ACCESS SERVICE

7. Special Access Service (Cont'd)

7.2 Service Descriptions (Cont'd)

7.2.17 IntelliLight® Dedicated SONET Ring (Cont'd)

(A) General (Cont'd)

(1) Terms and Conditions (Cont'd)

Changes in Month-to-Month ports are treated as disconnects and subsequent installations.

When High Capacity Service, NYNEX Enterprise Service, ISSP or IBT is provided between two IDSR rings, the associated ports must be symmetrical.

When a lower capacity service is dropped from an IDSR ring, the associated ports will be billed to the lower capacity service. Lower capacity services may not be dropped at locations utilizing a high speed (pass-through) interface. However, a Channel Mapping Charge will apply for each lower capacity service that originates at and terminates to devices that are not within the partial ring provided by the Telephone Company. The Channel Mapping Charge is billed to the lower capacity service.

When a DS1 service is provided between a DS1 port on an OC3 IDSR central office Node and a channel of a multiplexed 44.736 Mbps or groomed NES DS3 facility, a ThruPath Connection nonrecurring charge as set forth in Section 31.7.9(B)(2) following applies. ThurPath connections at service levels less than, or greater than, DS1 are prohibited with IDSR.

Ethernet services are provided on a point-to-point basis between two suitably equipped IDSR premises nodes. Additionally, VON Gigabit Ethernet (transmitted at 600 Mbps) may be connected to an IDSR OC48 or OC192 enhanced CO Node. The connection of VON Gigabit Ethernet to IDSR will occur via an IDSR GigE-12 port on the CO Node. VON Gigabit Ethernet is further described in Section 7.2.20 following.
