Service Point within the ATM Network. *QWEST DSL HOST* Access Links can be comprised of ATM Optical Access Links or Private Line Transport Services. If the serving wire center of the *QWEST DSL HOST* customer location is a *QWEST DSL HOST* Service Point, then Private Line Transport Mileage does not apply. Private Line Transport Services Mileage applies if the serving wire center of the *QWEST DSL HOST* customer location is not a *QWEST DSL HOST* Service Point. If the *QWEST DSL HOST* Access Link is a Meet Point arrangement the Transport Mileage will be calculated to the actual ATM switch location.

The types of *QWEST DSL HOST* Access Links are following:

- A 1.544 Mbps, Clear Channel DS1 Private Line Transport Services Channel Termination, as set forth in Section 7, preceding.
- A 44.736 Mbps DS3 Private Line Transport Services Channel Termination, as set forth in Section 7, preceding.
- A 44.736 Mbps or 155.52 ATM Optical Access Link (OAL).

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.1 GENERAL

B.2. (Cont'd)

c. Central Office Connecting Channel (COCC)

A COCC provides the ongoing interconnection from the *QWEST DSL HOST* Port to a DS1 or DS3 Service Channel Termination.

d. Service Points

Service Points are geographic locations designated by the Company where the *QWEST DSL HOST* Port can be accessed. The *QWEST DSL HOST* Port utilizes the ATM Service Points, which are listed in the National Exchange Carrier Association Tariff F.C.C. No. 4. (T)

e. Bandwidth

Bandwidth transports *QWEST DSL HOST* data transmission through the ATM Network, at rates from 3 Mbps to 44.736 Mbps, in 3 Mbps increments. A minimum of one 3 Mbps increment of *QWEST DSL HOST* bandwidth is required for each 44.736 Mbps *QWEST DSL HOST* Port or for each 44.736 Mbps ATM Port or 155.52 Mbps ATM Port used as a *QWEST DSL HOST* Port.

QWEST DSL HOST Service can terminate/aggregate both DMT and CAP protocol based *QWEST DSL*, ADSL, traffic.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

(T)

8.4.1 GENERAL

B. Service Elements (Cont'd)

3. QWEST IDSL

(T)

a. Channel Termination

The Channel Termination provides for a data only, 2-wire, private line path between the Customer designated premises and the serving wire center of that premises. Included as a part of the Channel Termination is a standard interface arrangement which defines the technical characteristics associated with the type of facilities to which the access service is to be connected at the Point of Termination (POT) and the type of signaling capability. One Channel Termination charge applies at the serving wire center of the Customer's designated premises where the channel terminates.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE (Cont'd)

(T)

8.4.2 REGULATIONS

A. QWEST DSL HOST Service

(T)

QWEST DSL HOST Service must be initially ordered as one of the fixed service periods as set forth in 8.4.4; however, at the completion of the initial fixed period, the customer may elect the month-to-month option for that service configuration, or may elect any of the fixed service periods.

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.2 REGULATIONS (Cont'd)

B. Obligations of the Customer

1. When a customer orders *QWEST DSL* Service, the customer must provide compatible customer premises equipment (CPE). In addition, the customer must specify the Company-provided flat-rated local exchange Telecommunications Number (TN) to be used.
2. When a customer orders *QWEST DSL HOST* Service, the customer must provide the necessary information (e.g., Data Link Connection Identifier(s), and/or Internet Protocol) to provision *QWEST DSL HOST* Service using Company ATM Service.
3. The customer may request a design change to the service ordered. A design change is any change which requires engineering review. Design changes do not include a change of customer premises, end user premises or *QWEST DSL HOST* Access Link speeds. Changes of this nature will require the issuance of a new order and a cancellation of the original order. Cancellation charges are set forth in 5.2.3, preceding. Changes in *QWEST DSL* Service and *QWEST IDSL* which result in the service(s) pointing to a different *QWEST DSL HOST* Access Link are design changes and subject to the Design Change charge as set forth in 5.2.2, preceding. Changes requested on the Plant Test Date (PTD) or later will require the issuance of a new order.
4. Changes in *QWEST DSL* Service and *QWEST IDSL* Service speeds will result in a Speed Change Charge as set forth in 8.4.5.A., following.

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE (T)

8.4.2 REGULATIONS (Cont'd)

C. Installation Guarantee QWEST DSL PRO (T)

In the event network difficulties develop during the installation of *QWEST DSL PRO* offerings, the Company guarantees resolution within five business days. Inability to resolve the problem within five business days will afford the customer a credit for one month of recurring charges. The credit will appear on the customer's next month's bill. (T)

D. Service Guarantee QWEST DSL PRO (T)

1. Satisfaction Assurance

The Company is committed to providing the customer with a satisfactory experience when subscribing to the *QWEST DSL PRO* offerings. If the customer cancels service within 30 days after installation due to dissatisfaction, the Company will refund any recurring and nonrecurring charges accrued and waive Termination Liability. (T)

2. Service Assurance

In the event the *QWEST DSL PRO* offerings are out of service 3 times in a 30 day period and the trouble is found to be in the customer's line, the customer may request to cancel service without having to pay any Termination Liability. This Service Assurance is not inclusive of service issues associated with the customer's modem or Internet Service Provider. (T)

3. Line Connect Speed Assurance

QWEST DSL PRO offerings are designed to deliver the line speed ordered by the subscriber. However, if the *QWEST DSL PRO* line connection speed cannot be maintained to the customer's satisfaction, the Company will at the customer's request, change the customer's speed to a lower speed without assessing the Speed/Destination Channel Change Charge. (T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 *QWEST DSL* SERVICE (Cont'd) (T)

8.4.3 RATE ELEMENTS

A. *QWEST DSL* Service Charge (T)

A nonrecurring charge and a monthly rate apply per termination. If a customer requests a different ADSL speed and/or a change in their designated *QWEST DSL HOST* location, a change charge for Speed/Destination Channel Change applies per order. If a customer changes from a dedicated connection to a per session connection or vice versa, a change charge for Change from Dedicated to Per Session Connection applies. (T)

When a change in speed or destination channel is requested at the same time as a change from a dedicated to a shared connection, or vice versa, only the higher of the *QWEST DSL* Change Charges applies. (T)

B. QWEST DSL HOST Service

1. Port (BSE)

A nonrecurring charge and monthly rate apply for each 1.5 Mbps *QWEST DSL HOST* Port. For a 44.736 Mbps *QWEST DSL HOST* Port, a nonrecurring charge and monthly rate apply for the initial Port and an additional recurring rate applies for each bandwidth increment of 3 Mbps.

2. Access Link

The rates and charges for other Company-provided services used as access links for *QWEST DSL HOST* Service are in addition to the rates and charges for the *QWEST DSL HOST* Port. A DS1 Service and/or DS3 Service channel termination may be purchased by the customer, as set forth in Private Line Transport Services Section 7 and/or 17. ATM Optical Access Links may be purchased by the customer at either 44.736 Mbps or 155 Mbps with up to 4 Host names associated with a single link, as set forth in 8.5.1. (C)

3. Port Change Charge

A nonrecurring charge applies each time a customer changes bandwidth on a *QWEST DSL HOST* or ATM Port, subsequent to the initial installation, e.g., for a change from 3 Mbps to 9 Mbps, one change charge applies. A nonrecurring charge also applies when adding or changing *QWEST DSL HOST* bandwidth increments to an existing 44.736 Mbps or 155.52 Mbps ATM Port.

An upgrade of port speeds 1.544 Mbps, 44.736 Mbps, or 155.52 Mbps requires a change of Access Link as well and will be considered a discontinuance of one service and establishment of new service.

Downgrades in port speeds 1.544 Mbps, 44.736 Mbps, or 155.52 Mbps requires a change of Access Link as well and will be considered a discontinuance of one service and establishment of new service. In addition Termination Liability and Waiver Policy will be applicable for downgrades.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.3 RATE ELEMENTS SERVICE

B. QWEST DSL HOST Service (Cont'd)

4. Central Office Connecting Channel (COCC)

One Central Office Connecting Channel nonrecurring charge and monthly rate applies per connection. The rates and charges for a DS1 Service and DS3 Service COCC are set forth in Section 7 and/or 17.

(C)
(C)

5. Bandwidth

A monthly rate applies for each 3 Mbps increment of Bandwidth, up through 45 Mbps. A minimum of one 3 Mbps increment of Bandwidth applies for each 45 Mbps *QWEST DSL HOST* Port.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE (Cont'd)

8.4.4 PRICING PLANS

A. Pricing Plan Terms and Conditions

1. *QWEST DSL* Service may be ordered on a month-to-month or on a Fixed Period Service Rate Plan for 12, 36 or 60 months at the rates set forth in 8.4.5, following. Exception: as of August 7, 2001, *QWEST DSL DELUXE* will no longer offer Fixed Period Service Rate Plans for 12, 36, or 60 months to new customers or for renewal once existing plans reach termination. (C)
|
(C)
2. *QWEST DSL* Volume Plan provides *QWEST DSL HOST* customers discounted rates if they agree to the conditions of either the Basic Discount Option or one of the Volume Commitment Options.
 - The Basic Discount Option is for the customer who commit to having a minimum of 15,000 active and billable *QWEST DSL* lines by the end of their initial 12 month period. The initial 12 month period will start on the date the customer has the first *QWEST DSL* line installed.
 - The Volume Commitment Option I plan allows the customer to choose the number of *QWEST DSL* lines they will acquire over the 36 month Fixed Period Service Rate Plan with a subscription range of 60,001 lines to 400,000 lines.
 - The Volume Commitment Option II plan allows the customer to choose a 5-year Fixed Period Service Rate Plan with a minimum commitment of 150,000 subscription lines by the end of the first year and a minimum 200,001 subscription lines as of the end of the third, fourth and fifth year periods. If the customer has paid the Company for 4 million months of service by the end of the third year, the customer will be considered to have met all commitment levels. The months of service are calculated as follows:
 - Number of DSL lines times the number of months the services are active and billing, equals months of service.
 - Example: 25,000 DSL lines per month times 12 months equals 300,000 months of service during a year.
 - The Volume Commitment Option III plan allows the customer to choose the number of *QWEST DSL* lines they will acquire over the 60-month Fixed Period Service Rate Plan with a subscription range of 120,000 lines to 500,000 lines.

8. ADVANCED COMMUNICATIONS NETWORKS

8.4 QWEST DSL SERVICE

8.4.4 PRICING PLANS

A.2. (Cont'd)

The TLA addresses specific terms and conditions for each plan as set forth in 8.1.5, preceding.

Volume Commitment Options I, II and III are applicable to monthly rates only. The discounts are calculated on the month-to-month *QWEST DSL* Service rates as set forth in 8.4.5, following. Nonrecurring charges will not be discounted for Volume Commitment Option I and nonrecurring charges for Volume Commitment Option II will not apply. Volume Commitment Option I is available on a 36 month Fixed Period Rate Plan and Volume Commitment Options II and III are available on a 60 month Fixed Period Service Rate.

- Obligations of customers who subscribe to *QWEST DSL* Volume Plans:
 - Must purchase *QWEST DSL HOST* Service in all LATAs where the customer subscribes to *QWEST DSL* Service
 - Must submit orders to the Company electronically in a format and manner designated by the Company
 - Must provide customer premises equipment to its end users
 - Must deal directly with its end users and be solely liable with respect to all matters relating to the service, including marketing, ordering, technical support, billing and collections
 - Must direct end users not to contact the Company regarding any aspect of the service
 - Must communicate an end user's request to disconnect *QWEST DSL* Service to the Company within two business days of end user's notification to the customer purchasing under any *QWEST DSL* Volume Plan
- The telecommunications services offered under the *QWEST DSL* Volume Plan are provided at wholesale to carriers and non-carriers. The telecommunications services offered under the *QWEST DSL* Volume Plan are not services that the Company provides at retail, and, accordingly, are not subject to the rate provisions of Sections 251 (c) (4) and 252 (d) (3) of the Communications Act, 47 U.S.C. §§ 251 (c) (4), 252 (d) (3).

8.4 QWEST DSL SERVICE

8.4.4 PRICING PLANS

A. Pricing Plan Terms and Conditions (Cont'd)

3. *QWEST DSL HOST* Service and *QWEST IDSL* must be initially ordered under a Fixed Period Service Rate Plan. At the end of the initial service period, the service may be obtained on a month-to-month basis or any of the specified fixed period service rate periods. The customer may order a Fixed Period Service Rate Plan for 12, 36 or 60 months at the rates set forth in 8.4.5, following.
4. Monthly rates for the entire fixed period will be stabilized from Company-initiated increases, at the rates in effect for the fixed period on the service date. The customer must specify the length of the fixed period at the time the service is ordered. The minimum service period for a *QWEST DSL*, *QWEST IDSL* or *QWEST DSL HOST* fixed period service rate plan is 12 months.
5. *QWEST DSL HOST* Service rate elements may be ordered under any optional rate plan. For example, the customer may order the Access Link under the 36-month fixed period service rate plan and the *QWEST DSL HOST* Port under the 60-month fixed period service rate plan.
6. When a customer with ISDN or *QWEST IDSL* Service migrates to a *QWEST DSL* Service at the same address of record a nonrecurring charge will not apply. In addition, TLA will be waived if a *QWEST IDSL* customer migrates to *QWEST DSL* at the same address of record.
7. Fixed Period Rate Plans established on or before August 31, 1998, will automatically receive a rate decrease if the Company decreases rates during the term of the plan. Effective September 1, 1998, customers establishing a Fixed Period Rate Plan, will not receive a rate decrease if the Company decreases rates during the term of the plan.

A. Pricing Plan Terms and Conditions (Cont'd)

- | | |
|---|-----|
| 8. For Volume Commitment Option I at the end of the fixed period, the customer may select a new fixed period, convert to monthly rates (month-to-month) or terminate the service. The rates will be those in effect at the time the new fixed period begins. Should the customer not make a choice by the end of a fixed period, the service will automatically revert to the effective monthly (month-to-month) rates. If service is continued, nonrecurring charges will not apply. | (M) |
| 9. For Volume Commitment Option II upon mutual agreement at least 6 months prior to the expiration of the Initial Term, the plan may be renewed for one additional 12-month term with the same terms and conditions. | (N) |
| 10. For Volume Commitment Option III at least 30 days notice prior to the expiration of the Initial Term, the plan may be renewed for three additional 12-month terms with the same terms and conditions. | (N) |

8.4.4 PRICING PLANS

B. Changes to Rate Plans

Services rated under the month-to-month plan or an existing fixed period service rate plan may be upgraded to a fixed period service rate plan at any time the customer chooses without incurring nonrecurring charges or Termination Liability. This upgrade will be allowed provided the channel interface and the customer-designated premises remain the same. Additionally, the new fixed period service rate plan must meet or exceed the fixed period service rate plan being upgraded.

The monthly rates will be those in effect at the time the new fixed period begins. New minimum service periods apply to upgrades in rate plans.

If a customer chooses to change an existing service provided under a fixed period service rate plan to month-to-month billing, the change will be treated as a discontinuance of the existing service and an establishment of new service. Termination Liability, as set forth in 8.1.5, and a new minimum period will apply in addition to the new monthly rates for the service.

C. Discontinuance of Service

If the customer chooses to discontinue all or a portion of the service prior to the expiration of the fixed period service, Termination Liability, as set forth in 8.1.5, will apply.

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

A. Description

ATM Service is a connection-oriented communications service that uses Asynchronous Transfer Mode (ATM) technology. The service provides customers with high-speed, low-delay information transfer capacity, which supports applications that require near-real-time mixed media (data, video, image, voice) communications among multiple locations. ATM Service supports transmission speeds of 1.544 Mbps, 45 Mbps, 155 Mbps and 622 Mbps.

(T)

(T)

(C)

ATM Service offers Inverse Multiplexing over ATM (IMA). This allows a bandwidth option between DS1 (1.544 Mbps) and DS3 (45 Mbps) levels. IMA utilizes 2 to 8 DS1s and bundles them together to create a solid bandwidth increment of 3 Mbps, 4.6 Mbps, 6.1 Mbps, 7.7 Mbps, 9.2 Mbps, 10.7 Mbps or 12.3 Mbps. IMA is available over the following Service Classes Constant Bit Rate (CBR), Variable Bit Rate – non-real time (VBR-nrt) and Unspecified Bit Rate (UBR) as set forth in B.10, following.

(N)

(N)

ATM Service requires the use of customer terminal equipment that functions as a multiplexer/router/hub or ATM switch. This terminal equipment must be purchased separately from the ATM Service and must conform to industry standards. The terminal equipment accumulates customer traffic and puts it into an ATM format suitable for transmission over the ATM Service Network.

(T)

(T)

(T)

Interworking PVC (IPVC) is an available option that creates a connection between the ATM and Frame Relay Networks. Frame Relay to ATM interworking allows customers to complement the high-bandwidth transport capabilities of ATM with Frame Relay in order to provide a seamless transition to a single or multi-service network.

(N)

(N)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

A. Description (Cont'd)

ATM Service conforms to industry standards and is only provided over fiber optic facilities or other compatible private line facilities, such as Synchronous Service Transport (SST), DS3 Service or DS1 Service. Technical Specifications for ATM Service are delineated in Qwest Corporation Technical Publication PUB 77378.

(T)

(T)

A customer may request that the facilities used to provide ATM Service be specially routed. The regulations, rates and charges for Special Facilities Routing (i.e., Diversity) are as set forth in Section 11, following.

(T)

ATM connectivity between two separate LSS networks and/or between LSS and ATM Service locations can be used for LSS provisioning. The connection between the LSS/LSS or LSS/ATM Service locations can be an ATM Service virtual channel connection (VCC). VCCs for the LSS/LSS or LSS to ATM Service option are only available as Unspecified Bit Rate (UBR) for monthly or fixed period service rate plans of 12, 36 and 60 months. The VCC and UBR rate regulations and rates are as set forth in 8.5.3 and 8.5.5., following.

(T)

(T)

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL (Cont'd)

B. Service Elements

1. Network Interface

The network interface is the point at which a customer's data transmissions first enters the network supporting ATM Service. It is the point of interconnection between Company communication facilities and customer terminal equipment.

(T)

2. ATM Access Links

(C)

a. DS1 Access Link

An ATM DS1 Access Link provides DS1 physical access to the ATM Service Network, connecting customer facilities at the User-Network Interface (UNI) over DS1 Private Line Transport facilities. The transport facilities transfer information through the network over logical connections at speeds selected by the customer.

(N)

b. IMA Access Link

An IMA Access Link utilizes 2 to 8 DS1s bundled for physical access to the ATM Service Network, connecting customer facilities at the User-Network Interface (UNI) over DS1 Private Line Transport facilities. The transport facilities transfer information through the network over logical connections at speeds selected by the customer.

(N)

c. Optical Access Link (OAL)

(T)

An ATM Service Optical Access Link provides access to the ATM Service Network, connecting customer facilities at the network interface with a corresponding ATM Service Cell Transfer element. An ATM Service Optical Access Link is only available at ATM Service Points. An ATM Service Optical Access Link may be optioned with 45 or 155 Mbps OAL Protection as set forth in 9., following.

(T)

(T)

(T)

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B. 2. ATM Access Links (Cont'd)

d. Stand-Alone Optical Access Link (SAOAL)

(T)(M)

An ATM Service Stand-Alone Optical Access Link connects customer facilities to ATM networks provided by service providers other than the Company. Private line transport mileage and/or a Central Office Connecting Channel (COCC) may be required in conjunction with a SAOAL in order to connect the customer's serving wire center, or node, with the serving wire center, or node of another ATM Service provider. A SAOAL may be optioned with 45 or 155 Mbps OAL Protection as set forth in 10., following.

(T)

(T)

(T)

(M)

3. ATM and IMA Ports

(C)

ATM and IMA ports are the physical entry points into the ATM Service Network for Optical Access Links or other compatible private line facilities, such as Synchronous Service Transport (SST), DS3 Service or DS1 Service. They are the originating and terminating points for Virtual Path Connections and Virtual Channel Connections. Ports include the electronic equipment used in connecting these service elements to the ATM Service Network. They enable customers to allocate bandwidth to applications at customer-designated transmission speeds of up to 1.544 Mbps, 3 Mbps, 4.6 Mbps, 6.1 Mbps, 7.7 Mbps, 9.2 Mbps, 10.7 Mbps, 12.3 Mbps, 45 Mbps, 155 Mbps or 622 Mbps.

(C)

(C)

(C)

The customer may also utilize a 44.736 Mbps *QWEST DSL HOST* Port in lieu of a 44.736 Mbps ATM Service Port, as set forth in 8.4.5. Customers will be able to allocate ATM bandwidth to applications at customer-designated transmission speed of 44.736 Mbps for their *QWEST DSL HOST* Port.

4. Service Points

(T)

Service Points are geographic locations designated by the Company where the ATM Service Network can be accessed. The ATM Service Points are listed in the National Exchange Carrier Association Tariff FCC No. 4.

Certain material on this page formerly appeared on Page 8-318.

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B. Service Elements (Cont'd)

5. Logical Connections

(T)

ATM Service logical connections function as bidirectional Permanent Virtual Connections (PVCs). ATM Service supports a point-to-point logical connection configuration between two ports. Logical Connections (PVCs) may be any of five Service Classes: Constant Bit Rate (CBR), Variable Bit Rate – real time (VBR-rt) and Variable Bit Rate – non-real time (VBR-nrt), Available Bit Rate (ABR) or Unspecified Bit Rate (UBR).

(T)

(T)

(C)

|

(C)

a. Virtual Channel Connections (VCC)

A VCC is a logical connection from one ATM Service Port to another ATM Service Port within the ATM Network.

(T)

(T)

VCCs are available with all Service Classes at selected Cell Transfer speed(s) depending on the customer's networking requirements which include appropriate overheads.

(C)

b. Virtual Path Connections (VPC)

A VPC is a collection of VCCs routed together as one unit, for which the customer has the ability to manage the speeds of the individual VCCs within the customer-designated Cell Transfer element.

VPCs are available as Constant Bit Rate (CBR) at customer-selected Cell Transfer speed(s), depending on the customer's networking requirements, which include appropriate overheads.

(C)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B.5. (Cont'd)

(T)

- c. Logical connections are available at base speeds (64 kbps, 75 kbps, 1 Mbps or 1.787 Mbps) determined by the speed of the ATM and IMA Ports and the Service Classes selected (1.544 Mbps, 3 Mbps, 4.6 Mbps, 6.1 Mbps, 7.7 Mbps, 9.2 Mbps, 10.7 Mbps, 12.3 Mbps, 45 Mbps, 155 Mbps or 622 Mbps). The customer selects a base speed for each VCC or VPC they purchase which includes appropriate overheads. The bandwidth for each VCC or VPC is determined by multiplying the base speed by the number of increments of the base speed selected by the customer, 64 kbps is available up to 1.544 Mbps only. Technical Specifications for ATM Service are delineated in Qwest Corporation Technical Publication PUB 77378.

(C)

—

(C)

(C)

(T)

Logical connections are available at the following incremental base speeds:

CELL TRANSFER RATES OF SPEED:

(C)

- Constant Bit Rate (CBR)
 - 64 kbps
 - 75 kbps
 - 1 Mbps
 - 1.787 Mbps
- Variable Bit Rate – real time (VBR-rt), Variable Bit Rate – non-real time (VBR-nrt), and Available Bit Rate (ABR) and Unspecified Bit Rate (UBR)
 - 64 kbps
 - 1 Mbps

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B.5.c. (Cont'd)

(T)

A customer may select multiple logical connections of different service classes on an ATM Service Port. The maximum speed of a single logical connection may not exceed 40.7 Mbps on a 45 Mbps port, 149 Mbps on a 155 Mbps port, or 149 Mbps on a 622 Mbps port.

(M)
(C) |
(C)(M)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B. Service Elements (Cont'd)

6. Service Classes

(C)

ATM Service logical connections are provided as Constant Bit Rate (CBR), Variable Bit Rate – real time (VBR-rt), Variable Bit Rate – non-real time (VBR-nrt), Available Bit Rate (ABR) or Unspecified Bit Rate (UBR).

(C)

- Available Service Classes as of November 16, 2001

(N)

- Constant Bit Rate (CBR)

CBR supports VCCs and VPCs carrying a constant flow of information (Constant Bit Rate traffic). The Peak Cell Rate is the customer-selected upper limit for cell traffic on a logical connection, which includes appropriate overheads. When cells exceed the Peak Cell Rate for CBR logical connections, the cells are discarded upon entry into the ATM Service Network. The Peak Cell Rate of a CBR logical connection must be less than the speed of the associated port.

- Variable Bit Rate – real time (VBR-rt)

Supports bursty data traffic, with average and peak traffic parameters (e.g. voice and video applications). The VBR-rt is described by values representing a Sustained Cell Rate (SCR) and Peak Cell Rate (PCR). The SCR is the maximum average cell transmission rate on a given VCC. It allows the network to allocate sufficient network resources to guarantee network performance objectives. The SCR applies only to VBR traffic. The PCR is the maximum cell transmission rate (cells per second) per VCC. Maximum Burst Size (MBS) is used to define the maximum number of cells that can be sent at the PCR on an SCR connection at one time.

(N)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B. Service Elements

(T)

6. Service Classes (Cont'd)

- Variable Bit Rate – non real time (VBR-nrt)

(N)

Supports bursty data traffic, with average and peak traffic parameters, which is transported immediately (e.g. LAN and video applications). The VBR-rt is described by values representing a Sustained Cell Rate (SCR) and Peak Cell Rate (PCR). The SCR is the maximum average cell transmission rate on a given VCC. It allows the network to allocate sufficient network resources to guarantee network performance objectives. The SCR applies only to VBR traffic. The PCR is the maximum cell transmission rate (cells per second) per VCC. Maximum Burst Size (MBS) is used to define the maximum number of cells that can be sent at the PCR on an SCR connection at one time.

The Maximum Burst Size (MBS) is the maximum number of cells that can be sent at the peak cell rate on a Variable Bit Rate – real time (VBR-rt) or Variable Bit Rate – non real time (VBR-nrt) connection at one time. Sending a burst at MBS will require the connection to reduce its data rate below the sustained cell rate for a fixed period of time before the next burst can be sent. The maximum burst size levels available are:

- 100 Cells
- 200 Cells

The 100 cell burst size will be assigned unless the customer requests 200 cell burst.

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B. Service Elements

6. Service Classes (Cont'd)

(T)

- Available Bit Rate (ABR)

(N)

ATM layer transfer characteristics provided by the network may change subsequent to connection establishment, suitable for bursty data applications. A Minimum Cell Rate (MCR) and PCR will be applied to facilitate the bandwidth management based on a feedback mechanism.

(N)

- Unspecified Bit Rate (UBR)

(T)(M)

UBR is a best-effort service designed to support a connection carrying information at variable rates, over VCCs. The UBR Service does not provide traffic related service guarantees, specifically, per-connection bandwidth, cell loss, cell transfer delay and cell delay variation. The peak cell rate, which includes appropriate overheads, is the customer-selected, upper limit of cell traffic on a logical connection. The peak cell rate specifies the highest cell rate that will be allowed on a connection, but not guaranteed. When cells exceed the peak cell rate for UBR logical connections, the cells are discarded upon entry into the ATM Network. The peak cell rate of a UBR logical connection may equal, but not exceed, the speed of the associated port.

B. Service Elements

6. Service Classes (Cont'd)

(T)

- Grandfathered Service Classes as of November 16, 2001

(N)

- Peak Cell Rate Service (PCRS)

(M)

PCRS supports VCCs and VPCs carrying a constant flow of information (Constant Bit Rate traffic). The Peak Cell Rate is the customer-selected upper limit for cell traffic on a logical connection, which includes appropriate overheads. When cells exceed the Peak Cell Rate for PCRS logical connections, the cells are discarded upon entry into the ATM Service Network. The Peak Cell Rate of a PCRS logical connection must be less than the speed of the associated port.

(T)

8.5.1 GENERAL

B. Service Elements

6. Service Classes (Cont'd)

(T)

- Grandfathered Service Classes as of November 16, 2001 (Cont'd)

- Sustained Cell Rate Service (SCRS)

(M)

SCRS supports VCCs carrying information at variable rates (Variable Bit Rate traffic). The Sustained Cell Rate is the average cell rate, including bursts above the average, that can be sustained over an SCRS logical connection. The customer selects the bandwidth characteristics of an SCRS logical connection by choosing the appropriate Sustained Cell Rate, which includes appropriate overheads. A customer may also select maximum burst size levels of 32 cells, 100 cells or 200 cells over a SCRS logical connection at a rate equal to a Peak Cell Rate chosen by the customer, or the port speed when no Peak Cell Rate is chosen. However, the average cell rate transmitted for that logical connection must equal the chosen Sustained Cell Rate. The Peak Cell Rate of an SCRS logical connection may equal, but not exceed, the speed of the associated port.

8.5.1 GENERAL

B. Service Elements

6. Service Classes (Cont'd)

(T)

- Grandfathered Service Classes as of November 16, 2001 (Cont'd)

- Maximum Burst Size

(M)

The Maximum Burst Size (MBS) is the maximum number of cells that can be sent at the Peak Cell Rate on a SCRS connection at one time. Sending a burst at MBS will require the connection to reduce its data rate below the SCR for a fixed period of time before the next burst can be sent. The maximum burst size levels available are:

- 32 Cells - accommodating one Ethernet Frame
- 100 Cells - accommodating one Token Ring Frame
- 200 Cells - accommodating one FDDI Frame

The 32 cell burst size will be assigned unless the customer requests a different level. The MBS of 200 Cells will require the customer to purchase a minimum of 4 Mbps of SCRS service for each VCC.

(M)

Certain material previously found on this page can now be found on Page 8-330.

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B. Service Elements (Cont'd)

7. Cell Transfer

(T)(M)

The Cell Transfer service element transfers information between Network Interfaces connected to the ATM Service network at speed(s) selected by the customer for VCCs or VPCs. The customer must designate whether the Cell Transfer for each logical connection is CBR, VBR-rt, VBR-nrt, ABR or UBR.

(C)

The total speed of Cell Transfer elements on a customer's ATM Service configuration may not exceed the associated Cell Transfer port speed (1.544 Mbps, 45 Mbps, 155 Mbps or 622 Mbps).

(C)

8. Central Office Connecting Channel (COCC)

(T)

A COCC provides the ongoing interconnection from the multiplexer or other Company facility port to an ATM Service port when a customer accesses ATM Service via a *QWEST DSL HOST* Port or a private line transport facility which requires multiplexing to be compatible with ATM Service transmission speeds or requires port-to-port connectivity. A COCC may be used to connect a Stand-Alone Optical Access Link to a private line transport facility. The COCC provides connectivity up to 1.544 Mbps, or up to 45 Mbps, or up to 155 Mbps or up to 622 Mbps.

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.1 GENERAL

B. Service Elements

9. 45 or 155 Mbps OAL Protection Option

(T)

45 or 155 Mbps OAL Protection provides added reliability to ATM Service transported over fiber optic facilities. This feature provides a separate facility path within the same conduit, cable, sheath, etc. for the protection system between the Serving Wire Center and the network interface. The 45 or 155 Mbps OAL Protection does not provide for diverse facilities into the building. A customer may request that the facilities used to provide ATM Service be specially routed. The regulations, rates and charges for Special Facilities Routing (i.e., Diversity) are as set forth in Section 11, following.

(M)

This added protection is provided by ensuring that backup electronics and two logically separate facility paths are used in the provisioning of the service. One primary (or working) service path is established between the Serving Wire Center and the customer designated premises. In addition, a protect path is provisioned between the customer designated premises and the Serving Wire Center. In the event that the working facility or electronics fail, or the service performance becomes impaired, i.e., the bit error rate degenerates to less than or equal to 10 to the minus 6, the facility automatically switches to the service protect path in order to maintain a near continuous flow of information between locations.

(M)

The offering of 45 or 155 Mbps OAL Protection contemplates the use of existing facilities. Facilities requiring Special Construction will be provided under Tariff F.C.C. No. 2.

Certain material on this page formerly appeared on Pages 8-330.

8.5 ATM SERVICE (Cont'd) (T)

8.5.2 REGULATIONS

A. General

1. The initial order for ATM Service must be for a fixed period of 12, 24, 36, 48 or 60 months, as set forth in 8.5.4. At the end of the initial service period, the service may be obtained on a month-to-month basis or for any of the specified fixed service periods. Effective November 16, 2001, 72 and 84 month fixed period service rate plans will no longer be available to new customers or for renewal by existing customers. (T)
(C)
(C)
(C)

If an existing customer, with an existing Fixed Period Service Rate Plan, places a subsequent order to add an ATM Access Link at the same customer premises where fiber facilities are currently available, the new ATM Access Link may be initially ordered as month-to-month. (C)
(C)

2. A subsequent order to add ATM Access Links and/or logical connections (VCCs or VPCs) to an existing fixed period service pricing plan must be for a fixed period of 12, 24, 36, 48 or 60 months, or for the remainder of the existing fixed period service pricing plan, provided the remainder of the existing plan is at least the minimum period for that plan, as set forth in 8.5.4.A. If the remaining term is less than the associated minimum period, the minimum term for the added Access Link and/or logical connections shall be the associated minimum period. (C)
(C)
3. A customer may access ATM Service via an ATM Access Link or via Company-provided digital PLTS. A customer utilizing PLTS to access ATM Service does not incur a nonrecurring charge or monthly rate for an ATM Access Link, but does incur a monthly rate and a nonrecurring charge for a Central Office Connecting Channel and all other monthly rates and nonrecurring charges normally associated with the ordering, installing and provisioning of ATM Service, as set forth in 8.5.5. (C)
(T)
(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE (Cont'd) (T)

8.5.3 RATE ELEMENTS

A. ATM Access Link (C)

1. DS1 Access Link (N)

A nonrecurring charge and monthly rate apply per DS1.

2. IMA Access Link

A nonrecurring charge and monthly rate apply per DS1 bundle. (N)

3. Optical Access Link (OAL) (T)

- A nonrecurring charge and monthly rate, both based on the speed of the OAL (45 Mbps, 155 Mbps or 622 Mbps), apply per OAL for each physical connection to the ATM Service Network. The OAL may be optioned with 45 Mbps or 155 Mbps Protection. (C)

(D)

(D)

4. Stand-Alone Optical Access Link (SAOAL) (T)

A nonrecurring charge and monthly rate, both based on the speed of the SAOAL (45 Mbps or 155 Mbps), apply per SAOAL. The SAOAL may be optioned with 45 Mbps or 155 Mbps Protection.

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.3 RATE ELEMENTS (Cont'd)

B. ATM and IMA Ports

(N)

A nonrecurring and recurring charge applies per port based on the transmission speed. ATM Port transmission speeds are 1.544 Mbps, 45 Mbps, 155 Mbps and 622 Mbps. IMA Port transmission speeds are 3 Mbps, 4.6 Mbps, 6.1 Mbps, 7.7 Mbps, 9.2 Mbps, 10.7 Mbps and 12.3 Mbps.

C. Cell Transfer

A nonrecurring charge applies to each logical connection (VCC or VPC) on an ATM Service configuration. A monthly rate applies for the total bandwidth of all logical connections, based on the Service Classes, CBR, VBR-rt, VBR-nrt, ABR or UBR, the number of 64 kbps, 75 kbps 1 Mbps, 1.544 Mbps or 1.787 Mbps increments of bandwidth provided on the connections.

Bandwidth increments of 75 kbps and 1.787 Mbps are only available with the CBR Service Class.

8.5 ATM SERVICE

(T)

8.5.3 RATE ELEMENTS

D. Grandfathered Cell Transfer as of November 16, 2001

(C)(M)

1. A "First" nonrecurring charge per port applies for the first logical connection (VCC or VPC) on an ATM Service configuration. An "Each Additional" nonrecurring charge applies for each additional logical connection ordered on the same ATM Service Port, installed at the same time (same due date) for the same customer of record as the first logical connection. A Cell Transfer fixed nonrecurring charge also applies per port, based on the port speed. A Cell Transfer fixed monthly rate applies, based on the port speed, for each ATM Service OAL, or Synchronous Service Transport (SST), or DS3 connection to the network supporting ATM Service. A variable, or incremental, monthly rate applies per port for the total bandwidth of all logical connections, based on the service type (PCRS, SCRS or UBR) of the connections, the speed of the port and the number of 64 kbps, 75 kbps 1 Mbps, 1.544 Mbps, 1.787 Mbps, 40.7 Mbps or 149 Mbps increments of bandwidth, or fraction thereof, provided on the connections.

(T)
2. Bandwidth increments of 75 kbps, 1.787 Mbps, 40.7 Mbps, and 149 Mbps are not available with SCRS. Bandwidth increments of 75 kbps, 1.544 Mbps, 1.787 Mbps, 40.7 Mbps and 149 Mbps are not available with UBR.

(T)
3. A SCRS Maximum Burst Size monthly rate applies per VCC based on the cell level of 100 or 200. In addition, the Maximum Burst Size of 200 Cells requires the customer to purchase a minimum of 4 Mbps of SCRS for each VCC.

(M)
4. A nonrecurring charge applies for each subsequent order to add or to change logical connections on an existing ATM Service configuration, in addition to the "First" and "Each Additional" nonrecurring charges for the logical connections in the subsequent order.

(T)

5. "First" nonrecurring charge applies for the first logical connection VCC on an LSS/LSS or LSS/ATM Service configuration. "Each Additional" nonrecurring charge applies for each additional logical connection ordered on the same LSS/LSS or LSS/ATM Service configuration, installed at the same time (same due date) for the same customer of record as the first logical connection. A nonrecurring charge applies for each subsequent order to add or to change logical connections on an existing LSS/LSS or LSS/ATM Service configuration, in addition to the "First" and "Each Additional" nonrecurring charges for the logical connections in the subsequent order.

E. Central Office Connecting Channel (COCC)

A nonrecurring charge and a monthly rate apply per COCC, per speed of up to 1.544 Mbps, up to 45 Mbps, or up to 155 Mbps, or up to 622 Mbps. The COCC charges are applicable only if the ATM Access Link is provided by the customer or is provided out of Section 7, 17 or 15.

(C)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE (Cont'd) (T)

8.5.4 PRICING PLANS

A. General

ATM Service must be initially ordered under a Fixed Period Service Rate Plan. (T)
The rate plan allows the ATM Service customer the assurance of no Company- (T)
initiated increases in rates during the fixed period. At the end of the initial service
period, the service may be obtained on a month-to-month basis or any of the
specified fixed period service rate periods.

If an existing customer, with an existing Fixed Period Service Rate Plan, places a (C)
subsequent order to add an ATM Access Link at the same customer premises (C)
where facilities are currently available, the new ATM Access Link may be initially
ordered as month-to-month.

B. Fixed Period Service Rate Plan (T)

ATM customers may order 12, 24, 36, 48 or 60 month fixed period service rate (C)
plans for transmission speeds of 1.544 Mbps, 45 Mbps, 155 Mbps and 622 Mbps
at the rates set forth in 8.5.5, following. Effective November 16, 2001, 72 and 84
month fixed period service rate plans will no longer be available to new customers
or for renewal by existing customers. Rates for existing customers as of November
16, 2001 are set forth in 8.5.6, following. (C)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.4 PRICING PLANS (Cont'd)

C. Terms and Conditions

1. Monthly rates for the entire fixed period will be frozen from Company-initiated increases, at the rates in effect for the fixed period on the service date.
2. The customer must specify the length of the fixed period at the time the service is ordered.
3. ATM Service rate elements may be ordered under any optional rate plan. For example, the customer may order the Access Link under the 36-month fixed period service rate plan and the Cell Transfer under the 60-month fixed period service rate plan.
4. Fixed Period Rate Plans established on or before August 31, 1998, will automatically receive a rate decrease if the Company decreases rates during the term of the plan. Effective September 1, 1998, customers establishing a Fixed Period Rate Plan, will not receive a rate decrease if the Company decreases rates during the term of the plan.

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.4 PRICING PLANS

C. Terms and Conditions (Cont'd)

(T)

5. At the end of the fixed period, the customer may select a new fixed period, convert to monthly rates (month-to-month) or terminate the service. The rates will be those in effect at the time the new fixed period begins. Should the customer fail to make a choice by the end of a fixed period, the service will automatically revert to the effective monthly (month-to-month) rates. If service is continued under the pricing plans, nonrecurring charges will not apply.
6. The minimum service period for fixed period service rate plan is 12 months. When VCCs and VPCs are added to an existing ATM Service, the minimum service period for the added VCCs and VPCs is one month. VCCs and VPCs may be added to an existing fixed period on a month-to-month basis or under the same optional rate plan as the existing ATM Service but at the rates and charges in effect at the time of the addition.
7. Phased-In Installation will apply to all ATM Service customers whose fixed-period service pricing plan began after April 7, 1998.

(T)

(T)

Under Phased-In Installation, monthly rates and nonrecurring charges for all ATM Service elements installed during the first 12 months of a multiyear, fixed-period service plan, or installed at anytime during a 1-year, fixed-period service plan, will be those rates and charges which were in effect on the date the first element of the service configuration was installed; unless a decrease in a rate or charge occurs, in which case the lower rate or charge applies.

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE

(T)

8.5.4 PRICING PLANS (Cont'd)

D. Changes to Rate Plans

(T)

Services rated under the month-to-month plan or an existing fixed period service rate plan may be upgraded to a fixed period service rate plan at any time the customer chooses without incurring nonrecurring charges or Termination Liability. This upgrade will be allowed provided the channel interface and the customer designated premises remain the same. Additionally, the new fixed period service rate plan must meet or exceed the fixed period service rate plan being upgraded.

The monthly rates will be those in effect at the time the new fixed period begins. New minimum service periods apply to upgrades in rate plans.

If a customer chooses to change an existing service provided under a fixed period service rate plan to a month-to-month plan, the change will be treated as a discontinuance of the existing service and an establishment of new service. Appropriate Termination Liability, as set forth in 8.1.5, and a new minimum period will apply in addition to the new monthly rates for the service.

E. Discontinuance of Service

(T)

If the customer chooses to discontinue all or a portion of the service (equaling more than 20% of the total monthly rate) prior to the expiration of the fixed period service, Termination Liability, as set forth in 8.1.5, will apply. A minimum billing level of 80% of the total monthly rates will be used to calculate Termination Liability. The minimum billing level is based on the monthly rate as of the service established date, plus any additions to the service after the service established date.

8. ADVANCED COMMUNICATIONS NETWORKS

8.5 ATM SERVICE (Cont'd)

(T)

8.5.5 RATES AND CHARGES

A. Monthly

ATM Service may be ordered as monthly once the initial requirement to order the service as a fixed period service rate plan has been satisfied.

8.6 LOCAL AREA NETWORK SWITCHING SERVICE

8.6.1 GENERAL

A. Description

Local Area Network (LAN) Switching Service (LSS) is a transport service designed to interconnect LSS interfaces between customer-designated premises. LSS provides a specific amount of bandwidth over the Company's ACS Network using ATM technology. LSS supports both point-to-point and multipoint interconnectivity of Ethernet LANs (i.e., a data rate of 10 Mbps) or Fast Ethernet LANs (i.e., a data rate of 45 Mbps or 100 Mbps). Effective December 14, 2001, Token Ring, 16 Mbps will no longer be available to new customers or for renewal by existing customers.

(C)
(N)
(N)

LSS data is transported over 45 Mbps and 155 Mbps fiber optic access facilities using ATM technology. Company wire centers equipped with ATM technology are identified in the National Exchange Carrier Association Tariff, F.C.C. No. 4.

(T)

LSS connectivity is established by provisioning permanent virtual circuits through the Company's ATM technology. The customer may specify an unprotected LSS transport option which provides a single fiber pair from the Company's ATM equipped wire center to the network interface at the customer-designated premises or a protected LSS transport option which provides a standby fiber pair that is automatically activated if the first fiber path fails. An LSS customer may request Special Facilities Routing as set forth in 11.1.A.1., following.

LSS also supports the provisioning of ATM connectivity between two separate LSS networks and/or between LSS and ATM Service locations. The connection between the LSS/LSS or LSS/ATM CRS locations can be an ATM Service virtual channel connection (VCC). VCCs for the LSS/LSS or LSS to ATM Service option are only available as Unspecified Bit Rate (UBR) for Monthly or fixed period service rate plans of 12, 36 and 60 Months. The VCC and UBR rate regulations and rates are as set forth in 8.5.2 and 8.5.5., following.

8. ADVANCED COMMUNICATIONS NETWORKS

8.6 LOCAL AREA NETWORK SWITCHING SERVICE

8.6.1 GENERAL (Cont'd)

B. Service Elements

1. Network Interface

The Company network interface is the point of interconnection between Company communications facilities and terminal equipment or other customer-provided facilities. The network interface is the point of demarcation on the customer's premises where the Company's responsibility for the provision of LSS ends.

Technical Specifications for LSS are delineated in Qwest Corporation Technical Publication PUB 77396.

2. LAN Link

The LAN Link provides the customer access to the Company's network supporting LSS. A LAN Link includes an NI and the related fiber optic facility. A customer may select a 10 Mbps Ethernet, 45 Mbps Fast Ethernet Lite, or 100 Mbps Fast Ethernet LAN Links. A customer may order Unprotected or Protected LAN Links. Unprotected and Protected LAN Links both provide a dedicated fiber path between the Network Interface and the Company's network. Unprotected LAN Links provide a single fiber path, while protected LAN Links provide a standby fiber path that is automatically activated if the first fiber path fails. An LSS customer may request Special Facilities Routing as set forth in 11.1.A.1., following. An LSS LAN Link is only available in ATM Servicing areas.

(C)

8. ADVANCED COMMUNICATIONS NETWORKS

8.6 LOCAL AREA NETWORK SWITCHING SERVICE

8.6.1 GENERAL

B. Service Elements (Cont'd)

3. Remote LAN Link

A Remote LAN Link is used for LSS access where ATM Service is not available.
A customer may select a 10 Mbps Ethernet or 45 Mbps Fast Ethernet.

(C)

4. Virtual Circuits

LSS connectivity between customer-designated premises is accomplished by provisioning LSS NIs to Permanent Virtual Circuits through the Company's ATM technology.

5. Service Point

Service Points are ATM geographic locations designated by the Company where LSS accesses the ATM technology.

8. ADVANCED COMMUNICATIONS NETWORKS

8.6 LOCAL AREA NETWORK SWITCHING SERVICE (Cont'd)

8.6.2 RATE ELEMENTS

A. LAN Link

A nonrecurring charge applies per LAN Link termination for each physical connection to the Company's ATM technology. The monthly rate is assessed per LAN Link based upon the speed of the LAN Link (i.e., 10 Mbps, 45 Mbps or 100 Mbps) and whether the LAN Link is protected or unprotected.

(C)
(C)

B. Remote LAN Link

A nonrecurring charge applies per Remote LAN Link termination for each physical connection to the Company's ATM technology. The monthly rate is assessed per Remote LAN Link based upon the speed of the Remote LAN Link (i.e., 10 Mbps, 45 Mbps or 100 Mbps). When a customer accesses LSS via a Remote LAN Link, Transport Mileage, as set forth in C., following, applies in addition to the monthly rate for the Remote LAN Link.

(C)

C. Transport Mileage

Transport Mileage rate category provides for the transmission facilities between an ATM-equipped wire center and a non-ATM-equipped serving wire center associated with a customer designated premises. Transport Mileage is portrayed in mileage bands. There are two elements that apply for each band, i.e., a flat rate per band and a rate per mile. Transport mileage is measured as set forth in 7.1.1, preceding.

8. ADVANCED COMMUNICATIONS NETWORKS

8.6 LOCAL AREA NETWORK SWITCHING SERVICE (Cont'd)

(T)(M)

8.6.3 PRICING PLANS

A. General

(T)

1. The initial order for LSS must be for a fixed service period of one, three, or five years. At the end of the initial service period, a customer may elect the month-to-month option or any of the specified fixed service periods. (T)
2. A subsequent order to add LSS LAN Links and/or Remote LAN Links to an existing fixed-period service pricing plan must be for a fixed period of one, three or five years, or for the remainder of the existing fixed-period service pricing plan, provided the remainder of the existing plan is at least the minimum period for that plan, as set forth in 8.5.4. If the remaining term is less than the associated minimum period, the minimum term for the added LAN Link and/or Remote LAN Link shall be the associated minimum period. (T)
3. A customer may access LSS via a Company-provided LAN Link or Remote LAN Link. A customer utilizing a Remote LAN Link to access LSS will incur a monthly rate and a nonrecurring charge for a Remote LAN Link, in addition to the applicable monthly rates for Transport Mileage.

B. Discontinuance of Service

(T)

4. If a customer chooses to discontinue all or a portion of the service prior to the expiration of the fixed period service, Termination Liability, as set forth in 8.1.5, will apply. (T)(M)

8.7 MODEM AGGREGATION SERVICE (MAS)

8.7.1 GENERAL

A. Description

Effective May 1, 2001, Modem Aggregation Service (MAS) is limited to existing customers only. After that date no new or existing customer requests will be taken. All Pricing Plan customers may retain their service until the expiration of their term.

The Company's Modem Aggregation Service (MAS) enables customers to subscribe to the use of modems located within designated Company local calling areas.

MAS shall not be used to provide originating switched voice traffic using internet technologies. When the Company determines that the service is being used to originate switched voice traffic, the customer will be given 30 days to discontinue the unauthorized use. During this 30-day period the customer will be given the option to purchase an applicable switched access product. Failure to discontinue the aforementioned use of MAS will result in its disconnection and in the application of appropriate TLA charges.

For a given local calling area, the service provides to the MAS customer a dial-in phone number and a customer-specified number of MAS ports. The end users of a MAS customer can place any combination of modem (analog) calls and/or ISDN (digital) calls to the assigned MAS phone number within the local calling area, up to and including the subscribed-to number of MAS ports. End-user calls in excess of the subscribed number of MAS ports will receive a subscriber busy signal.

Once the call is connected, the end-user PPP (Point to Point Protocol) traffic is delivered to the MAS customer location over a L2TP (Layer 2 Tunneling Protocol) tunnel using standard Frame Relay Service or ATM Service where these services are available. End user traffic from multiple Company local calling areas can be aggregated onto a single Frame Relay or ATM PVC (Permanent Virtual Circuit).

(T)

8. ADVANCED COMMUNICATIONS NETWORKS

8.7 MODEM AGGREGATION SERVICE (MAS)

8.7.1 GENERAL

A. Description (Cont'd)

MAS requires the use of customer provided equipment L2TP Network Service (LNS) located at the customer's premise to interface with the end user modem traffic that is delivered over the Frame Relay Service or ATM Service to the customer premise. The customer must purchase either Frame Relay Service or ATM Service in order to connect their network to the Central Office based MAS modems. Availability of MAS is limited to those wire centers where MAS and Frame Relay Service or ATM Service is available. The locations designated by the Company are listed in the National Exchange Carrier Association Tariff FCC No. 4.

(T)

(T)

(T)

MAS does not guarantee or warranty the speed or success rate which end users will realize when attempting to connect to the service. Connect speeds and connection success rates vary widely across end user local loops and equipment.

The customer must purchase and install equipment at their premise in order to terminate the end user calls and route them to their end destination. Technical Specifications for MAS are delineated in Qwest Corporation Technical Publication PUB 77402.

MAS customers will receive graphical daily usage reports delivered via e-mail to one e-mail address specified by the customer of record.

8. ADVANCED COMMUNICATIONS NETWORKS

8.7 MODEM AGGREGATION SERVICE (MAS) (Cont'd)

8.7.2 RATE ELEMENTS

A. MAS Recurring Charges

A monthly rate will be applied based on the number of modems to which the customer subscribes. MAS modems are available in blocks of 10. The charges do not include the Frame Relay Service or ATM Service access link, port charges, or bandwidth. Frame Relay or ATM Services are purchased as set forth in Section 8, preceding.

(T)
(T)

B. MAS Nonrecurring Charges

A nonrecurring telephone number charge applies per telephone number when the customer changes their existing telephone number or orders a new MAS telephone number. An order change charge initial or subsequent applies per service order. Changes are only allowed in increments of 10.

8. ADVANCED COMMUNICATIONS NETWORKS

8.7 MODEM AGGREGATION SERVICE (MAS)

8.7.3 PRICING PLANS

Effective May 1, 2001, Modem Aggregation Service (MAS) is limited to existing customers only. After that date no new customer requests will be taken. All Pricing Plan customers may retain their service until the expiration of their term. On December 6, 2000 Pricing Plans of 36 and 60 months were Grandfathered to existing customers. Minimum Service Periods and Termination Liability apply.

(C)
—
(C)

MAS may be ordered at the customer's option on a month-to-month basis or under a Fixed Period Service Rate Plan of 12 months. The optional rate plans give the MAS customer the assurance of no Company-initiated increases in rates during the fixed period. The minimum service period for Fixed Period Service Rate is 12 months as set forth in Section 5, preceding.

When customers with Intrastate MAS existing prior to April 4, 2000 migrate to the MAS offered in this Tariff at the same address of record a nonrecurring charge will not apply and applicable TLA will be waived.
